87.75 83.25 TV ch 6 audio & video
88.000 - 108.000 MHz FM Commercial Advertising
108.000 - 112.000 MHz Aviation Navigation (Terminal VOR, ILS)
Currently 80 50 kHz Channels
112.000 - 117.950 MHz Aviation Navigation (VOR)
Currently 120 50 kHz Channels
118.000 - 136.000 MHz Aviation Communication
Currently 720 25 kHz Channels
121.500 Emergency, Emergency Locator Transmitters (ELT), "Guard"

122.700, 122.725, 122.800, 122.925,
122.975, 123.000, 123.050, 123.075 - UNICOM frequencies
122.900 - MULTICOM frequency
123.050, 123.075 - Heliports
122.750 - Air to Air Communications
122.975 - Air to Air Communications for high altitudes (airliners)
123.450 - Air to Air Communications (Trans-ocean get together, etc)
121.600 - CAP practice ELT search (under authorized missions only)
121.700, 121.800, 121.900 - Ground control frequencies.
136.000 - 138.000 MHz Weather Satellite, Government, Business
138.000 - 144.000 MHz Government (Military Bases)
144.000 - 148.000 MHz Amateur Radio
148.000 - 151.000 MHz Government, CAP, CD, MARS
151.000 - 156.250 MHz Business Band (Police, Fire)
156.250 - 157.425 MHz Marine Band
156.800 Marine Emergency "Guard"
157.450 - 160.200 MHz Business Band (Police, Fire)

160.200 - 161.600 MHz Railroad (161.600 is Marine Band)
161.605 - 161.795 MHz Business Band (Radio and V Remotes)
161.800 - 162.000 MHz Marine Band (Telephone)
162.000 - 174.000 MHz Government, Some Business (Radio and TV Remotes)
This is the common "Government Band", frequency spacing
is typically 12.5 kHz, other users are 5 kHz spacing

NOAA Weather is transmitted on:
162.400, 162.425, 162.450, 162.475, 162.500, 162.525, 162.550

935.000 - 941.000 MHz Land Mobile Radio (Base Output)
941.000 - 944.000 MHz Government/Private Shared
944.000 - 947.000 MHz Broadcast Studio To Transmitter Link
947.000 - 952.000 MHz Broadcast Radio Services
952.000 - 960.000 MHz Microwave Relay and Paging
960.000 -1240.000 MHz TACAN/DME, RADAR/IFF, Government
TACAN has 126 X and 126 Y channels. Normally only X channels
are used, unless crowded. TACAN frequencies are tied to VOR
frequencies. (Note: there are more TACAN frequencies than
VOR frequencies, some are blanked around the ATCRBS Beacon
frequencies, and others are for expansion and military use).
Pulse widths are 3.5 microseconds. Aircraft sounds like a Top
Fuel Dragster or Funny Car when searching for lock-on.

Channel VOR Air Ground

17X 108.00 1041 978

29Y and 92Y Favorites for Military Air Refueling (Air-Air)
Check the heavens if active. All Air-Air pairs are 63 Y apart.

29Y N/A 1053 1116
92Y N/A 1116 1053

Air Traffic Control Radar Beacon System (ATCRBS - "At Crabs",
Secondary Radar - to the British)

1030 MHz Ground Interrogations to Transponder
1090 MHz Transponder Replies to Ground

There are currently five interrogation modes in use:

Mode 1, 2 pulses spaced 3 microseconds [Military]
Mode 2, 2 pulses spaced 5 microseconds [Military]
Mode 3/A, 2 pulses spaced 8 microseconds [Military/Civilian]
Mode 4, encrypted, IFF [Military]
Mode C, 2 pulses spaced 21 microseconds [Military/Civilian]

A third pulse is also included in all modes (except 4) at
2 microseconds from the first. This is the sidelobe pulse.
if it's within @6 dB of the first pulse (or greater) the
transponder doesn't reply (as it has detected an antenna
sidelobe). Pulse widths are .8 microseconds.

The reply is two framing pulses spaced 20.3 microseconds apart,
with 13 code pulses (0000 - 7777 Octal) and an X pulse at the
center which is not used anymore). A fourth pulse (called SPI
pulse (Special Position Identifier) is used to identify your
position when asked by a controller to "Squawk Ident", it is
4.35 microseconds after the last framing pulse and lasts for
20 seconds (about 2 scans of a long range radar). Pulse widths
are .45 microseconds.

1575.42 MHz is the Navstar Global Positioning System (GPS)
frequency L1, and 1227.6 MHz is L2.

Is this a good price to buy? Thanks

1642. This NG is apalling

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: Dale Powell <powell@ptialaska.net>
Message-ID: <6oesnn$qh5$1@news.ptialaska.net>
Source record: 152637

As an occasional NG visitor looking for information on the scanners I own, I have found that this NG has very litle to do with informative, useful exchanges, and seems to be more of a forum for personal vendettas, backstabbing, slander, threats, profanity, hearsay, finger pointing, etc. It is even worse than rec.radio.cb

Can't you all just get along?

AL7KB

1643. REPOST: Re: Rogue Cancels in rec.radio.scanner originating from AOL

```
Yes, this is the same IP as Mr Wizzard who left such a putride trail of
filth her on sunday.
All of this infor was forwarded by me to trouble@aol.net....the
appropriate place for this group of IP's

->
-> Can anyone tell me what the law is regarding the intentional
-> interception of cordless telephone calls?

Until 1994, it WAS legal to listen to cordless phones, but the law changed in 1994, and it is now illegal to listen to them.

They're not waiting for "standards" before implementing the new
technology. The officials in my area (Rochester, NY) have been led to
believe that the FCC is going for force them to use digital narrowband
within 3 to 5 years, so they have to replace their entire radio
network NOW. As always, the salespeople at Motorola, Ericsson, et al
are driving the system, not compatibility or public safety or even
necessity.

info

I just checked out the site. Overall, a very nice all-band resource.
However, I should point out that the listings are mainly from Industry
Canada and FCC database dumps and include MANY frequencies that are
outdated and no longer in use. Be sure to check listings published by
local hobbyists, where available, for the most accurate and current
information about actual frequency usage.

This is not to say that license database info is not useful. It is a
springboard for research and education.

Not sure what you mean. On mine, I'd guess the attenuator reduces the sensitivity by 10 - 20%. I'm assuming that when the attenuator is off, it behaves just like those units that don't have the feature.

On Sat, 11 Jul 1998 23:55:00 -0700, Rich <rich96@ix.netcom.com> wrote:

>Do they work? If so, how well?

Sigh. The answer isn't so simple. The best I can tell you is a resounding "it depends."

Most of the time the answer is going to be NO. Particularly if you're working with a hand-held scanner, particularly if you live anywhere near a city, or near a mountaintop which has lots of radio antennas...

The reason is that most scanner listeners live in cities which already have many strong signals in the area. The problem is one of dynamic range. Scanners are designed for very wide-band service. It's expensive to construct a wide band receiver with both sensitivity and selectivity at the same time.

Even the most expensive wide-band scanners can't do better than 80 dB of dynamic range. Most scanners do far less: something in the area of 60 to 70 dB. By contrast, common shortwave receivers can routinely manage 90 to 100 dB of dynamic range and up. This is not because the shortwave receiver uses any better technology than the scanner. The reason is that shortwave radios cover only about 30 MHz with switched octave filters. Scanners, by contrast, have to cover almost 1000 MHz with very few switchable filters.

Now let's place a pre-amp in front of each. What happens? In the case of a shortwave receiver, you usually can see the S-meter read higher, and maybe pick up more signals than you heard before. In the case of a scanner, since you already have loads of signals to begin with, you'll likely cause the first amplifier in your receiver to overload. This will cause a situation known as blocking, where the weaker signals are actually blocked out due to an increased noise floor from all the IMD products caused by too much signal.

That's right, putting a preamp in front of your scanner can actually make it *LESS* sensitive while in the presence of strong signals.

The only exception to this is if you're in the middle of nowhere and there really aren't any strong signals nearby. Then a preamp might actually help.

Usually, though, the scanner receivers are already as sensitive as they can be. Sensitivity is easy to build. Dynamic range is not. You're trying to hear one signal, and the pre-amp amplifies everything. Unless there really isn't much there to begin with (and by that I mean anywhere on the same band), I wouldn't waste the money.

Like you said to me, no dice!

First, I didn't say I posted messages to this newsgroup for two years. Never anywhere did I say that. I was reading some of the posts by OTHERS in order to see what sort of scanner I should get.

The reading of posts is NOT archived or tracked in any way by DejaNews.

Second, the post about the Hair Loss was authored by my dad, James Tonsager. He has two computers at his apartment, and he was using mine at the time of that message.

Third, Steve Halket and I are good friends, and I told him about this, he confirmed it (the Hair Loss message) was from my dad. At the time of message about the $100 handheld PC, I didn't have a job (was "poor" at my standards), and wanted to get one as cheap as possible.

Lastly: Think before you try to humiliate 15 year olds, and once again, get the facts straight!

John's Attempt to Carelessly Kill Any Sense of diginity my Soul has (yes, it can be an acronym):

Didn't work, John! Like you say, "no dice!" I was a bit more "rocky" (more bad behavior on the internet) back in 1997 when I was 13, but I've matured since then.

~~~~~First~~~~~
I wrote:
> I've been on this newsgroup for about two years.

John wrote:
>Wrong! according to Dejanews, you have NOT been on this NG for
>"about two years" as you state. Below is a brief summary of your
>posts in 1997. As clearly shown, you have made several posts in
>computer related newsgroups, but NOTHING in radio related newsgroups.

Incorrect! I didn't say I have been ACTIVELY PARTICIPATING for two years.
DejaNews does not keep track of people who only *browse*. In 1997, I was beginning
to think about getting a new and nice scanner. Finally bought a PRO-64 this April.

~~~~~Second~~~~~

Steve Halket (now a good friend of mine) wrote about me:
>Ever since then, he has spouted off in virtually EVERY email subject
>(even hair loss), usually with incorrect or out-of-date information.
>Now whenever anyone disagrees with him, he threatens to "tell their
>Mommy (or ISP)"!! (see posting #3 below)
> SNIP for preservation of bandwidth

John perorates:
>If anyone wants to see the rest of the post, search for it in
>dejanews.

My response:
Steve Halket mistaked "my" message (about Hair Loss) to be authored by me,
however my dad authored this message. It was written using my computer when I was
visiting him (parents don't live together), and he wrote it under my name.

Like I said earlier, back then I knew less than I do now about how the Internet works,

and I tried to report people left and right. I agree with what Steve
said, he just got the
author of the rather funny Hair Loss message wrong! <g>

Do some more research before publicly humiliating (actually, trying to
humiliate) 15 year olds.

How about a truce, John?

First and regarding the message you found, yes! I will flame people I don't like. I try not to go too far, but at times, I have.

Second, I've NEVER caused any trouble in alt.sys.pc-clone.acer, any of the amateur newsgroups, any of the WorldNet newsgroups, any of the computer hardware groups.

You betray YOUR own words, since the only groups "I've caused trouble in" are this group and the handheld PC group. That would only be TWO sets of groups! Oh my goodness - all two of them out of the over 50 I've interacted with!

Also, take a look at the definitions of these words, taken from the New Webster's Dictionary:

Flame (n) - "intense feeling, passion"
Flame (v) - "to break out in angry passion"
Relevance - "the quality of being closely related to a matter under consideration"

Relevance does not mean directly connected, it only means related. Your existence has little or no connection with mine. You are not required for me to survive in any way, or anything else.

1702. Mackey Resolution

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: Ryan Faricy KC0DSZ <jtonsa@email.msn.com>
Message-ID: <eijziTqr9GA.192@upnetnews03>
Source record: 152720

Very simple: stop posting all off-topic messages. You say you want it to stop? Do so yourself.

When's the last time you've posted an on-topic message?

Try the 160-170 MHz area. It varies from area to area, but they are usually
in this range.

If you need specific frequencies, I apologize. Someone else will surely be
more helpful than I've been!

You certinly are doing a lot of back-peddeling & issueing excuses.

Perhaps you read messages here once or twice, but you certainly
were NOT a regular active participant on this NG so don't try to
you've been on this NG for two years. It just doesn't cut it!

I thought Dave, Andy, and Ken did a wonderful job explaining the nature
of unmoderated side of the USENET. You get quite a bit of the human
nature in an unmoderated NG. Good and bad.

That's why there's so much traffic through unmoderated NG's. You'll
probably just frustrate yourself trying to alter the way others post.
But you can give it your best shot.

But the best advice I heard was for you to use the registered "Agent"
newsreader with filtering. The "Agent" newsreader is quite popular.
The poster that suggested this software also offered to send you his
"filter file". That means if you install "Agent" newsreader software,
another member of this group is offering his custom filter file to wipe
out the vast majority of offending posts of your computer. That's the
way you control what you see on *your* computer screen. Because when it
comes down to it: the only thing you control on an unmoderated NG is
your opinion, and your computer.

You might as well learn it the easy way Cathy.

1713. Van Nuys Air Show Freqs

I believe that is correct. The original story was relatively ambiguous; he did not name names, no one was "slandered" or held up to ridicule. He related much as a newspaper would have done. And we all know that newspaper reporters regularly make illegal use of scanners to get their stories...

Announcing:

."Hamfest INDIA '98".

To be held in Bangalore, South India.

Bangalore, high tech and ham capitol of India, is proud to host this hamfest in the
75th Year of Amateur Radio in India.

1500 hams are expected to attend this three day event. All foreign hams are
welcome and encouraged to attend.

2nd Oct. 2pm Registration.
3rd Oct. 10am Doors open, technical meetings, exhibits, etc.
lunch and dinner included.
4th Oct. Planning meeting and closing of hamfest after lunch.

Activities during the hamfest will include exhibition stalls where
manufacturers in electronics and other related products will
display their wares.

The registration fee is Rs.200/- This is about $5 U.S./

If any one needs assistance booking hotels,
sightseeing trips, etc., we can help.

For more information visit our web site at:

http://www.angelfire.com/in/hamfestindia98/

or contact:

- VU2LU, Ramesh, vu2lu@hotmail.com (India)
- WA5VPW, Jim, jpfin@worldnet.att.net (United States)

73 and hope to see you in Bangalore in October!!

1727. Looking for Salt Lake County Poilice frequency

When the police around here want to say some good stuff, they swith to "Frequency Four". Does anybody know the fourth frequency for Salt Lake County Police ?

Tyson

To reply, please remove the "nospam" from my email address tyson@"nospam"earthling.net

1728. Can trunking be considered a form of Spread Spectrum?

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: pja <pja@pacifier.com>
Message-ID: <35AA9D14.FB1AF8A@pacifier.com>
Source record: 152746

No. Spread spectrum spreads the energy over a pre-determined
bandwidth simultaneously while trunking just hops a common carrier
signal around at a pre-determined code on different frequencies.

Can trunking be considered a form of Spread Spectrum? I ask this
'casuse the transmission & reception can occur over a large chunck of
spectrum.
Thanks

I'm curious how the attenuator feauture would work in trunk mode near
heavy intermod sources, just about the only thing that screws around
with reception on my 235xlt (w/o attenuator) is when I'm near a Nextel
cell tower or other high output array. Would it be a noticable
difference or is 10-20% reduction a marginal difference?

AJ,

Big NO-NO. Thanks to a couple who taped Newt Gingrich & said " Hey,
Look what I did!" and a congress man named Billy Talsman (or something like
that) & an overly protective government, our great hobbie of scanning is
going right down the ol crapper pipes.

A few good bone-heads ruined it for the rest of us & now cordless & cell
phones are on the ever growing list of things that Uncle Sam said " No, you
can`t do that anymore".

In MHO, it is nothing more than a paper tiger. Unless your name is
Goldstein & paint " I`m listening to ypur phone calls" on your front porch,
I don`t think your going to have a problem. If you do, The police in your
neck of the woods have too much time on their hands.

1747. Scanner Commercial On E!

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: H K <hjknitt@execpc.com>
Message-ID: <6oej3o$98j@newsops.execpc.com>
Source record: 152765

On Monday July 13, about 10:15 PM CDT I was watching the "Howard Stern Show" and I saw a 15 second commercial for a scanner.

The sales pitch for the scanner was the fact that it could be used to listen to cordless telephone and CELLULAR telephone calls.

The price was $180 for what looked like a Uniden SC150 and instructions on how to tune in the calls.

How can they sell the scanner with the explicit intent that it can be used to listen to cordless and CELLULAR telephone calls?

hjk

1748. non clip type mic freqs?

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: 'kaptain' <rapture@calweb.com>
Message-ID: <01bdaedd$07d13b00$245dd3cf@rapture.calweb.com>
Source record: 152766

Anybody know freqs for microphones? Not the clip ones, but ones attached to speakers, cassete, or such. It may sound dumb, but there was a guy at a basketball contest prize win thing at CA State Fair last year who was audiable from somewhere around 450-480 mhz, not the 100 mhz range. I think he didn't use a clip mic.

NOPE .....not even........

Good ole oki-900 ....

There is "ABSOLUTELY " no software to make the
nokias do anywhere near the things that exists for the
oki-900 ... nokia can do a lot esp with the IrDA port ...
But hacking wise its a TOTAL FLOP ....the company
has gone to a lot of trouble to make sure of this ....
If you " EVER " fine a program to make the nokia follow
cellular calls (like the oki-900 does) let me , and all of us ,
know .....except for a few eprom loads , there is almost nothing
out about pre 95 nokias (the only good ones) .... the oki-900
on the other hand has volumes of stuff for it ....just ask Kevin M.
for a recommendation ......

see alt.cellular.oki-900 and http:/radiophone.dhp.com/ for
more ....

>not cross-post.

Cathy,
I appreciate your honest effort to arrive at a compromise, but what you're suggesting is to make RRC a moderated newsgroup. Do you have a suggestion as to who would moderate it? Someone would have to be responsible for enforcing the rules, otherwise you would have nothing different from what exists now.

>Would this be a workable solution that everyone could live with?

If that question is a poll of newsgroup users to determine if a majority of subscribers want to change RRS to a moderated newsgroup, please count my vote as "no".

Very best regards,

Yo Mackey de Magnifique! This is to
advise that you're back on my Twit List
with this post.

To do YOUR part in "cleaning up the newsgroup",
all you need to do is refrain from talking
to or about me; avoid referring to or about
me; avoid insinutations about me; and let
on that you don't even THINK about me.

And one other thing: refrain from forgeries,
bogus posts; and rogue cancels.

1767. Overseas scanners for US

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: Ken Fernandez <ferken@mpx.com.au>
Message-ID: <35A9EADA.414BD24A@mpx.com.au>
Source record: 152785

Hello all,

I'm currently in Australia with a Realistic Pro39 scanner that goes from 68 Mhz through the 806-960 Mhz (in 12.5 kHz steps) . I intend giving it to my relative who is going back to the States shortly. After reading some of the discussion threads in this group, I was wondering if this scanner :
1) can be used in the US ?
2) is the frequency range legal there (being that it can receive mobile phone transmission here) ? It does not receive cordless phone frequencies (below the 30Mhz band).
3) does he have to declare it to the US customs as it is a gift (ie a used scanner) ?

Any advice and other suggestions that would help would be appreciated. Thanks.

Ken

Have a look here to see what's available :

http://www.strongsignals.net/htm/manufact.htm

You can then cross reference with this page to pick
the radios with the coverage you seek :

http://www.strongsignals.net/htm/models.htm

You might trot down to Radio Shack and see if they have
any scanners currently being discontinued that meet
your above requirements as well as your price range,
which you did not mention.

You should also consider the newer RELM handheld
units as well; the HS200 and HS100/180.

Good luck!

Two good points...computer control and the CTCSS slot card (not
to mention the others as well). I think the discriminator output
on the data interface jack will also be too tempting for some to
resist as well!

Channel 182= 220.9075
Channel 183= 220.9125
Channel 184= 220.9175
Channel 185= 220.9225

Channels 161-165 Base/Mobile shared
166-170 Base exclusive
181-185 Emergency Medical exclusive

Future 764-776 and 794-806 MHz proposed for Public Safety.

There are proposed refarming and trunking of 150-174 MHz to 12.5 kHz bandwidth and 421-430 MHz, 450-470 MHz, 470-512 MHz to 6.25 kHz bandwidth

There are petitions for 139.0-140.5 MHz and 141.5-143 MHz for Public Safety. That spectrum is currently used by the Department of Defense and the Federal Emergency Management Agency, which will relocate most of their operations by 2008.
There are petitions for 216-220 MHz by 2002.

By way of background, most public safety equipment in use today for voice transmission employs analog FM technology. In the future, however, digital systems will be implemented in the public safety services. Voice encryption is more easily accomplished using digital technology, and systems employing digital technology are being designed to operate effectively in the mobile environment. However, the quality and clarity of digital voice systems for public safety communications, especially on 12.5 kHz channels, has not been subjected to the variety of real world applications faced by the public safety community.

Perhaps the most significant drawback of digital technology in the context of interoperable voice communications is that equipment would have to be built to a not-yet-developed digital standard (i.e., a standard that would require the use

of a common voice coder, digital modulation scheme,
http://www.apcointl.org/project25/p25.html, etc.). Digital standards for interoperability should be developed within two years through "open standards developed/adopted in an open and fair process" to allow for the eventual migration to digital technology. The use of analog FM for voice interoperability will "suffice" perhaps until 2010, but that most users by then will be employing digital technology on their authorized channels and will want to operate in the digital mode on interoperability channels.

As with voice, the transmission of data using digital technology has certain advantages over the transmission of data using analog FM technology. In particular, a greater data throughput can be achieved using digital technology. For example, data speeds for current mobile data equipment using analog FM channels are on the order of 2400 to 4800 bits/sec on a 25 kilohertz channel, while the data rate for equipment using digital technology is as high as 19.2 kb/sec.

In the future will citizens be allowed to buy scanners that decode digitally encoded voice public safety radios?
Is it in society's best interest if governments use radio encryption for dispatch and emergency communications?
Should there be new laws that open governments more to its citizens, now that it is easier for them to communicate in private?

1772. HF Aviation Logs - New York, Santa Maria

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980713184041.23865M-100000@alfa.ist.utl.pt>
Source record: 152790

Hello

Here is another log for New York and Santa Maria Centers.
Very good propagation both on 8825 and 6628KHz.
Some interesting flights:
CS-TEB, routing from Canada, I presume, to Lisbon. An old L1011 of
TAP Air Portugal now operating as Air Luxor.
MON5134, with a very interesting route (to avoid Lisbon ATC?).
Many french companies routing from the Caribbean (AOM, Air
Liberte, CRL, Air France)
If you want to take a look at the airscape above the Azores
Islands at these hours just download:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex10.gif

Ive included also in the shot a part of my All Heard Database
(that lists all aircrafts Ive ever heard) with latest HF insertions.

Best regards, Andre Brandao

Triple Conversion Superheterodyne radios, while they're better than
double conversion radios, are not immune to the reception of other
signals from effects such as Inter-Modulation Distortion (IMD).

All it takes is a really powerful unmodulated carrier somewhere around
100 MHz. This will cause the front end amplifier or the mixer to
distort all by itself and create mixer products just as if you'd
inserted the signal from the LO port.

So the answer is no, a triple conversion receiver won't pick up
cellular signals from *image response*. However, there are other
effects, such as IMD, which can produce the effect you describe.

This is yet another silly reason why the FCC's NPRM on improving image
rejection on scanners is a hopeless cause.

Incorrect. Telling what happened is NOT illegal in any way. There is no proof that this situation didn't or did occur, unless he recorded it, so the law of divulging ANY contents cannot be enforced.

ALSO, and fairly important, it is not illegal to divulge information to anyone that HAS a scanner and/or to those who were able to listen in to the situation in Atlanta (or any place, for that matter), should they have been there.

Divulging the true and entire contents to otherwise "non-scanner people" *would* be illegal, however that would require taping the scene and playing it to others. In this case, he could have uploaded a WAV file with the entire thing. That would have been illegal, but he didn't do that.

He should be ashamed to admit something that wasn't true . . . It's called
"lying", or not telling the truth.

And you're right, truth is truth, but you have no knowledge of what truth
really is.

A rather simple thing called Intermod (IMD) causes this. It basically overloads the front-end of the scanner's receive circuit, and screws it up, and that "causes" the images.

If I am near a bunch of metal (downtown, usually), I am usually able to hear cell phones at 50-54 MHz.

BTW: I've got a PRO-64 also.

I don't know what resources you have in the Netherlands, however, here
in the US, anyone can go to an airfield, bookstore, or government
printing office and purchase a copy of the Airman's Information
Manual. It is a publication of the United States Federal Aviation
Administration. This book describes in very clear details and
pictures, standard practices on flying aircraft, including extensive
chapters on radio communications practice nationwide.

How much applies to Europe, I don't know. However, since very few
Europeans learn how to fly in Europe (most private pilots train here
in the states because nearly all European governments have made
private aviation outrageously expensive), I'd expect that most of
what's written in our books also applies to Europe.

Good Luck.

This has been going on for as long as the general public has had access to the Internet. It gets worse all the time as new people with no clue as to netiquette (or even general good manners in real life) get computers and modems and join the party. There is no real solution except to configure your own software to filter out the undesirable stuff, or to learn to read subject headers and skip what looks irrelevant.

As you may have noticed by now, every single off-topic article immediately collects a seemingly endless chain of replies, which will degenerate into a barrage of name-calling and useless traffic. There's no point in posting public complaints, it just adds to the noise and clutter. Just read the stuff that interests you and skip the rest. There really is some useful information posted in these newsgroups from time to time.

Blake,

Thats all well and good However "Scancat" is Copyrighted
and Protected by Certain laws.

I am Not saying that bill did anything wrong, but as a good business
practice a company should protect it's good name to prevent
Misrepresentation. i mean if i was to flame a guy and cause him harm
under the name Blake Bowers that would be Misrepresentation. Correct? and
cause you alot of grief and if you were doing business would that not
probably cause your Business Harm?

Just Trying to look at the other side of the coin.

Jason

Nice analogy Andy ... I like it here to and yes I have been guilty of flaming Mackey. It is fun to whack the Mackey once and awhile. I do believe we have a problem here in this newsgroup, but as to how much of a problem ... that subjective. I learn here and hopefully I am able to give out some useful information from my experiences.

I guess you have to take things here with a grain of salt and not get to upset or just don't read the threads you dis-like. I know this is not the solution but at least it's a start.

Bus station logic ... very good ... <g>

Dan Kaufman wrote:
> What is unicom in the aircraft band?

It's the frequency used at smaller airports without
towers. Useful for all aircraft in the area to report
their positions.

The common freqs for UNICOM are 122.7, 122.8, 122.825,
128.85, 122.9 and 123.0.

You'll also hear 122.9 used for MULTICOMM which is
similar in function.

Most airports with towers have a a UNICOM or CTAF
frequency for use during off-shift hours.

That's quite different from what you said in your other post on the subject, which was that you didn't care if you were reported to your ISP because you were changing to another ISP. Big difference, dipwad.

Sorry! www.strongsignals.net it is...

Personally, I would also give the AOR 8000 a hard look in addition to the AOR8200 and the Yupi 9000. Ultimately, the decision for me comes down to ease of use and with computer control the AOR tips the scale. The appealing thing about the 8200, however, is the CTCSS add-on card, another "must have" option, I think.

Ari -

Many (but not all) 800 MHz systems are trunked. Trunking lets a large system share a number of channels under computer control. Conversations can hop from channel to channel. You can monitor trunked systems with an ordinary 800 MHz scanner, but a trunktracker will follow the conversation as it hops, making for more pleasant monitoring. A trunktracker will also let you lock out the water meter readers and school bus drivers so you won't have to listen to them. <grin>

122.0 is in fact correct for the FSS Flight Watch Freq. However you must also remember that it is for Aircraft below FL180 (18,000ft). To listen to aircraft above that altitude you would have to look on a Hi alt IFR chart or contact your local FSS and they could tell you.

How about a compromise?

The people who think it is fun, entertaining, sexually stimulating, etc. to fight, bicker, finger-point, accuse one antother of atypical sexual acts, whine, cry, participate in name-calling, throw insults, cancel others posts, use multiple false email identities, etc. use ALT.RADIO.SCANNER, and not cross-post.

The people who would like to post questions, answers, information etc. about scanners and scanning related topics use REC. RADIO.SCANNER, and not cross-post.

Would this be a workable solution that everyone could live with?

I really don't know who participates in the problem and who is real or made up email addresses or who is "right" or who is "wrong" because I don't follow all the bickering. It is just so much trash and garbage in the street, to step over or walk around. I am just asking that the excessive littering be stopped.

Thank you all, in advance, for your consideration of this proposal.

CATHY

Bill,

No one ones a nickname here on the Internet. The name is followed by
your provider, so no one has the "Same" name, ie there could be
another Bbowers@somewhere.com. If someone tried to force you
to change from using
"Scancat@mailexcite.com", and you were the first to use the ENTIRE
name, then they have no rights to that name.

Cathy,
I appreciate your articulate comments, and the time and thought you put into them. I'm sure I'm one of those posters you wish would go away, and I doubt you'll consider my suggestions helpful. Nonetheless, I'll try, with the same sincerity that was obvious in your post.

cdeviney@ipa.net (Cathy De Viney) writes:
>I think 99% of the people that use the two scanner news groups are
>sick and tired of the non-scanning related fighting.

I would have to question the basis for your conjecture. If you have valid research that backs this up, I'd sure be interested in seeing it. If not, I'd have to respectfully suggest that you're starting with a faulty premise. I have no doubt that you are sincerely expressing YOUR feelings, but I would caution you against assuming that such a large majority shares your feelings without being able to substantiate the claim.

> I am at a loss as to what to do about it.

You have three options, which, believe it or not, I offer in all sincerity and in a genuine attempt to help. (1) Don't read the posts whose subject lines CLEARLY identify them as not being related to scanning. (2) Obtain a news reader which allows you to configure the software to filter, or "killfile" by name, subject, whatever - automatically. (3) Unsubscribe.

>Is there a person "in charge of" a newsgroup that could just delete
>all those as they come in?

There is at least one person who posts here who would LIKE to be in charge of these newsgroups, but it just doesn't work that way. Yes, there are moderated newsgroups around, but these two don't happen to be among them. For the most part, Usenet is a wide open free-for-all. Like it or not, it is what it is. I am most familiar with AOL, since it's my wife's service of choice, but I expect that all of the ISPs and online services have, as AOL does, "rules" about the content of what passes through their portals, including newsgroup posts. The problem with enforcement comes when you try and make a determination of what constitutes a "flame" or a "nasty comment". As has been evidenced by some of the posts on these scanner NGs, what some people are bothered by, others find entertaining. So, who decides which it is, and what to do about it? Each one of us who subscribes to these or any other groups. You and I and everyone else here has to decide whether we can accept what's here, and the options for dealing with it if we don't like it.

>What about, if everyone uses a comment like:
>"I found this post non-productive and/or off-topic" and the hundreds

>if his/her mail box filled up with this comment.

Yes, but that borders perilously on mail-bombing, which is very much frowned upon by all of the online services and ISPs that I'm familiar with.

>Does anyone know what can be done about the few ruining these
>newsgroups for the many? Please post your helpful suggestions.

You see the glass half empty, I see it half full. I find a lot of very useful scanner related information on these two newsgroups, and would hardly consider that they have been "ruined". Yes, there are off-topic posts and, yes, I've authored my share of them. I've also participated in numerous threads that epitomize what I think we would all consider the "perfect" group - asking and answering questions, exchanging ideas, sharing experiences. In Utopia, both groups would be full of ONLY those posts. Here in the real world of RRS and ARS, it ain't gonna happen. I hope you can learn to accept that and stay and enjoy what you consider the good parts, and just ignore me and the others who offend you. I'd hate to see you leave, but that, too, is your choice.
Thanks again for your comments, and for accepting mine in the spirit in which they were intended.
Very best regards,
Dave, K4CC

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Woke up this morning with an urge to buy a new scanner, so armed with the stock numbers from some of the more desirable radioshack models, off I went.
I arrive at radioshack #1, what do I find but a cache of the famous $12 pro-508 scanners, and like 10 pro-28's might have been 29's no matter didn't want any more junk so I went to the counter and had the drone type in the #'s I had brought since they are incapable of finding anything that's not in the current catalog. Well he gives me the bad news, or so I thought..no scanners, no $4 discones.
I almost gave up, but as luck would have it I passed another shack on the way home and decided to stop in, well I guess the salesman at this

one actually knew how to work the computer because, YES!! one 20-309 left in South Florida, maybe the world..only six miles from my house at a mall radioshack!!! Go figure, what else did they have but 4 older discones for $4 a piece. Yahoo! What a scanner the pro-60 is, it's like a handheld 2006!!! I highly recommend it, especially at the low low price of $69.99!!! Three cheers for RadioShack!!!!!!...Today anyway...
For a laugh I had them try to find me a 20-145, what a day it would have been if they had one...

>from posting for 30 days?
[snip]

There is no "Commissioner of Usenet". There is a group of people
(sysadmins mostly, I think) who you'll find on news.groups who determine
which "big 8" groups exist. But they don't control posting.

The only external control that exists is if somebody becomes sufficiently
abusive that their ISP cancels them. Before the net became commercial,
and access was via universities, laboratories, freenets, etc., people did
get their access yanked. These days, even if an ISP did cancel somebody,
new accounts are as easy to get as buying a loaf of bread.

>What about, if everyone uses a comment like:
>"I found this post non-productive and/or off-topic" and the hundreds
>of us that use the scanning newgroups just hit the "reply to sender"
>button with the above comment? Surely the offender would get the hint
>if his/her mail box filled up with this comment.

Unfortunately, replying to wasteful posts adds to the clutter. And
filling somebody's mailbox (the ultimate is mailbombing, which you're not
advocating) tends to hurt other users on the abuser's system.

I think the biggest offender(s) here know exactly what he (they) is (are)
up to. Embarrassment won't help.

If the clutter gets to you, the only real choice is a threading news
reader and/or a kill file. I've got a problem with using a kill file for
the most famous pair of clutterers, since one of that pair is a very
high-content poster when he's not reacting to the other.

Speaking of that pair (I won't name names), I wonder if they ever heard of
the parable of the two farmers and the one lane bridge?

Two farmers found their pickup trucks nose to nose on a one-lane
bridge. After fuming for a while, and traffic backing up on both
sides, one declared "I will never back up for an idiot."

The other one replied "That's OK - I will." He put his truck in
reverse. The bridge was cleared, and everybody got on with their

business.

One of our pair has come so very close to backing out of it for the sake of us all. Hope he can pull it off for good.

If you intend to use only the Icom software go for it. It IS a nice radio. But their software isn't nearly as feature rich as I had imagined it would be. And Icom seriously discourages use of third party software - even stating if your radio dies the EEPROM death, they won't warranty it.

And Icom steadfastly refuses to release any documentation on the command protocol needed to control the radio.

Good luck.
John

I have a crystal Scanner, 16 channel capacity by Tenelec. It is called
a Tennetrac IV. Has conrrols for volume, squelch,scanrate, tone, scan
/ delay and local / distant rockers. Serial #1335678. Condition is
bout 8 out of 10. I know it works as I had one crystal for my local
department and it picked them up fine. It has the original antennas
(seperate vhf & uhf). I aquired this unit and although it is nice
I am limiting my crystal units to Bearcat III's and right now, i have
a couple two many of those. I believe there are followers of this type
unit out there as it is frankly a pretty nice radio.
I would like to make an even trade for a realistic HTX-202 or HTX-404
with all original accessories (charger / ni-cad pak / AA pak / Duckie
antenna. Manual and box/packing items would be nice but not required.
Radio should be in an 8 out of 10 condition in cosmetics and
operation.

Or what have you?????????write and lets talk.

Have a nice day.

Yup, that's how you twist and warp things
for your own purposes. You failed to add
that I said I'd invoke and revoke my
"deal" as I saw fit until such time as
you accept it.

You failed to accept it, and then went off
on forging and rogue-canceling missions, so
I came back to frappe you upside the jowls
to make your lips go "blippety blippety blip blip blip."

All you gotta do is not talk to or about me,
nor make inferences and references to or
about me, and not even let on that you
think about me, and the deal will be etched
into the granite of eternity.

You friggin nincompoop.....

Oh. But since you don't know the meaning
of "truth" and have no concept of the differences
between synonyms and antonyms, your statement
is about as relevant as your love for scanners
and scanning.

> YOU pursue ME!

Ha ha ha ha ha ha ha ha ha ha ha ha ha ha......

You flippin horse's ass.

> You put me in your killfile for a day
> or two then you take me out of your killfile because
> you are so obsessed with me.

You get off thinking that, don't you? Well,
I tell you what, camelbreath, come tomorrow
when I slap you back on my ShitList, all you
gotta do to see if you're right or wrong is
to NOT talk to or about me; nor infer or
refer to or about me, and let on that you
don't even think about me.

So long as meet those five conditions, you'll
remain.....gone.

> Remember the "Billy Thunder" posts

No. And I am not him, you dumbshit.

> or the "WinRadio" posts? YOU were caught red handed!

No, asslick, I FIRST clarified that to someone
else, after which YOU whooped it up and tried
to create that dumbass illusion....even like you're
doing again now. You even recently accused me of
being Hong Fong Tung or something like that.

You idiotic mongoloid nincompoop.........

Ahem.... ummmm.....Hermie? Anybody home?
Knock knock? Yo Ignats, wake up!

You haven't made ANY on-topic posts, even if
you claim an exception. One or two token efforts
hardly constitutes a capability to say that you
"post on-topic".

You don't. And the track record bears it out.

BTW, what did it feel like when you stuck the
antenna port of a Henry 2-kW up your patooty
and keyed the mic?

Sources say you did a heap of yelping........

You flippin masochist...........

I have a Bearcat BC200 XLT handheld scanner that has been modded for
cellular. It comes with the scanner, AC adaptor/charger, ni-cad
pack, rubber duck antenna, and a leather case. $150 takes it.
Please contact me at 818-882-0101 after 6PM PST or email me at
jerw@usa.net
Buyer must prepay if shipped, or pick up in person.
I am in Canoga Park, CA (near Los Angeles).
Thank you.

Why waste your time? If he bothers you so much, learn how to use a
usenet filter. There are many free newsreaders that support this
option.

1898. Communications Privacy -- the law

Newsgroup: rec.radio.scanner
Date: 1998-07-13 00:00:00 UTC
From: ajmedia@aol.com
Message-ID: <1998071305254400.BAA27311@ladder03.news.aol.com>
Source record: 152916

Can anyone tell me what the law is regarding the intentional interception of cordless telephone calls?

I wrote an article for a local magazine on the subject a couple of years ago, and I received conflicting answers. First, Bob Grove ("Monitoring Times") informed me that the Electronic Communications Privacy Act prohibits the listening of any communications device connected to a wire or cable-- namely telephones. However, an official with the FCC told me that eavesdroppers can legally listen to cordless telephone conversations, but laws prohibit them from divulging the contents to anyone other than the person whom they listened.

Additionally, I was perusing a congressional home page and came across the Wireless Privacy Enhancement Act -- "to strengthen and clarify prohibitions on electronic eavesdropping." -- which seems to outlaw the modification of scanners for eavesdropping puroposes..

Thanks in advance for setting me straight.

Rox,

>I've been saving my pennies for this new ICOM PCR1000, but now I'm a
>little fearful after reading about problems the "programming types" are
>having.

You are right in having these worries. You will not see any 'official' 3rd party support for this radio in a very long time, and if you do, it will probably be from programs costing over $150, as there is no point in having to pay for a protocol so that you can release a freeware program. As it stands, you can use the radio, but you will be very limited.
You cannot link banks or channels, so in effect you are left with a $400 50 channel scanner, not 'unlimited' as they advertise. The interface is also very hard on the user, just try it, you can download it from www.icomamerica.com/receivers/ and see for your self.
Try to use the software for 10 minutes without thinking something 'nice' of the programmer that made the thing...

>Are there any regular Joe's who are using this with no problem? I'd like
>to know if there are any good reviews.

Try the one at www.strongsignals.net

>Also, I see that some scanners can be purchased from Canada, cellular
>unblocked. Has anyone ordered one of these with no hassles?

No idea, I'm from Barcelona, Spain. There is a mod, though.

Mike

BTW the conclusion really is to wait for the Optoelectronics OptoCom or the Winradio 1500, both PC-driven radios, with the exception of the Opto that can also be used as a standalone, and has trunktracking capabilities.

See them at

www.optoelectronics.com
www.winradio.com

I assume you are talking about an outdoor television antenna. Yes, you can attach it to your scanner and it should work fine. TV antennas are usually directional so you will have to be able to rotate the antenna toward the signal source. TV antennas are also designed to receive in the horizontal plane. Most of the radio signals you will want to monitor on a scanner are vertical. This means that the TV antenna will work better if rotated 90 degrees. You will probably need to drill a couple more holes to do this. You should be able to use RG-6 coax cable with an adapter to fit your scanner. Don't worry about the minor mismatch of impedence.

A wild guess: Could your phone and/or recorder be picking up cell phone conversations? That could explain the sudden drop-outs (due to hand-off to a different cell), and why you only hear one side of the conversation. Do you live near a cell tower?

Just a possibility. There are probably many more equally- or more-likely scenarios.

Tiny (& worthless dead-beat dad) Tom Sludge Skybuzzard,

This was only mildly amusing the first five or six times you posted this crap. Come on man(?), Steal some NEW material. (or fire the writer you have now)

You`re just pissed that everyone knows the truth `bout your sorry ass. Hey man, thats life. Get use to it. What do you expect when you pull the same crap since at least 1996 in a couple of dozen ng`s? Sooner or later, someone`s gonna smack yer hand & you ain`t gonna like it. Too bad kid. It ain`t like we didn`t warn ya.
The only thing that you get outta doin` this, is that SOMEONE gives you SOME attention, good or bad, at least it`s SOME. Maybe if `n you hadn`t treated yer EX like crap, she & the kids would still be living under the same roof with you.
I`m not gonna play with you any more. You don`t deserve any more attention. I`m giving you a permanent "time out". <CLICK>
Boy, you REALLY messed up yer life, didn`t ya?

Live with it. At least your EX has found someone who treats her like the woman she is. (& makes her scream in bed too) Good for her !!! I hear the kids like him too !!!

Have a lovely day, 8>)
Charlie

P.S. *PLONK* (I forgot to do this the other day)

I just bought a Q7A and I'm interested in any mods or test modes to restore cellular frequencies. I am also interested in any info on a computer control interface for this radio. There is a rumor that one exists. If you have any info, mail me or post it here.

My e-mail address is mattvirus@navix.net

Thanks, Matt

1914. Icom IC-R1 Belt Clip - help!!

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: PaveHawk <saturn@ix.netcom.com>
Message-ID: <35AC3066.1C91@ix.netcom.com>
Source record: 152427

Hi Folks!

Lovely newsgroup!

I was wondering if anyone could help me at all. I have an Icom IC-R1 scanner, which I have brought along with me to the US from Australia. The deal is that somehow, I lost my belt clip and two adjoining screws. Having tried a number of old and new mobile phone pouches, I still am not able to carry around my scanner in a convenient fashion.

Therefore, I was wondering if anybody online could point me in the right direction to obtaining the original belt clip and screws. Icom seems to be out of reach as far as customer service goes, and no electronic shops seem to want to help me out!

Any ideas would be greatly appreciated. Please feel free to email them to saturn@ix.netcom.com

Thanks in advance, and happy scanning!

Phil.

Nick, This may answer your questions.

Using TV Antennas with Scanners
By Richard Kendrick CET, N7NT

All Rights Reserved

OVERVIEW

Finding and obtaining suitable antennas for general scanner use has been a hot topic for a long time. There has been a storm of controversy surrounding television antennas and their suitability for scanner use. This article will show that television antennas can be a suitable and cost effective solution as a general-purpose directional antenna for your scanner station.

Television antennas come in a variety of sizes and designs, with equally wide variety of specifications. This diversity causes confusion for the scanner listener trying to sort all this information and find a suitable antenna to use. The number of elements and what frequency range to buy are probably the two most common questions.

Generally, the more elements on an antenna, the better the performance. If the stations you are trying to hear are more than 25 miles away, the larger antenna arrays would be a good choice.

BASIC DESIGN OF TELEVISION ANTENNAS

Most TV antenna designs are based on the Log Periodic Dipole Array, or LPDA. The LPDA is similar to a Yagi in construction and appearance, with the main difference in the elements and how they are connected. The LPDA has a series of progressively smaller "active" elements placed on a boom where the longest element on one end, and is a half wavelength at the lowest frequency. The shortest element is on the opposite end, and is a half wavelength at the highest frequency of interest. The end of the antenna with the shortest elements are pointed towards the target transmitter.

The chief benefit of the LPDA is the wide frequency range over which it can be operated. Typically, the antenna can be used over a range of frequencies having a ratio of 2:1 or higher. The main electrical characteristics of feed-point impedance, front-to-back ratio, and gain remains more or less constant over this range. This is not true, however, of the Yagi antenna.

For the LPDA to be useful as a TV antenna, it actually needs slightly more bandwidth above and below the standard TV channels. That additional bandwidth, or overlap, can be utilized by the scanner listener to squeeze just a little bit more frequency coverage from the antenna than the designers originally envisioned.

FREQUENCY COVERAGE

The frequency range of the antenna you choose depends on what segments of the frequency spectrum your listening will focus on. Antennas are available that cover the VHF channels only, the UHF channels only, and, of course, the VHF and UHF channels. Many models also include the FM standard broadcast band. For the purpose of this article, it will help to define exactly what is meant by VHF, UHF, and standard FM broadcast bands with respect to frequency.

The frequency assignments for the television broadcast band is not a continuous span. The VHF range is specified as channels 2 through 13. Channels 2 through 6 cover the 54 to 88 MHz range and channels 7 through 13 span 174 to 216 MHz. Sandwiched between channels 6 and 7 is the FM broadcast band covering 88 to 108 MHz. Channels 14 through 83, the UHF range, is 470 to 890 MHz. In recent years, the spectrum covering channels 70 through 83 have been reassigned to the Land Mobile and Cellular Services.

View the TV antenna as a device that covers three separate frequency ranges. Based on the nominal bandwidths of a video signal, the three frequency ranges are 54 to 108 MHz, 174 to 216 MHz, and 470 to 890 MHz. Depending on the antenna, the lowest range covers approximately 50 to 112 MHz, yielding a frequency ratio of 2.24:1. Since the center range has a ratio of 1.24:1; it typically would cover a much wider spectrum. By keeping the 2.24:1 ratio, we could expect a frequency range of approximately 120 to 270 MHz. Design tolerances would fill the gap between 112 and 120 MHz making this range useful, too. The highest range has a frequency ratio of 1.89:1. Keeping with the 2.24:1 ratio would give a useful range of 420 to 940 MHz.

POLARIZATION OF TELEVISION ANTENNAS

The last criteria that must be addressed is the orientation, or polarization of the antenna. TV antennas use horizontal polarization and the type of stations scanner enthusiasts monitor have vertical polarization. Horizontal polarization is where the antenna elements are parallel with the surface of the earth and vertical polarization is where the elements are perpendicular to the Earth's surface. TV

antennas are designed for horizontal polarization and might require modification for scanner use.

FEEDING THE TELEVISION ANTENNA

There will be no significant performance loss if you use 75-ohm coax and a TV type 4:1 balun. Just choose a good grade of coax with good ultraviolet resistance. Even though many scanner radios have a 50-ohm antenna input impedance, the nominal SWR (1.5:1) is not a factor for receive only installations. The SWR will vary widely of the intended frequency ranges and will never be optimum. Yes, there is a small amount of loss, but the loss is negligible. You still have the option of using a 6:1 balun and 50-ohm coax also.

MOUNTING AND MODIFICATION OF TELEVISION ANTENNAS

Whether or not the TV antenna needs modified, is based on the type of mast used to mount the antenna. Reorienting the antenna in a vertical fashion puts the mast right in the center of the antenna elements. The presence of the metal mast parallel to the field of the antenna elements would distort the radiation pattern and degrade the overall performance of the antenna. Using a wooden or fiberglass mast solves this problem. If you use wood, some form of weather proofing will be needed in certain parts of the world.

Mounting an antenna with the mast in the field of the elements will require the antenna to be physically modified. Fortunately, the modification is very simple. Most TV antennas use square tubing as the boom. Locate the two mounting holes for the u-bolt clamp and drill two 9/32 inch diameter holes 90 degrees away from the existing holes. Be sure to keep the same center to center spacing so the clamp will pass through the holes comfortably. Depending on the antenna you chose to modify, you might have to move the location of the mounting holes forward or backwards one or two inches to clear an element or the feed system.

If you choose not to modify your antenna, you will need to mount the antenna about a foot from the mast. This will make the mounting more complicated mechanically. Either method will work because neither one is superior to the other. It will depend on what materials you have to work with and your budget.

CONCLUSION

Using a television antenna in a scanner monitoring station offers a reasonable cost to performance trade-off for the scanner listener. You get coverage of the 50 to 270 MHz and 420 to 940 MHz frequency ranges, high gain, good front-to-back performance, and directivity using standard inexpensive TV rotator systems. Obviously, not all antennas available will perform the same in all locations. But for the price and ease of use, the television antenna will provide many happy scanning hours.

1916. Navy Q and Z signals

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC

Does anyone have a source for the military (navel) q and z signal codes.....
(i.e. zbz=readablity of my signal; whereas int zbz = what is the readablity
of my signal; and reply might be zbz 5by5 (I read you perfect))

Anyhow, there is pages of 3 letter q and z codes.... does anyone know where
I can get a copy of them? I know there was an old Navel DOD pub for it...
don't remember title or number, though.

Austin Frequencies

155.370 DPS Austin (Trunked system so you'll only hear the dispatcher)

The DPS DOES NOT now use a trunked system. It uses very large towers, lots
of them and simplex. The CORRECT DPS frequencies are:

155.370 Intercity Base (every PD in TX has this freq)
154.950 Intercity Mobile (everyone who has anything to do with
law enforcement has this; including
customs, game management. The "channel
19" of TX Police band radio. The lets
go to lunch frequency; lots of chit-
chat; used in multidepartment support)

154.680 Mob to Base - simplex; you need to be close to the DPS vehicle
155.460 Base to Mob - simplex; easy to hear
154.695 Simi-duplex - not use much
155.505 Intel/Narc-Statewide (busy; usually scrambled)
157.350 Dallas North Tollway - not relevent to Austin
159.090 Mobile relay - not used much

Barry D. Chalcroft / N5NWI
EMAIL: barryc@mpd.tandem.com bchalcroft@delphi.com
76500.2177@compuserve.com barryc@cactus.org

Here's the APD freqs:

460.400 Frank sector (APD channel 1) - Southeast Austin
460.100 Adam sector (APD channel 2) - Northwest Austin
460.450 Baker sector (APD channel 3) - Central/West Austin
460.325 Edward sector (APD channel 4) - Northeast Austin
460.175 Charlie sector (APD channel 5) - East Austin
460.275 David sector (APD channel 6) - Southwest Austin
460.025 Info/Tac (APD channel 7) - Info / Tactical - Citywide
460.500 Info/Tac (APD channel 8) - Info / Tactical - Citywide

155.580 Univ. of Texas P.D. - (I haven't confirmed this freq...)

155.370 DPS Austin (Trunked system so you'll only hear the dispatcher)

Hope that helps!

Steve Gibson

Subject: Oahu, Maui & Molokai freqs!
From: dabasap@netcom.com (Greg Griffin)
Date: Sat, 4 Jun 1994 06:25:18 GMT
Message-ID: <dabasapCqv0IG.J9I@netcom.com>

These frequencies were monitored during two vacations, October 1993 and
May 1994.

OAHU BUSINESS:

Hilton Hawaiian Village
Honolulu, Hawaii
461.65 Banquets
462.175 Housekeeping
462.8 Pager
463.8 Security
464.425 Registration
464.825 Maintenance
464.875 Security

Ala Moana Shopping Center = 463.8, 463.85
Bishop Museaum = 461.2875
Royal Hawaiian Shopping Center = 461.85
University of Hawaii, Manoa = 464.1
Windward City Mall = 461.125

156.975 Marine Channel 79: Atlantis Submarine Fleet!
DISCOVERY, ELANUS_10, SURFACE_CONTROL, ATLANTIS_9
ATLANTIS_10, ATLANTIS_14, ATLANTIS_CONTROL
Stern Tiller Full Port
Surface Comm Check
Hatches Shut
Clear to Vent and Begin the Dive
Start Dive Sequence
Switch to Underwater Telephone
Decks Awash

457.55 Hawaiian Dredging Company -- Big Crane Frequency. This is the
construction company that is working on the huge Hale Koa
Expansion (a military recreation facility adjacent to
the existing Hale Koa Hotel, right next door to my hotel,
the Hilton Hawaiian Village, Tapa Tower). This frequency
took me a long time to puzzle out. I was so frustrated
because I could see all of the construction site, and
through binoculars I could see workers speak into walkie

talkies to talk with the big crane operator. I searched
460-470 VERY carefully, and nothing! Finally I plugged
in every IS frequency that my old Police Call listed!

464.1875 R Atlantis Submarine Phone Patch!! Much behind the scenes
radio traffic; From my hotel room on the 33rd floor,
I heard both sides of the phone patch on what should
have been just the "input" frequency: 469.1875.

464.675 R (* unknown business, but this was a fun frequency to listen
to the locals "talk story" -- I don't think I heard any
business transacted, just chatty gossip! Good fun! *)

860.1375 R Phone Patches -- Cindy from Motorola calling a customer,
other companies using the phone patch, and some non-English
languages.

OAHU PUBLIC SAFETY, heard from the 33rd floor of Hilton Hawaiian Village,
Tapa Tower:

154.28 Fire Dispatch, KDP337 (?)
154.49
154.68 test-1-2-3-4; ROOM BUG FREQUENCY on 5/31/94 at 9:45pm.
You got the money?
May I see your flight ticket, so I know you're not a cop.
Yeah, you're not a cop.
(* the prostitute never came out and asked the officer
directly: ARE YOU A COP? she just said lemme see you're
flight ticket, so I know you're not a cop!!! so this bust
will not be entrapment! *)
(* she goes to the bathroom and comes out, has him put on
a condom, but he says he's nervous, so he goes to the
bathroom, and when he comes out, the officers burst in
and arrest the prostitute! *)
(* they start counting all of the money that she had on her,
and they compare serial numbers on the marked money that
the officer gave her *)
(* then they started questioning her, with every word being
faithfully broadcast over this frequency!!! she gave her
real name, her street name, her address!!!! amazing that
the officers didn't shut down the transmitter before this!
anyway, this was the first time i have ever heard a room
bug over the scanner!! amazing stuff, eh? *)

OAHU TO NEIGHBOR ISLAND MOLOKAI AIRCRAFT FREQUENCIES:

Took a small DeHavilland Stol Twin Otter 300 propeller plane ride from
Honolulu International Airport on Oahu to Molokai Airport on Molokai.
I was able to sit right behind the cockpit and they left the doors ajar,
so I was able to copy the frequencies that they dialed into the radio.

Aloha Island Air was the carrier; it's a small division of Aloha Airlines.
I wonder which of these is their company frequency?

When I boarded the plane, these were the frequencies already showing:
121.9 118.1
131.3 121.4
114.8 116.1

During the taxi to the take-off position, the co-pilot changed some
of the frequencies, so these were the current operating freqs:
118.3 124.1
131.3 125.7
114.8 116.1

On the return flight later in the day, from Molokai to Honolulu,
they had these frequencies already dialed into the radio at take-off:
124.1 127.9
131.3 125.7
114.8 116.1

Finally, airborne and enroute to Oahu, the co-pilot changed the last
two frequencies to read:
119.1 118.1

phew!

before i left for hawaii, i programmed my bc200xlt with all of the federal
government & military "national" freqs, all of the fbi, secret service,
irs, ins, marshal, nis, osi, ... i filled all 200 channels on the dang
scanner, and just let it scan the first day -- nothing! so i had to PLENTY
of searching!

please post additions & corrections here on usenet.

thanks!

greg

Cellular phone channel construction

================================================================================
===

Here is a method of determining which frequencies are used in a cellular
system, and which ones are in what cells. If the system uses OMNICELLS, as
most do, you can readily find all the channels in a cell if you know just
one
of them, using tables constructed with the instructions below.

Cellular frequencies are assigned by channel number, and for all channel
numbers, in both wireline and non-wireline systems, the formula is:

Transmit Frequency = (channel number x .030 MHz) + 870 MHz
Receive Frequency = (channel number x .030 Mhz) + 825 Mhz

"Band A" (one of the two blocks) uses channels 1 - 333. To construct a
table showing frequency by cells, use channel 333 as the top left corner of
a
table. The next entry to the right of channel 333 is 332, the next is 331,
etc., down to channel 313. Enter channel 312 underneath 333, 311 under 332,
etc. Each channel across the top row is the first channel in each CELL of
the
system; each channel DOWN from the column from the the first channel is the
next frequency assigned to that cell. You may have noted that each channel
down is 21 channels lower in number. Usually the data channel used is the
highest numbered channel in a cell.

"Band B" uses channels from 334 to 666. Construct your table in a
similar
way, with channel 334 in the upper left corner, 335 the next entry to the
right. The data channel should be the lowest numbered channel in each cell
this time.

Cellular Phone Band A (Channel 1 is Data)

Cell # 1
------------------------------------------------
Channel 1 (333) Tx 879.990 Rx 834.990

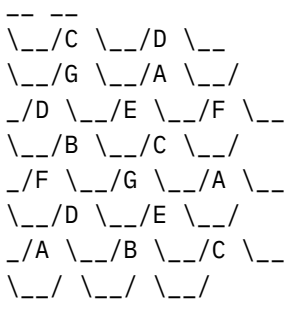
Cellular phone frequency and cell construction

==========
===



This represents how a cellular system might be laid out. Cells A and B
never share a common border. Neither do B and C, A and G, etc. Cells that
are next to each other are never assigned adjacent frequencies. They always
differ by at least 60 kiloHertz. To track a mobile phone as it changes
cells,
let's put the mobile in a B cell. When the mobile switches frequencies, you
know that he could only go to an D, E, F or G cell because A and C have
adjacent frequencies. The two tables below will help you determine which
channel cells can go next to each other. You can contact your local
cellular
phone company and see if they have any maps of the cells available. This is

not a sure thing, but it couldn't hurt to try.

Cells that can go next to each other:

Cell Compatible cells
A C, D, E, F
B D, E, F, G
C E, F, G, A
D F, G, A, B
E G, A, B, C
F A, B, C, D
G B, C, D, E

Here is a frequency/cell layout chart. The cell frequencies are used by
the cell site towers, and the mobile frequencies are the input frequencies
used by the cars.

Wireline company cell frequencies (BAND B)

CELL A CELL B CELL C CELL D CELL E CELL F CELL G

Monitoring of the base sites is obviously going to be easier than
monitoring the mobiles. The cell base sites are towers (usually blue) with
a

triangle shaped "head" on top, and sporting a couple of what appear to be vertical antennas. These base sites have a range of 3-5 miles. If you take a
look at the honeycomb diagram, you can see how they are laid out. The cell transmitter is in the middle of the cell. It is possible to hear many, most,
or all of the cells in your city, depending on your location. The closer you
live to a boundary, the greater the chances of your being able to receive more
cells. Due to the nature of radio signals, the actual cell shape is more or less round. However, the hexagon shape lends itself better to show how the system is laid out. With a circular coverage area, there will be some overlapping between adjacent cells.

```
__ __
\__/C \__/D \__
\__/G \__/A \__/
_/D \__/E \__/F \__
\__/B \__*C \__/
_/F \__/G \__/A \__
\__/D \__/E \__/
_/A \__/B \__/C \__
\__/ \__/ \__/
```

If, for example, you live near the asterisk (*) in the above diagram, you
will be able go easily hear the G, C, E, and A cells you're near. Since the maximum _practical_ range of a cell is 3-5 miles, you'll be able to hear them
a bit farther away. However, due to the nature of the FM transceivers at the
cell sites (they capture only the _strongest_ signal), you should be able to hear all seven cells. Which _one_ of each cell you hear will depend on your location and the strength of the received signal. In the above diagram, you'll most likely hear the F cell in the upper right, rather than the one on
the left.

Mobile reception is almost a waste of time unless you have an outdoor antenna. And, since the mobile will be repeated on the cell site, it's better
to listen to the cell frequencies. You may not be able to hear both sides of
the conversation if you listen only to the mobile frequencies!!! It is useful,
however, for determining which channel cell you're in. If you use the antenna
that came with the scanner, mobile range will be decreased down to 1 or 2 miles. By checking the scanner readout against the cell list above (825.030-844.980 MHz), you can tell what cell the mobile is in. This is also

useful on the cell site frequencies. If you hear someone say, "I'm at the corner of highway FF and 37," and you know where the cell site antenna is in that area, you can check the frequency listing above and determine what cell that antenna belongs to.

GTE Airfone Frequency Allocations

A subject had been brought up on what the frequencies are used for in-flight air-to-ground and ground-to-air. The following should clear up the questions.

The FCC has issued rules on allocation of the 849-851/894-895 MHz bands for air-ground radiotelephone service.

The new action, effective September 9, 1991:

1) changes channel spacing from GTE Airfone Inc.'s de facto standards;

2) orders GTE to make its service available to other air-ground licensees at non-discriminatory rates;

3) divides each channel block into 6 control channels (P-1 through P-6) and 29 communications channels (C-1 through C-29);

4) provides for a communications channel bandwidth of 6 kHz;

5) gives GTE 22 months to modify its current control channel scheme; during this period, GTE can use the lower 20 kHz of each channel block, which includes channels C-1, C-2, and C-3, for control. GTE then has another 38 months during which it can only use a 3.2 kHz control channel in channel C-2 of each channel block. After these transition periods end (September of 1996), GTE must switch to control channels marked P-1 through P-6 in the tables below;

6) empowers the FCC to assign exclusively one control channel to each air-ground licensee;

7) limits the ERP of airborne stations to 30 watts; maximum, and that of ground stations to 100 watts maximum;

8) limits the ERP of ground stations to 1 watt when communicating with aircraft on the ground.

GEOGRAPHICAL CHANNEL BLOCK LAYOUT
(ground stations using the same channel block must be at

least 300 miles apart)

```
**************************************************************************
* Cordless Telephone Antenna -A.G.TENNA- August 3, 1989 *
* Designed by: Adam Gott (On GENIE: A.GOTT) *
*------------------------------------------------------------------------*
* For latest UPDATE, call: The Hole in the Wall BBS *
* (415)/524-1329 *
**************************************************************************

Introduction:
-------------

Below is what I have been using for quite a long time now
to stretch the reception range of my scanners on the
cordless phone/baby monitor frequency ranges. Using this
antenna, I have been able to receive about 10-15 more
cordless phones than with my discone or telescoping
antenna. I hope you will find this useful! Remember,
that stupid E.C.P.A. does not apply for these devices!

Required Materials:
-------------------

Coaxial cable - 50 Ohms - length variable depending on usage
Connector (to match your scanner)
Wire - Any kind, 30 feet or so

Instructions:
-------------

1. Attach connector to one end of the cable.
2. On the other end, strip off outside covering (about 1.5
inches). Twist braiding together.
3. Strip about .5 inches from center conductor.
4. Connect 10 feet of wire to the center conductor. Soldering
is the most preferred way to go here! If not, then tape
it up with electrical tape.
5. Connect 15-30 feet of wire to the braid. Solder this also.
6. Tape (or use some type of sealant) on the connection area
at the tip of the cable.
7. Finished, now hang it somewhere. Best results are obtained
by stretching it end to end as high as possible, but
in front of a window produces good results. Draping it
out the window is even better. Just try to keep the two
wires from running next to each other, this degrades
A.G.TENNA performance slightly.
```

8. Refer to below 'illustration' if you have any questions
or I can be reached on GEnie or The Hole in the Wall.

Cordless Telephone/Baby Monitor frequency review:

Base frequencies: 46.61 to 46.97 Mhz
Handset frequencies: 49.67 to 49.97 Mhz

Baby Monitors: 49.00 to 50.00 Mhz (reported)

Pleas for info!

If you live in CA, especially the SF Bay Area, please call
me on The Hole in the Wall. I am looking for people to swap
frequencies with. I also need some good bbs's to call, like:

Spectrum Analysis Center - (714)/532-2300
A.N.A.R.C. - (913)/345-1978

Thanks to these bbs's for all the information that we have
shared. And join Radio Communications Monitoring Association,
I finally did! (PO Box 542, Silverado CA, 92676, $18.50)

Jerry Gardner x323 says:

" Anyone know the air-to-ground frequencies used by Bay Area radio stations
" to communicate with their traffic planes and helicopters? I'm looking for
" frequencies used by KGO, KCBS, and any others.

One of the better freqs for the planes/helos is Metro Traffic. They
provide the service for a great majority of the radio stations.
Frequently the same people have different names when they come up on the
different stations. They can be heard on 450.0625 Mhz.

KGO operates their own aircraft and suppliments with Metro traffic.

KGO radio = 450.2125 Doesn't provide a great signal throughout the SF Bay
Area. I've found a lot of the services in SF between 450.0 and 451.0.
Hope this lists helps:

-Ken Navarre-

KGO TV 450.4625 Loma Prieta
450.2875 (engineering link)
450.2750

KCBS 450.0875
450.6500

KRON TV 450.4125
450.4375 (engineering)
450.4500
```

KPIX TV 450.8500
450.4875
450.5125

KTVU TV 450.3375
450.3625

KNTV TV 450.1875

: Anyone know the air-to-ground frequencies used by Bay Area radio stations
: to communicate with their traffic planes and helicopters? I'm looking for
: frequencies used by KGO, KCBS, and any others.

Heres a couple: KGO 450.2125
KCBS 450.0875

If you scan between 450 and 451 mhz, you will find others, Metro
traffic, etc.

CB can be fairly useful (when you want to speak to normal people,
not just radio
nutters), but what a pity we're stuck with an HF allocation
clogged up with
foreign SSB rather too often... We need a system that allows
silent monitoring,
like CTCSS, or (even better) a 460 MHz system as they do in the
USA, Australia etc.
28... Amateur 10m band, to 29.7 CW,USB,Satellite,FM 29.6 FM
calling
29.55...overseas FM repeaters, to 29.7
The use of HF spectrum as we know it changes near 26.1MHz, where
usage becomes more
like VHF/6 meters. You'd think that if any Tom, Dick or Harriet
can use 4W on 26 MHz,
that a licenced Class B amateur would be able to use at least 3W
(novice level)
somewhere in this band, wouldn't you? But no, 30MHz is the cut off
point (despite
not corresponding to the edge of any practical band usage) where
you need to pass a
Morse test just to be able to use SSB! And who do they survey, to
see if things
should change? The very people who have already suffered the
ordeal!
SELFISH B*****DS. Don't get caught up in the way things happened
in the past, riding
waves of nostalgia, but concentrate on the present, the future,
what today's very
different generations could enjoy - share your precious bands with
those who can
already do the same thing at 50MHz when the conditions are right.
When ever we're at
work, that is. Or make the Morse test need to be re-taken every
five years, we'll

see how quickly it gets dropped then!
Suppose there was no Amateur Radio, but such a service was being planned, to start
next year, with the rules and regulation we currently endure.
There would be an uproar,
wouldn't there? Nobody would seriously suggest a morse requirement. I rest my case.
We do not NEED different licence classes apart from Novice and Full. And don't use that
tired old "wally filter" argument, I've already gone to the trouble of passing the RA Exam.
Don't interfere with MY life, go and live your OWN.
I do acknowledge the "true spirit of amateur radio" (homebrew and experimentation) IS
different from the fanatical pursuit of "radio DXing". I'd settle then for a two class
system where existing Novices and Class B licencees could use HF SSB on restricted parts
of the bands using type-approved equipment. With DXing available to the public with properly
regulated callsigns maybe 27MHz would become a peaceful haven for local FM comms, and the
Aero (R) 6.6MHz channels could be clear at last.
And I DO realise that CW can get through when all else fails, and that if I ever reached
12 words per minutes I might get to enjoy it. Maybe. But I object strongly to HAVING to.
Similar argument - you've no right to force someone to drink something that you're sure
they'll like. And if you disagree with that, change the subject to sex then try again.
Again, the Golden Rule in life - don't live someone else's life for them - live your own!
Glad I've got that off my chest...--29.7----VHF----------

107.0... RSLs and other low power broadcasting, to 107.9
87.5 to 88 MHz was once used for base PMR (split -10:
77.5-77.9875).
97.6 to 102.1 MHz was used by the Home Office for Emergency
Services AMRT base,
until the late 1980s (split to 82.5-84).
105 to 108 MHz used from 1969 until the early 1990s for mobile JRC
PBR (split to 138-141),
and became available to Broadcasting in 1995.
Long distance reception is more common via the troposphere here,
rather than the ionosphere...
i.e a "lift" rather than "sporadic-E". "Tropo" tends to improve
the higher the frequency, and lower
frequencies are not affected; whereas ionospheric "skip" builds up
from HF, maybe reaching as high as
150 MHz rarely - but leaves higher bands unaffected.
DSI2 recommends that by 2020 when DAB is established, the band may
be reduced to 97.5-108 for local and
community broadcasting only.-108----------------------------
Aero. Navigation 108.05.. ILS/VOR/ATIS, to 117.95 (50 kHz

See Javiation's list. RTCA. ICAO.
118.0... AM comms, to 136.975 (25 kHz channels)
The use of 136 - 137 dates from 1990, and it's still shared with
satellite services until 1/1/2002.
Until the 1970s 50kHz channel spacing was used, and soon the
channels will be three
times closer with 8.33kHz spacings; in Europe in 1999, in the UK
in 2000.
So will the first channel be 117.983 or 118.0? Channel Names will
be used, such as :
132.000, 132.005 (same but 8.33 bandwidth), 132.010 (132.0083),
132.015 (132.0166)
The USA NexCom solution, though, is for digital TDMA on existing
25kHz channels (& also retaining AM capability)
using 8-phase shift keying, giving 4 time slots within 120ms
frames, providing for a mix of voice and data.
Coverage of 112-117.975 is included in the spec.s - and they
haven't decided about the UHF band yet.
121.5 Distress, EPIRBs 121.6 airport Fire Services

154... Home Office - Emergency Services, to 155.975 (with 146-148)
There is a Euro plan (25-08) to re-organise 146-156: (boundaries)
151.4 ... Base, to 156 (split -7: 146.8-151.4) single: 146-146.8
and 149.9-150.05 & 154.5-154.65
-156---------- Mobile, Marine VHF (SAR, MBR/CSR)
PMR/PBR + CBS + STH, Ambulances, Paging (ERMES), SRD, Packnet,
Civil Defence
156... Marine, to 163 - International and private 25kHz channels, single
and dual (split -4.6).
was 50 kHz spacing until SOLAS 1972, new channels were fitted in

between old...
Some sets may be set from "international" to "USA" mode, and then some
of the dual frequency channels can be used as single (ship channel) frequencies;
which could be handy for a "private" channel, no-one else would hear you! (apart
from coast stations that use that channel. So you'd want to pick a clear one - and
bear in mind that if you don't you won't be able to hear them telling you to move!)
Maybe it's best not to, then. Interesting thought though, isn't it?
There are Euro plans to use the paired freq.s for channels 87 and 88 separately, to accommodate VTS
at 162 MHz, and allow simplex at 157 MHz. Also plans to allow use of channels 75 and 76 for voice.
Earlier plans had included simplex use of channels 18 and 82-86.

156.0-158.4 lines up with 160.6-163.0 at 4.6MHz higher, the lower section being the ship/mobile
side of dual-freq. channels, the higher side being for shore/base.
156.375-156.875 and 160.975-161.475 are not joined, and have single-freq usage with international
channels at 156 and private at 161. The international channels finish at 157.425/162.025 and the
rest are private channels, which may be dual or single.
Between 158.4 and 160.6 the mobile channels of a PBR band can be found. As this 163.0375-165.0375
band utilises a 4.5 MHz split, the mobile side covers 158.5365-160.5375 - the gap at the bottom is
used for a few more single-freq. private marine channels, and at the top there are three local
authority alarm channels. Let's track this in two columns 4.6 MHz apart...
** First, two single freq.s... ---------- -------

163.0375---158.5375 PBR/CBS (split -4.5)
to...
The first 70 per cent used to be used for the old BT RadioTelephones :
163.0375... BT System 4, to 164.425 (split -4.5: 158.5375-159.925)
channels U001-U111
and before that :
163.050 ... BT System 3, to 164.400 (split -4.5, 25kHz channels 55-1 in
reverse!) ch17 was control
(until the 1980's saw the arrival of TACS at 935-950 MHz)
164.4375... the top section, to 165.0375, was mainly Private Message
Handling - operators speaking
to mobile doctors etc, and is now seeing more Common Base
Stations (PBR via a dealer who
supplies equipment and airtime) including some multi-channel
trunked CBS.
(PAMR Public Access Mobile Radio is mainly confined to Band
III,
and as with other trunked systems the control channels are
continuous).
163.900... now PMR dual and single, to 164.2 (159.4-159.7) with many
S.T.Hire channels.
164.225... now used by the Paknet system, to 164.3875 (base continuous)
The lowest portions are filling up with CBS and PBR.
Despite this section only being allocated to LAND MOBILE, (12.5 kHz PMR) in
some
books and magazines you may find extra marine channels given (channel
number
greater than 50), either single or -4.6 dual, in the first 150kHz or so.
Seems a bit odd, that. Marine channels are 25kHz bandwidth too, so that
ruins
half of the 12.5kHz channel above and below. How wasteful.
And was 160.9 just forgotten about? How sad that it would make my day to
find out.
Another mystery is the continued appearance in lists of the top channels
165 to 165.0375
being paired with 4.8 higher, rather than 4.5 lower. An RA document clearly
shows 165.050
as channel 1 in the high band. And 169.8375 is a simplex channel, etc.
Makes you wonder...
to 165.0375---160.5375
---------- --------

165.050 start of high band 160.550 - 160.575 Alarms (3x 12.5kHz)
** the end of this 2nd column now joins the
start of the 1st. now we've covered 4.6MHz **
** We'll change now to a new 4.8 MHz difference UPWARDS

165.0375 end of mid band 169.8375 end of single freq simplex
section
165.0500---169.8500 ch 001 PBR High Band
to...
Private Mobile Radio channels are allocated in all bands to different
categories such as :
National exclusive (53 dual, 12 single here in high band), CBS (8 dual
here),
On-site shared (5 dual, 31 single here - 3km range),
Wide Area Shared (189 dual - 30kms, taxis etc),
Short Term Hire (4 - 169.0125, 169.1375, 169.1625, 169.1875),
STH/demo/"parking"/Test&Dev (1 - 167.2000---172.000),
Road Construction (1 - 165.075---169.875),
UK General (5 single - mobile only, anywhere in UK, 5W ERP max, for not
more than 12 months in one place).
Which explains why that "spare channel" can't be used for anything else in
your area!
to...

227.360 (E12-C) LOCAL n/a 229.072 (E12-D) LOCAL/INR Northern Ireland
A whopping 6 programmes carried on each transmission. That's 12 in any one
location then. And that's supposed to be more efficient than the current FM
system? But I can get two or three times that many stations already, check
the FM band in London or Paris for example. Progress.
Ah, they'll say, but we can also use BandII when the analogue signals are
phased out, and there's L-band too (1.5 GHz).
Yee-ess, I'll say, but try fitting the processing power needed into a walkman,
and make the batteries last more than half an hour. Ha.
Oh, silly me, I nearly forgot. We don't really need more than ONE music station
anyway, as they all play the same 500 tired worn out "hits" over and over again.
And there's never enough advertising revenue to support TWO stations in the same
area, is there?
Am I the only person in the UK who wants to listen to good new music, rather than
the same old Simply Red/Phil Collins/Toto/60's/kiddie pop/REM/Peter Gabriel etc?
Most people I mention this to usually agree (willingly, too) and would rather
feel more "up to date" than all this living in the past. It is after all a great
pleasure to hear a fresh bit of pop and find you really like it - that is what
makes us go out and buy the stuff isn't it? Trouble is, when they do play the
latest releases, they play them every hour until you're sick if them - if you
have the radio on all day at work it'll drive you nuts.
So, from my experience most people are fed up with it, but as there's no
alternative the audience figures will remain high, that pleases the advertisers,
nothing needs to change, keep it bland, and the vicious circle continues...
How DO they manage to make even music I LIKE sound so awful?

978.... DME Ground reply X channels, to 1087 (paired with 1xx.x0 MHz) (to
+63)
1025... DME Air mobile channels, to 1150 (1-126 x 1 MHz channels;
1-16 and 60-69 not used)
Selected in aircraft by tuning to a paired channel between 108 and
118 MHz
Pulses transmitted by the aircraft, returned by the ground
station & time difference measured.
1104... DME Ground reply Y channels, to 1213 (paired with 1xx.x5 MHz)
(to -63)
1030 SSR/IFF (Squalk) Ground (secondary radar - rotating), air reply on
1090
-1,215----microwaves---------- Mobile, military, radar
1246... Russian GPS GLONASS (GLObal NAv. Sat. Sys.) L2, 0-12:
1246+n(0.4375) see 1602
1240... Amateur 23cm band, to 1325 CW,SSB/FM/TV
1296... narrowband modes, beacons, to 1297
1297... FM repeaters RM0 to RM19 (split -6: 1291..) 1297.0 RM0 1297.05
RM2
1297.075 RM3 1297.125 RM5 1297.15 RM6 1297.225 RM9 1297.375 RM15
1297.475 RM19 (not in use) 1297.5.. FM simplex, to 1298 1297.50 FM calling
1298.275.German repeaters, to 1298.65 (split -28: 1270..)
-1,325----(1.325 GHz)----------
Mobile, Satellite, Fixed, Navigation etc...
Rather specialist, wavelengths of less than 30cm really do allow
for high gain antennas, with very narrow beamwidths. Cable losses
become very noticeable and/or untenable. Mobile "flutter" quite
severe, mobile systems need many more base stations to cover a
given
area. Most useful uses are direct fixed links, point to point,
satellite
(line of sight), low range etc.
So - mostly un-interceptable and/or digital.
1,400... Transmission Prohibited, to 1427
Astronomy, Space Research, SETI, Hydrogen Line. Certain
frequencies around here
propagate very well through the universe, so the boffins listen
here for extra-
terrestial transmissions. But surely the little grey men are doing
the same thing?
1,452... L-Band DAB, to 1492
1,525... Satellite comms downlinks, to 1559 Inmarsat GMDSS etc (uplinks
1626.5-1660.5) (+101.5?)
1,575.42 Navstar GPS Nav L1 C/A (military accuracy with 1227.6 L2) (L3
1381.05 used)
1,602... Russian GLONASS L1, 0-12: 1602+n(0.5625) spread spectrum

1,610... LEO MSS, to 1626.5 (up&down) CDMA i.e. Globalstar, Iridium (TDMA, 780km up)
1,800.30.TFTS in-flight digital phones (air-ground), to 1804.969 (164 x 30.303 kHz channels : ground at -130)
1,690... Weather Satellite HRPT (Hi-res pics), to 1710 NOAA, GOES, MeteoSat
1,805... PCN mobile phones, to 1876.5 (split -95: 1710..)
1805 - 1816.5 soon to be shared by Cellnet & Vodaphone
1816.5 - 1846.5 One 2 One 1846.5 - 1876.5 Orange
1,880... DECT Digital Euro. Cordless Telephones, to 1900
1,900... future UMTS, to 2025 (with 2110-2200) IMT-2000, FPLMTS 3rd generation mobile (-190?)
2,310... Ham 13cm band, to 2,450
2,450 ISM Industrial/Scientific/Medical, your microwave oven. Really.
3,000 Radar 10cm 3,400... Ham 9cm band, to 3,475
3,675... C-Band satellite TV, to 4,200 5,650... Ham 6cm band, to 5,850
9,400 Radar 3cm10,000... Ham 3cm band, to 10,150 - and 10,300 to 10,500
-10,700---(10.7 GHz)----------
Satellite TV, Ku band - Astra,Eutelsat,Intelsat etc. (35,800km up)
10,700...FSS 11,700...BSS DBS (Band VI) 12,500...Telecom
-12,750----------
These are really small radio wavelengths...
24,000...Ham 12mm band, to 24,250
40,500...future ITC 7mm MVDS Multipoint Video Distribution, to 42.5 GHz
47,000...Ham 6mm band, to 47,200 75,500...Ham 4mm band, to 76,000
142,000..Ham 2mm band, to 144,000
248,000 Ham 1.2mm band, to 250,000 - 248 GHz, hmmmm.
Radio or Far Infra-Red? There's a bit of overlap near 1mm wavelengths...
-275,000------(275 GHz)--------
Far Infra-Red, to 25,000 GHz (over 1mm to 12&#65533;m)
-25,000,000---(25 THz)--------- Infra-red
-441 THz----------
Visible wavelengths. Otherwise known as "Light". Red to Violet (680-420nm)
Some of my favourite frequencies. Green is rather nice.
-714 THz---------- Near Ultraviolet. 300nm-180nm
-1,666 THz---------- Far Ultraviolet 180nm-91nm
-3,289 THz---------- Extreme Ultraviolet 91nm-10nm
912-100 Angstroms-30,000,000,000---(30 PHz)-----
X-rays 10nm-10pm 100-0.1 Angstroms
-30,000,000,000,000--(30 EHz)-- Gamma rays 10pm-100fm and beyond
That's enough. Obsessive? Me?

Normally not my tactic to tease with somthing in the Subject: line and post
a flipping URL, but here's a link to a web page with FEW words and a bunch
of pix of old CB QSL cards.

http://www.geocities.com/Heartland/Pointe/6742/

The following is a list of frequencies and channels assigned by
the FCC for use in the Citizen's Radio Service (channel, frequency):

01 : 26.965 MHz 21 : 27.215 MHz
02 : 26.975 MHz 22 : 27.225 MHz
03 : 26.985 MHz 23 : 27.255 MHz
04 : 27.005 MHz 24 : 27.235 MHz
05 : 27.015 MHz 25 : 27.245 MHz
06 : 27.025 MHz 26 : 27.265 MHz
07 : 27.035 MHz 27 : 27.275 MHz
08 : 27.055 MHz 28 : 27.285 MHz
09 : 27.065 MHz 29 : 27.295 MHz
10 : 27.075 MHz 30 : 27.305 MHz
11 : 27.085 MHz 31 : 27.315 MHz
12 : 27.105 MHz 32 : 27.325 MHz
13 : 27.115 MHz 33 : 27.335 MHz
13 : 27.115 MHz 33 : 27.335 MHz
14 : 27.125 MHz 34 : 27.345 MHz
15 : 27.135 MHz 35 : 27.355 MHz
16 : 27.155 MHz 36 : 27.365 MHz
17 : 27.165 MHz 37 : 27.375 MHz
18 : 27.175 MHz 38 : 27.385 MHz
19 : 27.185 MHz 39 : 27.395 MHz
20 : 27.205 MHz 40 : 27.405 MHz

1940. Chico in space - Shuttle Freqs

Space Shuttle Radio Frequency List
Rich Weinkauf, Farmington, MI
01/07/92

A Space Shuttle mission requires the coordination of thousands of individuals on the planet, and some off. This coordination is directed largely by radio communications, both voice and digital; and supplies the communications enthusiast with several opportunities for listening. The following list includes radio voice communication frequencies reported to be in use during a typical Space Shuttle mission. This list has been gleaned from many sources, including personal communications, messages on Prodigy, Amateur Radio Bulletin Boards, Space and Astronomy Bulletin Boards, and the NASA Spacelink BBS. All of it is subject to change without notice, and reception is dependent on your location and the propagation conditions.

I can be reached for additions, deletions, and corrections to this list via:

Packet radio: N8QLT @ WD8DWO.#semi.mi.us.na
CompuServe: 70534,227
Internet: 70534.227@compuserve.com
Prodigy: BNCG39A

Retransmission on HF shortwave ham bands (KHz, USB commonly)*

NASA: 20198, 20186

Goddard Space Flight Center
Greenbelt, MD
WA3NAN: 28650, 21395, 14295, 7185, 3860

Johnson Space Center
Houston, TX
W5RRR: 28495, 21350, 14280, 7227, 3850

Jet Propulsion Laboratory
Pasadena, CA
W6VIO: 21340, 21280, 14282, 14270, 7165, 3840

San Francisco, CA
NASAAmes Research Center

K6MF: 7165, 3840

*My own experience with STS-35 during 12/90 here in Southeastern Lower Michigan netted the NASA rebroadcast on 20198 KHz USB for about half the mission. Most other contacts were with WA3NAN on 14295, 7185, and 3860, although QRM on 3860 made the signals difficult to copy by 0000 UTC. W5RRR was regularly heard on 14280 only, but with a strong signal.

Other possible frequencies and locations as posted on the NASA SpaceLink BBS (205/895-0028) follow, with the message author's comments if pertinent:

AMSAT OSCAR A0-13 Satellite

1941. cleaning newsgroups - More Cop Codes from RCMA

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: Chicolini <chicolini@hotmail.com>
Message-ID: <6ohjfn$24c@sjx-ixn10.ix.netcom.com>
Source record: 152454

The following is a list of current codes used by the police
and other government agencies. This list was created for the
thousands of people who enjoy the hobby of "Scanning". It's
purpose is to supply the public with some of the codes that
are currently used in So. California. Some agencies may have
other types of codes or may use computer transmissions.

** WARNING TO ALL USERS ** It is a federal crime, with
severe punishment and/or fines, to 1) Divulge what you hear
to anyone who is not a party of the brodcast; 2)To make use
of any broadcast information for your own personal gain; 3)
To make use of any brodcast information for illegal purposes
or to commit a crime. Any such violations may be investigated
by the FBI and prosecuted by the U.S. Department of Justice.
IS MONITORING YOUR HOBBY?
The Radio Communications Monitoring Association is a non-profit
organization operated on a volunteer basis by it's members. The
monthly newsletter carries articles on monitoring,technical tips,
frequency information from all parts of the country, including
government, military and aircraft.

Hoo, boy <holding sides still aching from laughing so hard> thought I'd seen it all <still giggling> but this takes it <regaining control>.
Mackey is so freaking stupid he doesn't even know when the joke's on him. Hell, he doesn't even know when it's a joke!

Hello,
Iam looking for shrd_lu,
Did not here from him for several weeks.
How the new program is running ?

I saw these two frequencies on a web page. Im going to see them in a week and
a 1/2 and will try yours and mine out and see what i get!!
250.800
251.600

Once again I have to ask. Why does anyone want to listen to someone
ordering a Big Mac with Fries and a Vanilla Milkshake???

Well, first of all, I'm happy with this little guy but after an unfortunate accident with the antenna the only replacement I could find was a telescopic one with instructions on which steps to extend for which frequencies. Is this antenna better than the short whip type it came with? Are there other antennas I should consider?

Second, this scanner was a gift and my first scanner. How does it rate? I mean, I get all the police, fire, and neighbors that I think I can get, but I have yet to pick up anything outside of these frequencies (154-160 MHz, 46-50 MHz, and 460 MHz bands). Is it just that there is little to hear outside of these frequencies or is it that my replacement antenna is not up to par?

Thanks for any info or advice I receive.

Before I answer that, you need to answer me a question.

Why did you waste so much bandwidth reposting 400+ lines of text for your trite
comments?

Here's 1 answer to your question, now. I enjoy listening to some of these
places because, under my hood, I have a 100W bullhorn which is connected to my
scanner. I can often get feedback while sitting across the street. Gives 'em a
taste of their own medicine!

Cheap laughs and pure entertainment. That's what scanning is all about, right?

I don't understand why some people listen to the aircraft band. That puts me
right to sleep. To each his own.

From: "David M. Hitchner, KD5EIS" <NoOne@NoWhere.net>
Message-ID: <6ogond$2ag@bgtnsc02.worldnet.att.net>
Source record: 152495

Opto will not release the OPTOTRAKKER trunking codes due to an agreement
with ScanStar. This is the message I got from them:

"Sorry but we cannot release the codes because of an agreement with
ScanStar.
They have developed the technology and sealed an agreement with us not to
release the codes. I would suggest using the ScanStar software that comes
with the Trakker and enjoy what we have available."

I was planning to purchase one until I found this out. I fail to see why
companies like
ICOM, Opto, and other companies refuse to release codes for products they
sell. It's
like someone selling you a VCR and not telling you how to program it.
Unless you
can figure it out yourself, you are out of luck.

I purchased an OS-456 from Opto because they sent me the codes. If ScanStar
developed the technology for the OPTOTRAKKER, why not just give them a cut
of
the profits itstead of withholding codes that would generate third party
software and
boast sales.

You don't get it. Not only do you hear the customer and clerk talking, you can
also hear the "private" comms between the employees which do not go out over
the drive-thru speaker. Fast-food workers tend to enjoy gossip...comments
about the customers, other employees, their sex lives, the sex lives of their
friends, etc. Better than daytime television!

"Where's that big 'ol CB RAMBO??"

I'll bet Toilet Boy doesn't even know the difference between green and
white antenna grease, either.

Truth hurts when you get nailed with it, doesn't it Toilet Boy?

> yet YOU are the one who is always coordinating with your buddies
> to gang up on me becasue you don't think you can handle me
> alone!

More delusions of adequacy. You really need to keep up with the
expiration
dates on your prozac FOOL!

> heheheheehhehehehehehehehehehehehehe

Another piece of brain flatulence from the resident moron. Watch those
dates, Toilet Boy.

> could!

ROTFLMAO! Check DejaNews Toilet Boy (I'll direct you if you need help).
I and many others explained it to you. You're too stupid to comprehend
that you're in over your head.

It is you who is the LIAR (and a friggin' loon).

Another lie, Toilet Boy (no surprise). You have not presented any
on-topic information. So far, all you've done is acknowledge that
coaxial cable exists in the universe, nothing more.

ya friggin' loon

FYI

The following article on Fast Food Monitoring appeared in the
August 1996 edition of Monitoring Times.

FAST FOOD SMORGASBORD
By Bob Grove

"Welcome to McDonald's. May I take your order?" How many thousands of times every day is this friendly greeting parroted across the Country? And how many scanner enthusiasts tune in 154.600 and 35.02 MHz as they drive past interchanges on our nation's highway system?

But the big arches are not the only architecture to house friendly fast-food frequencies. Just about every chain with a drive-by kiosk has two-way intercommunications with its customers, using frequencies in low band, high band, UHF, and even 900 MHz.

While the belt-worn transceivers are low power, the fixed repeater can usually be heard for a half mile or more. A local McDonald's restaurant uses a Panasonic system known as the "Order Taker," a likely name, indeed. A nearby Hardees' system is made by H.M Electronics. While the radios are usually sub-audibly tone encoded to avoid interference (see Table 4); some cases of intentional interference have led to substantial fines and suspension of FCC licenses when hams have abused their radio privileges.

Some unintentional interferences have proved amusing. A church reportedly installed a wireless public address system on the same

frequency as an adjoining fast-food restaurant. As the minister raised his eyes skyward and requested divine guidance, his parishioners heard the electronic reply: "Cheeseburger, all the way, hold the mayo!"

Clerks frequently switch to internal intercom without realizing that, while the customers can't hear their comments, stalwart scanning enthusiasts can. Common fare includes discussions of dates, working conditions, other employees and their employers, and remarks about customers. When the scanner listener happens to be the customer, he reaps a particular delight in catching the employee off guard by responding to what was suposedly a private remark.

A short time ago we learned of one resourceful and highly unlawful prank pulled by a ham with a crossband-capable transceiver. Poised between two prominent fastfood restaurants, he tuned in the customer frequencies from one restaurant and retransmitted it to the competitive restaurants' order takers. Wendy's order takers were understandably miffed when they were getting orders for Big Macs, while McDonald's clerks were scratching their heads figuring out how to serve up a Frosty! It may seem like harmless fun, but don't do it!

This month MT takes a look at the vast, largely unrecognized spectrum shared by these harbingers of hamburgers. We owe a special debt of gratitude to Bob Eisner for sharing the largest and most-up-to-date list of fast food frequencies ever published.

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000
154.5700 --- 170.2450
154.6000 --- 171.1050
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125

If they're using "3M" or "GM" headsets then you need to search from 920-922 Mhz Wide FM for the speaker frequency and from 903-905 Mhz Wide FM for the headset frequency.

An ariticle on Fast Food monitoring appeared in the August 96 issue of Monitoring Times. It can be view online at the following URL http://www.grove.net/fastfreq.txt

i dont know first hand about EDACS systems... but i know there is a prg
by one of the folks that made a version of 'trunker' (which follows
motorla sys)... so using 2 scanners it is poss to follow a GE system..
try..

1996. Which TrunkedTracker should I get (if any)?

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: busguy2@aol.com
Message-ID: <19980714120706O0.IAA10959@ladder03.news.aol.com>
Source record: 152521

I am thinking of purchessing a trunked scanner (handheld). Which should I go with (the Radio Shack version or the Uniden version (the diffrence is about $30 the RS version being $30 cheeper). If I by a radio now, will I need to buy another one.
My local dept. uses Ericson (FD and First Aid Squad is all tied into PD). Does it pay to get a trunked scanner, since I have to listen to it like an old scanner (I do not have an 800 MHz scanner currently). Also, my county is Ericson trunked.

Errrr... It is a Federal violation to make use of ANY such transmittion
for PROFIT. And newspapers are definitely using it for profit. So are
wrecker drivers. Therefore, they violate Federal law. Of course, PROOF of
such a violation is most difficult to present in court...

Hi all

I am baffled by a strange situation and is hoping somebody can help me.

I was wondering if somebody can tell me if a cordless phone/ answering machine *while it is not being used* can pick up and record messages !! from calls meant for other people and other phones.

I have had unexplained messages left on my machine ever since I bought the Uniden unit. It is a 900 Mhz unit I think. Then yesterday it recorded a part of what seems to somebody talking to somebody else, even though I could not hear the second voice. It stars and ends kind of abruptly.

I would appreciate some inputs. Kindly e-mail me a copy of your response.

many thanks
d

Actually, Dale, I still get lots of good information and help from this group. The off-topic messages are quite easy to identify from the subject line! 8-)

Some would prescribe the use of a twit filter on your reader, but I've found even the loosest of cannons have gems of knowledge that we can all benefit from. 8-)

Good signals

No, you are wrong. I used to be rather bad, I admit. I even had a few people report me, but I apologized to them, and I've stopped it since then.

The only reason I am on R.R.S. and A.R.S. is because I am interested in scanning and a little entertainment. I am (or used to be) very active on other newsgroups, forums, etc, also. I haven't had much time lately to be everywhere (maybe for the better?) since I just got into ham radio.

I've apologized to everyone I've offended, and [I hope, at least, that] no one "hates" me anymore! <g>

Hello all,
This is a direct quote to myself from a VERY reputable dealer but I will not disclose who they are for various reasons.....

"We are sorry to inform you that the AOR 8200 has some problems.
The only reason why the 8200 model is not available at this moment is that the 8200 has some technical problems.
We are sure that those problems will be solved. They are no major problems but we and naturally AOR and the AOR importer want to supply a top range scanner with no faults.
So please be a little patient. We will inform you when the improved models are in stock.
This is normally confidential information.....bla bla bla....
I am just tring to help out this guy.......
Please dont e-mail me with the comments because now with all the BS on this NG I dont give a shit about anyone elses opinion but my own.
At one time this was my start page, but now I'm affraid to even look at this NG. I came home from Wildwood NJ today and out of 649 unread posts, 40% were CANCELLED posts.......

Source record: 152537

>I've been saving my pennies for this new ICOM PCR1000, but >now I'm a little fearful after reading about problems the >"programming types" are having.

Rox,
Why don't you call Icom support and share your concerns with them? And if you would, let the rest of us know what they have to say. I may have worn out my welcome there, but a prospective owner should get an honest and open answer from them. You might wish to specifically ask - [my predictions of their replies are in brackets.]

1. Is there any validity to the EEPROM corruption issues that have been widely discussed on the internet? ["what EEPROM corruption issue? We are unaware of any such problems."]

2. What is Icom's policy regarding warranty on the radio related to this EEPROM corruption? ["no problem - this is a non-issue, we are not aware of an EEPROM corruption issue."]

3. What is Icom's policy regarding warranty on the radio HARDWARE if I choose to use third party software? ["well, er, why would anyone want to do such a thing?" Our software suits all our users just fine. And if your radio EEPROM does become corrupted, it will not be our fault and we will consider your use of third party software the same as a 'hardware modification'."]

NOTE: You should protest at this point that they already said there was no EEPROM corruption issue! <smile>

4. Same as #3 with the qualification of what if the third party software vendor is referenced on Icom's own web site as a source of redio control software? ["er, uh, those references and URL links relate only to software for our OTHER radios (you know - the non-computer dependent ones). Ummmm, the PCR-1000 support from any of those third party sources is unofficial and unlicensed and we cannot support its use."]

Now try to nail down whether they will warranty the radio hardware if it fails during use with third party software. This is at the core of a lot of the disatisfaction some owners have been so frustrated about.

And ask about anything else you have concerns about. Sharing your experience back here on the net will be most appreciated.

Good luck. Shed a little light on this whole issue and you'll be hailed as a hero to one and all! :)

Could some one email me audio files with GMDSS/DSC samples?
I am the author of RadioRaft, a multi-mode radio data decoder software
working with the Hamcomm interface.
For the next release, I would like add the decoding of Digital Selective
Calling used in the maritime mobile service.

International DSC frequencies are:
VHF Ch.70 (156.525 Mhz)
MF 2187.5 KHZ
HF4 4207.5 kHz
HF6 6312.0 KHZ
HF8 8414.5 KHZ
HF12 12577.0 KHZ
HF16 16804.0 KHZ

Audio files .wav, 8bits, 11Khz sample rate, are enough.
Tks in advance.

I've seen some of those cordless answering machines which have a memo feature, where you can record short memo's on the tape by pressing one of the handset buttons. If you left your handset off the base during one of those unexplained recording episodes, it is possible that the base was mistakenly receiving the signal from another handset. This should be highly unlikely given the coded security features of most newer cordless phones.

A more likely possibility would be a glitch at the phone company. During a recent software upgrade, my local phone company caused all sorts of confusion similar to what you described.

You have a lot to learn. Just because some people agree with you don't make
it law. The law is specific that you do not tell someone else what you hear.
It doesn't say that you can tell other scanner listeners just because they
could have heard the same stuff.

Can you get along? That's the real question Dale. You can ask "you all" to get along. But they're pretty much gonna do what they want to do. Quite frequently, pleas like yours don't achieve very much. I wasn't sure whether you knew that or not. Not much you can do about the way others post on the unmoderated side of the USENET.

You'll pretty much have to ignore the clutter or employ a newsreader that filters out the clutter you don't want.

Are you a newbie?

Yes, unfortunetly. Our local cops/fire use the EDACS.
It is a trunking system that has built-in beeps and
buzzes to discourage listening. However, there is a
product that will eliminate those noises, allowing for
normal scanning. This will NOT follow the trunked signals,
only eliminate the irratating noises. I haven't sent
my new scanner in yet for the mod but I plan to.

See the "G/Wiz circuit at
http://www.scannermaster.com/prod05.htm
They also do a good job of describing the EDACS.

That's known as direct-sequence spread spectrum.

> while trunking just hops a common carrier
> signal around at a pre-determined code on different frequencies.

And that's actually a very basic description of the other type of
spread-spectrum mode, known as frequency hopping!

However, I agree that despite what the pathological lying monkeys in
the Motorola marketing department say, trunking technology doesn't fit
the contemporary definition of Spread Spectrum.

I'd pay $200. Personally, I wouldn't pay anymore than that.
I just bought a new Pro-90 with trunking for $199. I
couldn't justify spending more for an older/used radio even
though it does have "potential". If you are really
interested in selling it, contact me directly.

From: tharkun@nwlink.com
Message-ID: <6og58p$3qg_002@news.nwlink.com>
Source record: 152558

I've gotten one reply to my post asking for Blue Angels frequencies, since they are coming to Seattle in early august.

For anyone else's interest, the freq's cited were:

265.350
275.350
345.900
238.150
168.900
170.900

as captured @ Norfolk naval xxx in april

2034. Difference between the MVT9000 and 9000M

Newsgroup: rec.radio.scanner

:Is there a complete list anywhere of all cellular frequencies,Im tired
:of searching,Id like to enter them in numerical order in my
:scanner!!!!!!
:For Educational purposes only,of course:)!!!!
: Thanks

All you need to know is that the cell base transmit range is from
870 to 890 MHz in 30 KHz steps.
870 to 880 is PAMTSA while 880 to 890 is PAMTSB, but you don't need
to know that.
The hard part is entering over 600 frequencies into your scanner.
Since the frequencies are confined to 870 to 890 in 30 KHz steps
why not program the seach function accordingly?
The old 007 mobile system only had 120 channels in the 500 MHz
range so it was more practical to program them all in.

:I don't even have a scanner that receives cell, but I was curious.
:Let's say you are driving down the highway beside a car monitoring the
:occupant of the other car on their cell phone:
:
:Question one:
:How do you know if the frequency you are on is a tower or their phone?
:(as I understand it you would only get their side of the conversation)

Phone tx is restricted to 825 to 845 MHz. Tower tx is restricted to
870 to 890 MHz.

:Question two:
:If you are monitoring their phone, how could you find them on a tower?

Simply add 45 MHz.

:Question three:
:What happens when they switch towers? Does the phone and tower
:frequency change? Or just one?

They are always 45 MHz apart.

:Question four:
:If you are talking on an analog cell phone. Is there anything you
:could do to keep someone from monitoring your conversation on a
:scanner? Or make it more difficult?

If you are moving and thus switching cells it will make it harder
for one person to follow you.

Otherwise you need scrambling but that will only work where the
person you are talking to has a compatable scrambler.

If you see someone nearby using a cellphone you should remove
the antenna from your scanner and search from 825 to 845 MHz
in 30 KHz steps.

>days Thank you

Michael,
The Sound Squelch is a handy feature that keeps the scanner from stopping on frequencies that have a signal, but no sound. When engaged, if the scanner stops on a frequency and there's nothing there but a carrier, it will quickly resume scanning. In theory, it keeps the scanner from stopping on any channel where there isn't a voice or data or any other sound being transmitted.
The ATT switch controls an ATTenuator, which cuts the received signal by 20 dB when switched in. So, now, you're wondering why in the world would you want to do that?? Sometimes signals can be so close and so strong that they will overload the scanner's circuitry. This switch helps you avoid that problem by cutting the signal down to a managable level.
Enjoy your 2006. It's a great rig. (I have a 2005 and swear by it).
Happy scanning,

Dave, K4CC

No. Trunking (in the conventional usage) is regular analog FM, and has
nothing to do with Spread Spectrum. It has more in common with analog
cellular phones.

I'm looking for California frequencies for the following counties:

Almeda County
Alpine County
Amador County
Butte County
Calaveras County
Colusa County
Contra Costa County
Inyo County
Kings County
Lake County
Mariposa County
Merced County
Mono County
Monterey County
San Benito County
San Fransico County
San Mateo County
Santa Clara County
Santa Cruz County
Sierra County
Sonoma County
Tulare County
Tuolumne County

They are for an online database for Northern and Central California that I'm working on. Any help is greatly appreceated and thanks to all those in advance.

Mike

2052. RS Pro 90 TrunkTracker Question

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: Joe Morris <jmorris@i-55.com>
Message-ID: <01bdaed8$5890de60$6065e7d0@default>
Source record: 152577

I have been using a Pro 60 for a couple of years now. So, I'm still relatively new to scanning. I understand that many public service frequencies, like State Police, are now using some trunktracking standard. I've read a little about it, but still have some questions. Since RS has the Pro 90 on sale (with coupon) for $199, I am considering buying it to listen to state trooper traffic in my area.

My question is specifically can the Pro 90 perform trunk tracking and scan other channels as well if there is no action on the trunking frequencies? My question is prompted by observation of a trunking button on the face of the scanner. The sales clerk at my local RS store was less than knowledgable on the subject. And apparently looking at the owners' manual is out of the question.

Any help for a tracking newbie would be much appreciated.

Joe

Message-ID: <35AAD3C5.25255CC7@bellsouth.net>
Source record: 152580

Are there any mods for Cellular on the ICOM R8500 scanner? Also does anyone have the backlight and any other mods for the Uniden SC-150 Handheld scanner? I am considering purchasing a ICOM base unit if I can get one unblocked.

Any comments or suggestions are welcome.

Thanks,

conwaycc@bellsouth.net

The PRO-60 is hardly modifiable, at least by non smt technicians, even
then it only scans in 12.5khz steps. Not terribly useful in the usa.

On that trip reversed the best freq is 27.185

2058. Re: BC235 Attenuator function

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: Mike Fairleigh <mikef@sky.net>
Message-ID: <qzAq1.57$Gk2.1631798@alpha.sky.net>
Source record: 152583
Cross-posted to: rec.radio.scanner,alt.radio.scanner

It's hard to nail this down with certainty. My 235 attenuator was on (unknowingly) for the 1st 3 months I owned it. And yet, there is apparently a pager transmitter near my office because every day as I drive in to work, the intermod interferes with all but the strongest signals on most other frequencies. I don't know where the transmitter is, but having the attenuator on doesn't eliminate it. There have been a few other places (not many, though) where there has been pager intermod and turning the attenuator on eliminated it. HOWEVER - I haven't tested that in trunk mode.

Source record: 152584

I don't have a Pro-90, I have a Pro-91, but I have heard they work very similarly. The Pro-90 can either listen in trunked mode, or in regular scanning mode, but unfortunately it can't do both at the same time. I have 2 scanners running at the same time, one I have listining to the neighboring county's trunking system, and the other I have listinging to my local frequencies.

Radio Shack is good enough to put the manuals for all of their scanners online, so you can get the answer first hand here http://support.tandy.com/support_electronics/42507.htm (Pro-90 Manual)

for the pro 91 which is also a good radio but has less frequencies (was 179 with cupon) go here http://support.tandy.com/support_electronics/46694.htm (Pro -91 MAnual)

hope this helps

2063. Re: RS Pro 90 TrunkTracker Question

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: bjradioman@aol.com
Message-ID: <1998071404183500.AAA14365@ladder03.news.aol.com>
Source record: 152588

Hamster was right. The unfortunate thing about ANY TrunkTracker scanner (or the one's I've heard of from RS and Uniden) is that they will not scan conventional and trunked at the same time. So, if you want to scan both conventional and trunked at the same time, keep the Pro 60

Hope this helps.
Buddy

P. S. to all: Any questions about the Pro 90 or Pro 39 i'll try my best to answer!

cdeviney@ipa.net (Cathy De Viney) wrote:

> How about a compromise?

Hi ya, Cathy! Just some comments - most of
the issues have been well summarized and
stated - there is little to add. Some, maybe.

The fact is....this is a form of "virtual
reality" under an anarchy. That's just the
way it is. It's neither bad nor good, except
in the individual eye of the beholder.

And....that beholder has full and total control
over his/her perceptions. Some choose to see
evil; a few choose to see good; most, I think,
see a little of both, but pay attention mostly
to what interests them, good, bad, or indifferent.

Me, I do it all, the good, the bad, and the ugly.
But every choice is an individual one and wholly
within the power of the User to make come true.
And no choice is better or worse than another.

Moderated newsgroups are fine for those who
want them. Compromises are fine for those who
want to do that. But the bottom line is that
not all the people are going to be satisfied
all the time. This ain't "real life"; it's
virtuality, where there's no way even a sicko
can appear in your monitor and spit tobacco
juice between your eyes. THAT and other
physical harms can't happen.

This is something to keep in mind.

Yes, certain intangible harms are possible, but
like skinned knees on the playground, you just
have to take those in stride and move on. If
you legislate away skinned knees, then you outlaw
the playground. No if's, and's, or's, or but's.

Lastly, real compromises and real solutions are not possible. Period. This newsgroup is not a reality. Real techniques can't be made to work in virtuality, especially an anarchial one.

Fer Pete's Sake, remember the "Gentlemen's Agreement" that started in the mid-60's with respect to how the Citizens Band was to be apportioned and used? Ch-16 was for SSB only. Ch-9 was for emergencies. Later, Ch 36-40 were also apportioned to SSB....by "gentlemen's agreement". Later, the FCC confirmed the ch-9 stipulation, but refused to act on the rest.

It works.......some of the time. A lot of the time not. Depends. We could all make an "agreement" here, but the turnover is much too high to expect it to be followed. Newbies come and go all the time, and all it would take for another brouhaha to unfold is to tell a reasonably smart newbie "how things are done here". He'll turn around and tell YOU how things are going to change to HIS way.

And it doesn't take a newbie to pull that stunt. The sickos do it here all the time. And there is NOTHING we can do about it aside from achieving a mastery of our own computers and software, and of our own minds and participation processes.

Truly, Cathy, it can't and won't get any better than that. But....if you think about it, there is no need for it to get any better if each of us immunize ourselves against the predatory sickos, weirdos, flakes, fruits, nuts, and lids. Just remember, they are "immune", too. It goes with the turf......

It is a case of the irresistable force applied against the immovable object. Neither can vanquish the other. Try as they might, the effect is exactly and precisely the same as if they did nothing at all.

Seriously, Cathy, that's how it is....... laugh, cry, or shrug.....that's how it is. And how it will be........UNTIL the government steps in.....in which case, it'll go down the tubes and into the cesspool.

And I'm not referring to any special type or brand
of government, either. Federal government or a
pseudo-government of our own, it makes no difference.
The result will be the same.

Bad.

IMHO.

2079. Is restoring cellular gaps a waste of time?

Newsgroup: rec.radio.scanner
Date: 1998-07-14 00:00:00 UTC
From: milligraham@my-dejanews.com
Message-ID: <6oep94qip1@nnrp1.dejanews.com>
Source record: 152604

If you can pick up images of cell phone conversations on a double conversion scanner, then what is the purpose of modifying a scanner to receive the missing cellular frequencies? Can you hear more conversations on a "cellular restored" scanner than on a double conversion scanner in the 896-920mhz range? Ive taken the time to restore the cell band in a BC855xlt but I seem to be receiving the exact same conversations as I am on "images" on my other unmodified double conversion 800 band scanners. Was this just a waste of time, or is there some other advantage in restoring the cellular gaps? Any enlightenment would be appreciated. Thanks.

I am thinking of purchessing a trunked scanner (handheld). Which should I go with (the Radio Shack version or the Uniden version (the diffrence is about $30 the RS version being $30 cheeper). If I by a radio now, will I need to buy another one.
My local dept. uses Ericson (FD and First Aid Squad is all tied into PD). Does it pay to get a trunked scanner, since I have to listen to it like an old scanner (I do not have an 800 MHz scanner currently). Also, my county is Ericson trunked.

Trunking takes place on conventional channels with conventional powers and deviations. It just seems odd because all users of a system share all the system's channels, rather than each group of users having their own channel. In fact each group has a virtual channel, and trunking allows many more virtual channels than there are physical channels in the system.

Spread spectrum is an entirely different beast, spread out over a much larger part of the spectrum than the 20 or so channels in a trunked system, and operating at much lower powers. Also, spread spectrum does not use a data channel for coordination, depending upon a fixed initial sequence for synchronization, followed by frequency hopping timed by accurate internal or external standards. Spead spectrum, as a rule, is used for a fixed point-to-point transmission, rather than communication between multiple points.

CELLPHONE HACKERS TACKLE GARAGE DOOR OPENERS

Dallas, TX, March 2, 1996 (DLD DIGEST) -- Recent news media accounts have
focused on reports of thieves using high-tech, electronic code grabbing
devices to steal cellular phone access codes and disarm remote control car
lock systems. Now, thieves can use this same technology to copy garage door
opener access codes and burglarize homes. A new rolling code technology has
been incorporated into some garage door opener brands to combat code
grabbing theft. Homeowners need to be alert to the potential danger of this
new, seemingly invisible method criminals are using to break into homes
with these `electronic keys.`
Electronic code grabbing devices enable a criminal waiting near a home
to copy the garage door opener's radio access code when the button on the
remote controller is pressed. The recorded signal can be resent to open the
garage door, giving the thief convenient access to belongings in the garage
and inside the home, if the garage is attached. Many homeowners leave the
door leading from the garage into their home unlocked, making entry by a

criminal virtually hassle-free. Code grabbing devices are easy to obtain and can be purchased through mail order or built at home using components available from electronics stores.
New garage door openers using rolling code radio systems prevent this type of burglary by making a copied signal totally useless. Every time the remote controller button is pressed, the garage door opener's access code rolls or changes to one of 4.3 billion new codes. It's like changing the lock on the door each time it is opened or closed. The receiver in the opener's power unit knows which new code to expect from the programmed remote controller and will never respond to the same code twice. The new rolling code system will only respond to remote controllers programmed to work with the receiver. This eliminates the risk that someone could purchase a store-bought remote controller to randomly operate your door.
`We feel very strongly about making consumers aware of the potential danger that this type of crime poses and want to let them know that it is relatively simple to protect themselves,` commented Lou Gillombardo, director of the Garage Door Safety Center. `And while there are ways homeowners can reduce their security risks, currently only garage door openers with rolling code technology can foil a code grabbing thief.`
There are two companies currently incorporating this new technology into all of their garage door opener systems. The Genie Company openers feature Intellicode(TM), and Overhead Door Corporation calls their system CodeDodger(TM). Both are available through the companies' local authorized dealers and distributors. The Genie(R) brand openers are also sold through retail home centers and hardware stores.
While openers with rolling code technology offer the highest degree of security and the only defense against code grabbing, the Garage Door Safety Center advises that there are other security measures which should be observed by anyone with a garage door opener:

o While on vacation or away from home for extended periods of time, unplug the garage door opener unit or use a wall console security switch, which is an optional accessory to most openers.

o Just like you would change the locks on the door when moving into a new home, make sure you investigate the security of your garage door opener, as well. If there is an access code switch setting, it should be reset according to the manufacturers' instructions.

o Wireless keypads, which activate the garage door opener with a personal identification number (P.I.N.), are available for most garage door openers. This allows family members to open the door without the use of a key or remote. Never disclose your P.I.N. or leave it written down.

o Never leave your remote controller in the car or with a parking attendant. It should be treated like the key to your home.

o If you have an attached garage, make sure that the door which leads from the garage into the house is locked whenever you are away from home.

The Garage Door Safety Center is a public awareness program sponsored by The Genie Company and Overhead Door Corporation to provide consumer safety and security information on garage door openers. For more information or a free brochure highlighting important security issues, contact the Garage Door Safety Center at 800/464-1881.

CALIFORNIA CODES
PENAL CODE
SECTION 459-462.5

459. Every person who enters any house, room, apartment, tenement, shop, warehouse, store, mill, barn, stable, outhouse or other building, tent, vessel, as defined in Section 21 of the Harbors and Navigation Code, floating home, as defined in subdivision (d) of Section 18075.55 of the Health and Safety Code, railroad car, locked or sealed cargo container, whether or not mounted on a vehicle, trailer coach, as defined in Section 635 of the Vehicle Code, any house car, as defined in Section 362 of the Vehicle Code, inhabited camper, as defined in Section 243 of the Vehicle Code, vehicle as defined by the Vehicle Code, when the doors are locked, aircraft as defined by Section 21012 of the Public Utilities Code, or mine or any underground portion thereof, with intent to commit grand or petit larceny or any felony is guilty of burglary. As used in this chapter, "inhabited" means currently being used for dwelling purposes, whether occupied or not. A house, trailer, vessel designed for habitation, or portion of a building is currently being used for dwelling purposes if, at the time of the burglary, it was not occupied solely because a natural or other disaster caused the occupants to leave the premises.

460. (a) Every burglary of an inhabited dwelling house, vessel, as defined in the Harbors and Navigation Code, which is inhabited and designed for habitation, floating home, as defined in subdivision (d) of Section 18075.55 of the Health and Safety Code, or trailer coach, as defined by the Vehicle Code, or the inhabited portion of any other building, is burglary of the first degree.
(b) All other kinds of burglary are of the second degree.
(c) This section shall not be construed to supersede or affect Section 464 of the Penal Code.

461. Burglary is punishable as follows:
1. Burglary in the first degree: by imprisonment in the state prison for two, four, or six years.
2. Burglary in the second degree: by imprisonment in the county jail not exceeding one year or in the state prison.

462. (a) Except in unusual cases where the interests of justice would best be served if the person is granted probation, probation shall not be granted to any person who is convicted of a burglary of

an inhabited dwelling house or trailer coach as defined in Section 635 of the Vehicle Code, an inhabited floating home as defined in subdivision (d) of Section 18075.55 of the Health and Safety Code, or the inhabited portion of any other building.
(b) If the court grants probation under subdivision (a), it shall specify the reason or reasons for that order on the court record.

462.5. (a) Except in unusual cases where the interests of justice would best be served if the person is granted probation, probation shall not be granted to any person who is convicted of a felony custodial institution burglary. In any case in which a person is convicted of a misdemeanor custodial institution burglary, such person shall be confined in the county jail for not less than 90 days nor more than one year except in unusual cases where the interests of justice would best be served by the granting of probation.
(b) As used in this section, "custodial institution burglary" shall mean a violation of Section 459 on the grounds of any jail or correctional institution with the intent to steal items to use or convert for use as weapons, escape tools, or intoxicating drugs.
(c) If the court grants probation under subdivision (a), it shall specify the reason or reasons for such order on the court record.
(d) Any person convicted of custodial institution burglary shall serve his or her sentence, including enhancements, consecutive to any other sentence in effect or pending. The felony sentence shall be calculated under Section 1170.1.

This report was generated by PerCon Corporation -
http://www.perconcorp.com.

Data was extracted from a complete SPECTRUM database as of Summer 97, newer
than most other CDROM Databases.

If you need more current or more complete data, PerCon has the following:

SPECTRUM / Summer 98 Spectrum is a FCC Frequency Database of the entire US.
It contains over 3.3 million records (all FCC licenses- all frequencies),
with 15 fields of information. The system supports query, multi-browse
screens, reports and export to a UFDBF File. Operating systems are DOS,
Windows, Windows 95,Windows NT and Mac. This a hobbiest level product and
is extremely easy to use. Get them while supplies last !!! See SPECTRUM /
Summer 98 for more information. $37.45 (Includes 2 Day Shipping)[Image]

Professional Series The Professional - Regional Series is a set of CDROMS
that covers the US (all FCC licenses- all frequencies). Each has over 72
fields of data. It is the most comprehensive dataset available, with the
most powerful search-engine available. Program runs under Windows / Windows
95 / NT. This is an advanced hobbiest and commercial level product.
Professional level products are published quarterly. See Professional
Series for more detail.

2123. Re: Cell Phones as scanners?

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: a_alpha1 - TIgEAS LAiR <kaliber@pacbell.net>
Message-ID: <35AD3768.C00386AC@pacbell.net>
Source record: 152175

Please take note (all ye in this post) .,,,,

There is a substantial difference between a cellfone that
receives individual cellular channels (all of them) and a cellfone
that can SCAN cellular channels (like a scanner) ....ie: the oki-900.

All cellfones in test mode may be set to some particular channel
...which only amounts to being a synthesized single channel
receiver ..... the oki-900 , on the other hand , will scan from
channel xxxx to channel xxxx (set by the user , just like a scanner)
manually stopped and manually resumed by the user ....or computer
controlled (even to follow a conversation) with many scan options.

When discussing cellfones as scanners this is the ONLY cellfone
scanner ..... There is NO american info (digital) available for
cellfones made after 1995 (the government ess5 mod) available
for hacking and scanning .....If you know different , please contact
me direct via e-mail .....(info for my VAST collection of cellular data)
kaliber@pacbell.net ..... There is the European GSM , digital ,
(smart card) hacking going on ....but I'm in the USA where this
info doesn't help much .....(so far , unless you are into DSS
satellite work) ..... Perhaps you were misled by the #36XXX
command shown in Mot literature (for tdma phones only) which
has NO use or function in AMPS system fones (the USA) ....

Eyespy ...you should take a lil closer look at your (digital)
brick fone and let us all know about it .....it certainly IS little
known , even by Motorola ..... and what was that " scan " command
again (for that brick ?) ..... I , for one , certainly want to know ....

a_alpha1 - TIgEas LAiR

EyeSpy wrote:

Hi John ,

About your web page you reference and the SPAM ads you
e-mail out ....Your opening page could use a little updating ....
along with some of your software references ....(maybe
you haven't updated your page lately) .... First DDI (snarfing)
is now routine , everyday soundcard software located at
WWW.techfreakz.org/banpaia/warez.html .... for DDI work
is freeware ....it works fine and those that say it doesnt are
TOTALLY misinformed ....Secondly your reference to pd-204
software is strange why would you want people to " buy " software
(like pd -204) when far supreior and FREE software that does
both POC and FLEX is available as freeware (and has been for
some time ??) Plain poc stuff is pretty much a thing of the past
now as pocflex software is up and running pretty well these days ...
Check this site and many others for poc and flex freeware ....

www.geocities.com/SiliconValley/Lab?1067/PROJECTS.HTM

I know that you sell that nice looking lil slicer circuit that you
have probably labored over, but slicers are very level sensitive and
soundcard software is far superior for POCSAG decoding ....
The best POCSAG software is available at http:/aab.4a.org/deti/
and usually costs money ....but cracks for the slightly older
versions are listed at :

www.warezslutz.com/crkspage/new/whcrackz.htm ....
and
http://us.box.sk/astalavista-usa/

(hamcomm ...dsp blaster and others are there too ....)

(ill bet you even use this stuff yourself ,,....fess up john)

And finally ....since I am a diehard oki-900 fan ,,,I can tell
you that you need to ad the 4713 and esp the 4715 (best)
oki-900 mods and you don't even mention that it is the ONLY
factory outa the box ...cellular scanner ......(strange ??)

Maybe you could go to DrWho 's site http://radiophone.dhp.com/
where there is tons more pager and cellular stuff and spiff up your
site a lil ..... (its the pd-204 thing that got my guff , john ..
I hate places that don't mention the free stuff instead of the
stuff you have to pay for .....mentioning both is ok though ....I just
don't like people that take advantage or make fools of others ...)
(thats just the kinda person I am ...sorry ..(not))

I only need to say this once :

NEVER TRUST ANYONE THAT ASKS YOU TO BREAK THE LAW

NEVER GIVE ANY ONE PROOF THAT YOU HAVE (broken the law)

Its simple .... trust a complete stranger with proof of illegal activities (by you) or not ......duhhhhhhhhhhhh..... this seems like a "no brainier " ....

I don't care anything about any web site anywhere , I do care others that may , while intending to do good , may well get them selves into serious trouble without thinking through what they are doing .....In this case I have directly mentioned this to the keeper of this page and have not gotten an answer ...just more posts asking others to break the law ....I don't think that a disclaimer for USA viewers would be too much to ask .....at least a warning to the (many) poor innocent fools out there that don't fully realize the potential consequences of their actions ..... There are (it seems like) zillions of similar posts , all the time ...and I comment on as many of them as I can ....also on the NUMEROUS blaitant rip offs ......out of (probably) 250 posts on this type of stuff ..... only one outfit in North Carolina ..has ever fired back ....funny huh ....if you were on the up and up wouldn't you fight back ??? I would .... how can this web page support asking the fine citizens of the USA to send them proof of illegal activity ??? I sure donno ... Many people in this country may not realize that what they are doing is illegal (even a FEDERAL OFFENSE) ... at least warn them and give them an even chance ..... silly me I guess ....

Anyone happen to have a service manual for either of these? I need to look over the headphone/speaker
circuit to solve a low headphone audio problem. Will cover reasonable copying costs for just the
schematic.

Thanks in advance for any and all help.

Of course not. RG-58 is too lossy.

You get the most bang for the buck with
RG-6 Satellite Cable and gold-plated
connectors and adapters. Radio Shack
has what you need.

I saw the same commercial, and my jaw hit the ground. They EXPLICITLY
stated that the use was for eavesdropping on your family and neighbors
coprdless and cellular calls. I mentioned to my S.O. that I doubted
we'd see THAT commercial again, unless something in the law has
changed.

> posted here, ASCII text postings are a blessing.

No problemo, that's for sure. If it can be
contained in an orderly, organized, decently
formatted text of not too monstrous size, then
the Usenet is an ideal medium, at least for a
week or so, however long a given server keeps
the article on its disk. Perhaps even for
larger texts, but there is a limit......

> For instance, I often
> find postings refering to a great site for south-eastern cleveland
> area frequenies (30-100 frequencies no more), I get all excited hoping

> a 404 error, or a downed server,

Well? You don't get every newsgroup post, either.
You'd be surprised if you KNEW how many NG posts
get "dropped" along the way. If your NNTP server
and their connection to the Internet are decent,
then 90%-95% of all posts will be retrieved and
available to you. But those are the creme de la
creme. Many ISP's fail to get even 80% of the
posts....but you'd never know that unless you
had two ISP's and compared two pulls, side by side.
```

> >or if the server runs I get to waste
> time downloading banners and navagating a dificult site.

Now....that borders on the verge of a personal
problem. <grin> I mean, some browsers, some
computers, and some operators are slower than
others. You can't always blame it on the site.

> On the other
> had, when an author posts the relatively small lists (you are right,
> big stuff is best left on web pages) everyone gets it, no 404s and no
> wierd pages to navagate.

Heck, all sites go down from time to time. I take
mine down once a month whether it needs it or not
just to reboot the server....and maybe defrag the
disk. That's about the only time it's down, though.

> On the other other hand: it is often nice to find a whole page to link
> to, becasue you will find a great data source with links to other data
> sources. Plus as you mentioned you can have 10mb freq lists on web
> pages.

Aha! Well, since you're so nice and decent
about it all and recognize the value of the
Web, here is a little freebie for you in more
ways than one. Check it out....in depth,
especially for your state, part way down the
page!

http://www.wvsc.wvnet.edu/~fcc/

> BTW: I've read all your scanner modification books. :)

All three? Wow.....I'm not sure I've done that.
(heh heh heh) I look stuff up in 'em all the
time, though.

But to sit there and read 'em? <gack> :-)

RG-58 exhibits a LOT of signal loss at VHF/UHF frequencies, and the longer the cable run, the greater the loss.
RG-8 and RG-62 are both good, moderately priced types that work well.

Think your calulations are off base by atleast five feet. Your antenna
would do better at 23mhz and below accordin to industry standard
calculations. Better luck next time.

Ok Rich, you win. I guess I'm tired of buying items with computer
interfaces
and not being able to control them using my own software without fighting
to learn how to interface to them. You make a valid point about taking my
complaints to ScanStar, but I seriously doubt that it would get anywhere.
To be fair Opto has released information on its other products. I'm
basically
venting my frustration about the current state of the radio industry (Ham
included)
when it come to computer interfaces.

Then why do you keep dancing around it , show proof from the San Diego Courts that proves statements made by you Nick OBFD are factual .
I know your going to dance around with some other excuse or lie for not doing so.

You know there is no fact in your accusations and innuendo and that is the reason you keep dancing around the truth.
From where did you get the original information , bet you won't be able to come up with any as it was a story that you and your buddy Nick fabricated like all the rest of your lies .
If you can't show proof of the warrant you could at least show the source you got it from.

2148. Easier Way for Pager Networks to Operate?

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <35af37f6.11459778@news.mindspring.com>
Source record: 152290

I just upgraded to an alphanumeric pager and have been looking into some of these neat emergency notification networks. My question is, why do they all require a specific brand pager?

Wouldn't it be possible to take advantage of the fact that most of today's paging carriers now accept e-mail inputs? Couldn't these networks simply compile mere email addresses of pager destinations and then send out incident info over the subject lines (where more universal readability of the text is assured)?

If done that way, it wouldn't matter if you owned a particular brand pager or subscribed to a particular carrier service. Plus, anyone with a police scanner and a copy of Eudora or Outlook Express could set up a notification network.

Is anyone doing this or is there something I'm missing? It seems to me like the only way it isn't done this way now is because in the early days of some of the more popular emergency notification networks you couldn't send text to pagers by e-mail. Now this is a common feature of most all major paging and PCS phone companies.

Source record: 152292

Mr. "I'm still a loser and proud of it even though Richard Simmonds still won't take me back" Mackey demonstrated more circumlocuted logic and dementia:

> So then you are saying that coaxial cable in NOT on topic for
> this NG & you have been participating in off-topic discussions?

First, you *actually* have to say something concrete about the topic for it to be on-topic. So far, all you've done is talk about talking about the subject (what's the matter, Toilet Boy, too profound for your feeble brain to comprehend?).

That isn't being on-topic; it's just more of your twisted verbal masturbations. You should stay in the bushes with the rest of your little parg buddies servicing the clientele. That is, after all, the only thing you can do barely well.

2151. Re: Clean Up The Scanner Newsgroups

Mr. "I love to pass the time in an abject fog of dullness in-between doing men in the bathroom" Mackey mumbled and pouted listlessly:

> Richard Kendrick wrote:
> > More delusions of adequacy. You really need to keep up with
> > the expiration dates on your prozac FOOL!

> WHY is it that YOU know so much about PROZAC?

Observing your idiotic behavior and being amused at your inane ramblings as sparked my morbid curiosity in lower life forms (in your case, I'm being *extremely* generous). Watching you and knowing how dependent on prozac you've become over the years, has enabled me to learn about the effects of the drug on sub primate species.

> you must be using it very often!

It is well know that your species does not have the intellectual capacity to understand what homo sapiens consider very simple concepts. One of those concepts is the power of deduction through observation. The only reason humans haven't put you in a cage in a zoo is we like how easy it is for us (humans) to see what a FOOL you and your species are. Although many have requested it, putting you in a cage would ruin our fun watching you.

We know that nature has a way of compensating for weaknesses. That's why blind people develop great hearing. That's also why stupid people (like you) have big mouths and no brains.

Like MAlexder (malexder@aol.com) says, anyone who constantly bombards a newsgroup with spam and advertisements certainly isn't a company worth buying from.

I've talked with you before, and I thank you VERY much for ceasing all posting in the amateur newsgroups, I must assert my hate towards spamming ANY newsgroup.

You may continue, I have no control over it, but it is distasteful.

My point: I know you must want your company to succeed, but spamming isn't the best way. Spamming will get you nowhere.

2163. Want info on NE5205 Signal Amp

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: Dennis Hennigan <dennis@top.monad.net>
Message-ID: <6ojohq$8nd$1@news.monad.net>
Source record: 152305

Hi,
I have a 80's vintage signal amp I put the divice together around 1984 and I just dusted the sucker off.

All the info I got on it is that the model number of the amp is AAS5205 and it's an NE5205 device with 20 dB gain but no noise figure. The unit I put together has two stages for 40dB of gain and has been modified DC blocks and 50 Ohms.

Does antone remember this unit? What is the noise figure and bandwidth? Also if nothing else what mfg stamps there parts NE?

thanks for you help
Dennis

Message-ID: <35AD61BE.C01B51A7@erols.com>
Source record: 152309

I have a like new Exabyte 8505 XLS 8MM SCSI internal tape drive, 14GB compressed. Will sell for $750 or trade for Bearcat 890, 895, 8500, or 9000 scanner plus cash based on current average selling price for whatever scanner someone has. It would be a plus to find someone that has a scanner that can be opened up on cellular, but I hear that the 895 is out. I would still trade for it though. Scanner must have that neat count feature that shows how active a freq. is after you let it scan for awhile. Also, prefer non smoker owned scanner. No offense intended, just can't stand the cigarette smell. Also, scanner must be in excellent condition and free of mods other than the basic cell mod. HF or nice VHF gear would be considered for a trade too.
This is a really nice tape drive and I am easy to work with and have traded on the news groups before.

Phoenix PD isn't trunked yet. They are are still using thier VHF/UHF
freq's. Rummor has it that the entire city will be going either digital
or analog TRS in 2000.

Mike,

Hark, Grayson, and Signal Pro all make devices that decoe Flex, Pocsag and Golay, unfortunetly you have to by the hardware as well as the software.

2174. Homeowner's Ass. & Antenna

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: allsafe <allsafe@netwit.com>
Message-ID: <35AD76B6.2257BF7F@netwit.com>
Source record: 152316

So what happened? You mounted your antenna on the
roof and now the homeownerï¿½s association is on
your butt about that *THING* on your roof muckinï¿½
up everybodyï¿½s view of the suburban skyline?

You think youï¿½ll have to take it down?

Maybe not.

Why not try a few of my tips for dealing with
homeowner's associations:

Homeowners associations traditionally serve some
sort purpose. However, I donï¿½t know what it is.
One of our ï¿½officers of the boardï¿½ said it had
somethinï¿½ to do with the upkeep of our ï¿½common
groundsï¿½:

ï¿½What common grounds?ï¿½ I asked.
ï¿½Down thereï¿½ he said, pointing to the end of the
block, ï¿½You see
that ï¿½Windwoodsï¿½ sign? Thatï¿½s common
ground.ï¿½
ï¿½That little patch of grass around that sign way
down there is our
ï¿½common groundï¿½?ï¿½ I asked.
ï¿½That it isï¿½ he said.
ï¿½We donï¿½t need an association to take care of
that;
all we need is a frigginï¿½ï¿½weed-eaterï¿½.ï¿½
ï¿½Now-now, we do other things too Tom.ï¿½
ï¿½Like WHAT?ï¿½
ï¿½Well...for example: There was quite a bit of
discussion during
the last board meeting about that antenna youï¿½ve
got on your roof .....ï¿½

Uh-Oh. Gotta stop this conversation fast. You
canï¿½t enter unprepared into a discussion like this
and hope to keep your antenna on your roof. What
you need to do is acknowledge the board memberï¿½s
concern and gently divert his attention away from
the antenna and towards any concerns *you* appear
to have:

ï¿½Uh... look Steve....Sorry to interrupt, but I seem to missing a couple of copperheads and I was wondering if youï¿½ve seen ï¿½em?ï¿½
ï¿½Copperheads?ï¿½
ï¿½Uh-huh.ï¿½
ï¿½As in SNAKES?ï¿½
ï¿½Yeah-yeah: Snakes..... Jeez, whadda I gotta do? Draw ya a frigginï¿½ picture?
ï¿½Let me get this straight Tom; Youï¿½re keeping POISONOUS SNAKES IN YOUR HOUSE?!?!ï¿½
ï¿½Well.....not anymore.ï¿½
ï¿½not anymore?ï¿½
ï¿½Well....duh. If I was still keeping ï¿½em at my house I guess I wouldnï¿½t be asking you ï¿½bout them, now would I?ï¿½ (Steve can be so stupid sometimes.)

ï¿½So now weï¿½ve got a couple POISONOUS SNAKES roaming the neighborhood? Do you have any idea how dangerous that is Tom?ï¿½
ï¿½I thought it might ruffle a few feathers.ï¿½ I said. ï¿½But I feel like I should ask you. Hell, it took me two days just to gather gumption to ask.....Hey!...THEREï¿½S ONE! Oops. Sorry; just the garden hose. Hey! Where ya going Steve!?!?ï¿½

When the board member departs, it would be a good idea to scamper inside yourself. Youï¿½ve got some work to do if youï¿½re going to convince the Homeowner Association to ingnore your antenna. Youï¿½ve got to make some changes. Bold changes. This is about power. You donï¿½t go to the homeownerï¿½s association; you make the association come to you:

DING-DONG!
ï¿½Well howdy Steve! What brings ya out on this fine Saturday morning?ï¿½
ï¿½Hello Tom. Listen, the boardï¿½s still a little concerned about that roof-top antenna, but theyï¿½re a little more concerned about some recent changes youï¿½ve made to your residence.ï¿½
ï¿½Like what?ï¿½
ï¿½Can you step out here? Thanks Tom. Look there; theyï¿½re concerned about *that*.ï¿½
ï¿½That?ï¿½
ï¿½That.ï¿½
ï¿½Aw hell Steve, itï¿½s just a little maintenance. The house came with white siding and black trim, but the trimï¿½s faded and itï¿½s real hard to match the paint now. I just went with a slightly different shade.ï¿½
ï¿½Florescent green.ï¿½ Steve observed, ï¿½your garage

door is *florescent green*. Look at it Tom. Can
you honestly say that ï¿½maintains the original
color schemeï¿½ of your house? Thatï¿½s what you're
supposed to do. Itï¿½s right there in your copy of
the bylaws. If your going to change the color
scheme, you've got to get board approval first.
It's that simple. But Tom, in my opinion, I can
tell you the board would have never approved
that.ï¿½
ï¿½Hell Steve, it ainï¿½t done yet.ï¿½
ï¿½.....You mean thatï¿½s primer?ï¿½
ï¿½Uh...no. I meant I havenï¿½t put the racing strips
and bald eagle decal on yet.ï¿½
ï¿½Oh Gawd.ï¿½ he said.
ï¿½Itï¿½s gonna look cool!ï¿½ I said.
ï¿½Look Tom. You simply canï¿½t do this. You may
think it looks fine, but other people are quite
adamant that your color scheme is going to lower
the property values. Thatï¿½s what weï¿½re here for,
to maintain the neighborhood and assure that
changes to residences donï¿½t adversely affect other
residents. Can you understand that Tom? Can you
try real hard?ï¿½
ï¿½Okay-Okay," I said, "Iï¿½ll re-paint the garage
door back the way it was. No need to get yer
panties in a bunch. Say...that reminds me, howï¿½s
that daughter of yours doing? I saw her the other
day and sheï¿½s really blossomed into a sweet young
thing. Hasnï¿½t she?ï¿½
ï¿½Yes. Sheï¿½s quite the young woman....ï¿½
ï¿½Have you been payinï¿½ her to wash your car?
ï¿½Cause if you ainï¿½t, Iï¿½d be glad to.ï¿½
ï¿½Now look here...you surely don't....ï¿½
ï¿½Of course I donï¿½t get to see enough of her with
my radio hobby and all.ï¿½
ï¿½.....Okay Tom, are you going
to take care of that garage door?ï¿½
ï¿½Sure Steve; whatever makes ya happy.ï¿½

ï¿½ok.....Goodbye Tom.ï¿½
ï¿½Buh-bye Steve!ï¿½

(Next installment: How to get the association to
ignore a sixty foot tower!)

2175. interception of pager messages

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: Eric Severson <"Eric Serverson"@mediaonegroup.com>
Message-ID: <35AD760F.8916BE04@mediaonegroup.com>
Source record: 152317

Las summer I was going to purchase the M400 from Universal Radio.
Other things came up, and I got out of the scanning hobby.
A year later, I went to the Universal Radio webpage and found this
warning:

NOTICE: Pending clarification of current telecommunications law, the
sale of this device is currently restricted to
qualifying commercial,
government or export customers.

I wondered "what happened?" So I search for news articles on the
subject
found this news item:

http://www.wirelessweek.com/News/Dec97/six128.htm

[Image]

From the December 8, 1997 issue of Wireless Week

'Pagergate' Feeds Concern

By Monica Alleven

Law enforcement and privacy-minded businesses may think twice about sending sensitive information over pagers after "Operation Pagergate" led to the guilty pleas of three men in New York last month.

"The unauthorized interception of alphanumeric pager messages is a criminal invasion of privacy comparable to wiretapping someone else's telephone," said Daniel Fetterman, assistant U.S. attorney for the Second District of New York.

Breaking News Network Inc. and its owners, Steven Gessman and Robert Gessman, and the general manager, Vinnie Martin, pleaded guilty Nov. 20 in Manhattan federal court to charges related to intercepting alphanumeric pager messages intended for the New York Police Department and Fire Department of New York.

BNN, which advertises its news-gathering and dissemination services on its Web site, is still in business. However, Martin said last week he could not comment on the case until the defendants' March 3 sentencing.

Prior to the NYPD investigation, code-named Operation Pagergate, New York police sent some messages via pager because they were considered too sensitive for police radios. The messages included the locations of high-level government officials and crime witnesses, the arrests and

suspensions of police employees and police mobilization points.

BNN, apparently with the help of defendant Jeffrey Moss, could intercept those and other messages. The company pleaded guilty to illegally manufacturing, assembling and possessing software and cloned pagers, and the three men pleaded guilty to intercepting alphanumeric pager messages sent between members of the NYPD and FDNY.

The company faces a maximum fine of $500,000, while the individuals each face a maximum penalty of six months in prison and a $5,000 fine on each of two counts.

According to the original complaint, Moss, a former BNN dispatcher whose case is pending, told authorities he cloned three pagers that intercepted police, fire and emergency services messages. Pagers may be cloned by duplicating the capcode from the original pager into another unit, so the clone is capable of receiving the same messages.

Moss demonstrated for detectives how he used a scanner, computer, upgraded version of "Message Tracker" software and a Motorola Inc. kit to intercept pages, the complaint said.

Authorities in New York said they believed the case was a first. Alphanumeric pager messages are protected under the Electronic Communications Privacy Act of 1986.

In announcing the charges, U.S. Attorney for the Southern District of New York Mary Jo White said the incident should serve as a wake-up call for public, business and law enforcement agencies who use pagers. "No governmental agency or business is immune from this illegal monitoring," she said.

Industry sources say most pager users remain unaffected. "It's not an issue for 99 percent of the people," said Robert Hoggarth, senior vice president of paging and narrowband at the Personal Communications Industry Association. He added, "I really don't care if you overhear my ... conversation about picking up milk for my wife or what time a meeting is going to take place."

I have browsed around this NG as well as the Ham NG and some of the Photo NG and they are all about the same.

There is only so much that a subject can be discussed and many times there is no clear answer because of the variables involved. All you have left are the opinions and you know what they say about those.

If it weren't for the new people asking questions that sometimes rekindles the flame (innocently on their part) there would be a lot less activity in these groups. Unfortunately, the newbies get scared off because of the BS and become lurkers as opposed to contributors. The contributors that are serious about their hobby get frustrated and stop contributing. I have seen this in the CB group in the past 9 months. This is truly a loss because new blood is being lost and the experienced are closing their doors.

However, thats life, people and some of what makes it interesting. It is a shame that more people don't let the trouble makers know directly that they are fed up with the BS or just ignore the posts all together. Heck, its easier to ignore someone here then it is on channel 19.

Some people take these NG to serious. They will not accept the fact that there are people that participate just to yank someone's chain. Ignore these people and be happy.

Reddog wrote in message <6ogtfp$f67$1@winter.news.erols.com>...

David,

>"Sorry but we cannot release the codes because of an agreement with
>ScanStar.
>They have developed the technology and sealed an agreement with us not to
>release the codes. I would suggest using the ScanStar software that comes
>with the Trakker and enjoy what we have available."

Yes, this is true. The problem here is that most of the decoding work is done in software. The radio demodulates the data bursts from the slow-speed handshake of the trunked channels, and makes this information available via the serial port. Then, how you interpret the data is up to you.
Different programs have different ways of doing things. One may do (2+2)*3 and another may do (2*3)+(2*3), so here it's the same.
You can get the specs for the structure of the data bursts on the net, so all you need to do is write software that will take the serial data, decode it into usable figures, and send commands to retune your radio (in case of the OptoCom, these are fully disclosed and available for everyone).

>I was planning to purchase one until I found this out. I fail to see why
>companies like
>ICOM, Opto, and other companies refuse to release codes for products they
>sell. It's
>like someone selling you a VCR and not telling you how to program it.
>Unless you
>can figure it out yourself, you are out of luck.

Opto release the protocol for their systems, it's ScanStar that is not. It may not be wise, but it's different to keep secret parts of the software algorithms that enable part of the functionality, than to keep secret the whole protocol, without which you cannot even turn on the radio.

>I purchased an OS-456 from Opto because they sent me the codes. If
ScanStar
>developed the technology for the OPTOTRAKKER, why not just give them a cut
>of
>the profits itstead of withholding codes that would generate third party
>software and
>boast sales.

They probably already do this. It's ScanStar's call, though. You may develop your own algorithms to decode, interpret, and use the raw data provided by the hardware, but they won't make it any easier for you, I can understand this.

Feel free to email me if you want to talk further on this issue, as there really are fundamental differences between the Opto and Icom products.

Best regards,

Mike

From: "Philip J. Smith" <psmith@appliedsystems.com>
Message-ID: <6oi8o7mkl1@supernews.com>
Source record: 152325

There are 832 channels in the cellular bands, divided equally among the (A) and (B) carriers. Cell towers use 30kHz channel spacing, beginning at 869.010, and ending at 893.970. Mobile units use corresponding channels 45MHz lower in frequency, from 824.010 through 848.970.

There were 666 original channels, covering roughly 870 through 890MHz. The extended segments from 869 to 870 and 890 to 894 were added in the late 1980's to yield 832 channels. Phones indicate to the cell site whether they are 666-channel or 832-channel capable while they are establishing a connection.

The two systems use the following segments for their cell sites:

System B: 869.010 - 869.970 (extended)
System A: 870.000 - 879.990 (original)
System B: 880.020 - 889.980 (original)
System B: 890.010 - 891.480 (extended)
System A: 891.510 - 893.970 (extended)

MY power of comprehension have never been in question, unlike yours. And how do YOU know I'm not a licensed amateur? Just because it isn't relevant to the purpose of this newsgroup?

Yes, Mackeloon, you truly are a credit to the amateur radio community. And your Mommy must be very proud of you, too...

Got the Q7 as a birthday gift but prefer to have a Trunktracking scanner.
The Q7 is one week old and other then taking it out of the box to look at it
it has not been operated. If interested in trade let me know.

Thanks

> codes for products they sell. It's like someone selling you a VCR
> and not telling you how to program it. Unless you can figure it out
> yourself, you are out of luck.

I do not find how this analogy is applicable to this situation.
VCRs are designed to be used by the public and features are added
AND ADVERTISED to entice you to buy them. Therefore, how to use
them can be found in the manual.

Where was the support for third party and Joe Customer to gain
these codes advertised? They weren't.

And please read the quote you received from Opto...especially in
regards to "They [Scan*Star] has developed the technology". Being
as such, the intellectual property for the software belongs to
Scan*Star. So be sure to direct any qualms you may have to them
as I'm sure Opto is under legal contract to not disclose the
details.

Looking at the past developmens of Opto, they developed the
OS boards for the RS scanners. They were, or chose not to be,
involved in the software realm. To garner support for their
product, they released the software protocol as I'm sure
they had always planned to do. By doing so, third party
software developers were free to support this hardware
which helped it to grow and prosper. It was a byproduct
that Opto had no problems for releasing the same details
to Joe Customer for him to write his own software.

Fast forward to today and we have a unique situation where
somehow, Opto and Scan*Star realized a market that was not
being successfully tapped. With the hardware expertise of

Opto (and GRE) and the software expertise of Scan*Star, they realized how they could get together and form a unique product with each contributing their expertise.

I'm sure there was all kinds of nice legal mumbo-jumbo involved to make sure each didn't disclose the "family jewels" of the other, which is what anyone would have done. They thus depend on each other and there is no reason to involve anyone else. It is a self-contained package which needs no other input to make it popular. The Opto boards were hardware only and needed software to become popular (if not simply useful in any form), thus the release of the protocol. This is not the case for the new OptoCom box. It was designed with software in mind.

Just because the Opto boards of the past supported the causal hobbyist and third party developers is no reason that all their future products should as well. If the software protocol was released, then it is my feeling that Scan*Star would loose all the money they put into its development. I highly doubt they are in the business to loose money.

Perhaps, at some later date when development costs have been recovered and a profit made, they will release the protocol to give the product a longer life. But for now, I can not see how anyone can expect them to simply hand over their development work for free. Does anyone here go to work every day to work hard for free and get nothing in return (other than any personal satisfaction from a job well done)?

I can understand the bitching that goes on behind the non-release of the Uniden and iCOM radios but find this situation TOTALLY different. Usually manufacturers make the protocols available to help their radios be as popular as possible by having the most support possible from the software industry.

And if anything needs to be said, it would be to Scan*Star. You can plead your case to them and I'm sure they'll tell you basically what I did above. You can convey your interest to write your own software or hope that in the future, that it might be possible to release the protocol for other developers to use.

This may or may not happen regardless and will undoubtedly depend on the state of their

business as well as the hobby itself and the
revenues that are being generated.

> I purchased an OS-456 from Opto because they sent me the codes.

This was a feature of the board and, I believe, advertised as
such. I hope I was able to indicate why this was necessary
at the time (to help the product to succeeed since Opto had
no plans of getting into the software business). The OptoCom
is a TOTALLY different case.

> If ScanStar developed the technology for the OPTOTRAKKER, why not
> just give them a cut of the profits itstead of withholding codes
> that would generate third party software and boast sales.

I'm sure that could have been done and was probably considered.
At this time, they might just think they can recover their
expenses faster by remaining the sole owner of thier property.

If this were done, you must also think that the price of the
product would have to be dropped or risk alienating users
who don't want to use the Scan*Star software. They want to
buy just the radio and use JoeSoft software to control
their OptoCom. In this case, buyers would be purchasing
the OptoCom hardware and really not paying anything for
the Scan*Star software...instead their software money is
going to another developer who didn't even create this
technology. Again, you're asking Scan*Star to give away
their development work for nothing, or almost that.

Dunno how this got past my Twit Filter. It's
supposed to respond to "Mackey" even in the
text part of the post. Apparently, it's
case-sensitive, so I'll have to put in lower
case variations and see.......

Anyway, I just had to compliment you on the above
UNDERSTATEMENT of the year!

> Yes, a VHF/UHF TV antenna will work quite well for a scanner.

Another GREAT truth, no less!

> Make sure it's turned vertical instead of horizontal

Right on, right on!

> and point it in the direction of the comms you want to hear.

Or....position it so that it reduces the strength
of signals you don't want to hear or which interfere
with signals that you do want to hear!

A TV antenna makes one of the best "notch filters"
at the lowest price you'll ever find. And it's
flexible. Use it to null out one undesired signal
today....and a different one tomorrow.....etc, etc.

Sometimes on a TV antenna, even a few degrees off
center will null a signal to virtually nothing and
still not affect signals you want to hear.

Ain't a thing wrong with plain old 'asskey',
that's for sure.....other than it's slower
than molasses in a winter blizzard.

> No urls

What's wrong with URL's? A simple click
can dispense with massive loads of redundancy,
not to mention make available hordes more
information than is otherwise possible for
the Usenet.

Ferinstance, how would you post a 100-MB
frequency file here? Or even a 10-MB one?
Okay, how's about even 1-MB? 100-kB?

A URL where the information already resides
saves on bandwidth AND makes more information
available to everyone on the newsgroup.

The only thing "wrong" about URL's is that
some people don't know how to use them yet.

They'll come around, though......

> No file attachments

Well, sure, that's one I won't argue, even
though an attachment of a good GIF or JPG
photo sure won't hurt anything, other than
the egos of those who don't know a GIF from
the syph.....

> Text baby, this is usenet. I (and others,
> I'm sure) come here for fast info,
> not things to click on, download, etc.

Others? Well, sure *some* others, maybe.
But it makes no difference to me whether
it's a text box or a URL. In fact, it's
a helluva lot easier to download a file
somewhere than to copy, paste, and edit
these goofy, poorly formatted texts that
a lot of people post. Let's take one of
your recent posts ferinstance:

```
=====
BASE HANDSET
---- -------
Channel 1 43.72 48.76
Channel 2 43.76 48.84
Channel 3 43.82 48.86
Channel 4 43.84 48.92
Channel 5 43.92 49.00
......... ..... .....
=====
```

I mean, hey, nice post and all. But geezus, man,
look at all that wasted space? And word-wraps
can mess it up all the more. Your formatting is
clear enough, but to be truly useful to MORE
people, it oughta look more like this:

```
CHANNEL BASE HANDSET
------- ----- -------
1 43.72 48.76
2 43.76 48.84
3 43.82 48.86
4 43.84 48.92
5 43.92 49.00
... ..... .....
```

And if you REALLY had maximal usage in mind
for minimal bandwidth, you'd make it look
like this:

```
CHAN,BASE,HANDSET
1,43.72,48.76
2,43.76,48.84
3,43.82,48.86
4,43.84,48.92
5,43.92,49.00
```

Nothing odd or unusual about "CSV" or plain
old comma-delimited 'asskey' and it's extremely
useful to ANYONE and EVERYONE.

Take a dork who doesn't know a database from
home base, he can COPY that block of text and
paste it into a text editor and REPLACE the

commas with TABS or spaces to restore the full
printable format.

But a guy who knows the power of a database,
can copy that same block of text to a file and
then export that file, as is, to a database
manager like MS ACCESS, MS WORD, Paradox, SQL,
Oracle, or whatever.....for some REAL
power and maximal utilization.

But if that file is a 1-MB hummer, ain't no
way you're gonna post it on the Usenet. A
URL to a Web or FTP site is about the ONLY
way for maximal distribution and availability
to one and all!

Now I bring all this up in response to your
'preachment' on:

> Text baby, this is usenet. I (and others,
> I'm sure) come here for fast info,
> not things to click on, download, etc.

Speaking for *yourself*, that's one thing
I won't argue or challenge.

But, hey dude, don't be speaking for ME.
I come here for quick and dirty stuff, too,
but I can use and get info out of a URL
and a file attachment a hell of a lot
quicker and more efficiently than out of
a half-assed, poorly formatted text block

In a word, a lot of the stuff you posted is
cool, good stuff, all right, but it's gonna
take a heck of a lot of work "behind the
scenes" to get any use out of it. UNLESS
a body just prints it out, as is, and then
LOOKS at the stuff. <gack>

Hells Bells, dude, we're in the computer
age now. The Usenet was established way
back when...BEFORE...the computer age, never
mind that it took computers to use it. The
premise and modus operandi of the Usenet is
flexible and upwardly scalable. Plain 'asskey'
text of the 1970's certainly still works.

But there are better ways now.....and the
Usenet is capable of supporting those better
ways, whether by clicking a URL or grabbing
a file attachment.....or whatever......

Don't get me wrong here....I think you posted
some good stuff. I just think you're not quite
up with the times in terms of fuller usage of
your computer. Frankly, I'd like to see all
the same stuff you posted in 'CSV' format.

Sure, CSV looks like hell, but it takes up less
space for one thing, and it is EASY to restore
most ANY desired format after you get the stuff
and get back off-line.

And for that matter, you could compile all that
stuff into an FTP directory somewhere, and just
post a URL to where it can be found. And then
you'd have saved a monstrous amount of bandwidth,
and done all of humanity a service at a lower cost.

And so while I see you're trying to "save" the
Usenet in one breath, I also see where you smoked
it in another breath.

IMHO. FWIW.

Source record: 152354

>Since reading about the comparative lack of reliable third
>party software for the Icom, the WinRadio and Opto look a lot more
attractive.

Yes. Icom seems oblivious the the damage they are doing to the
potential sales of this otherwise fine radio. Its a sad commentary on
they upper management of the company that they are so out of touch
with the marketplace.

>The reason I want the computer control is for the flexibility in
operation. I
>was also looking forward to dusting off my programming skills and
playing with
>someone else's code. This sounds too risky to try with the PCR-1000.
If all I
>can do is use the Icom software to run the machine safely like a
regular, stand
>alone scanner, I might as well stick with my basic setup.

You might want to take a look at the new AOR8200. If I could sell my
PCR-1000 for 75% of what I have in it, I'd invest in the AOR8200 and
consider it a lesson well learned. If I ever consider another Icom
product hell will surely freeze over.

>I want to buy from a familiar company with
>a long track record and a reputation for quality...

Ironically, that is EXACTLY why I bought Icom in the first place.
They had a "name" in the industry, and had won high regard for their
scanners and amateur radios in the past. I had no idea they would do
such a flip-flop with this radio. One of the reasons I post things I
have is to hopefully save someone else from similar disappointment. I
wonder if Icom really appreciates all I do for them? <smile>

>, so if Icom can clean up their
>act, they may still get my business.

A fair and rational attitude! Good luck in whatever you do. If you
(or anyone else) want one for say, around $375, give me a shout. Or
make me an alternative offer. I've still got the original box and
packaging. Radio is 7 months old, and has been 'retuned' recently by
Icom tech support. I'm about burned out on this whole ordeal though.
Time to shop for a good deal on an AOR8200.

Message-ID: <Zt6r1.351$pg2.637453@news.mci2000.com>
Source record: 152355

I'm considering purchase of the new AR8200 radio. Just wondering if the wealth of software that supports the AR8000 will work with the new version? I know it won't take advantage of any new features, but if the 8200 is a "superset" of the 8000, I thought maybe the existing software out there would work. Anyone know?

Thanks,
John McDermon

Many of the commands are the same and you will probably find some AR8000
sofwtare will work *to some degree* but not all.

With AOR's PC Manager for Windows for example it will read the Frequency
and you can tune up/down but thats about it. Most other functions will
not work properly. I havn't tried with other packages but using AR8000
software isn't really going to be a realistic option.

AOR will be offering their own package free that you will be able to
download but with the command structure being along the same lines and
also being available then I should think you will see several packages
arrive on the scene - some no doubt revised versions of existing
programmes written by owners etc.

Hope that helps.

Wrong! You are betrayed by your own words & by words of Bill Cheek.

According to the statements made, the following problems exist:
1. Incorrect polarization.
2. Possibly overloading the front end
3. Not hearing signals other than one specific direction.

> Make sure
> it's turned vertical instead of horizontal and point it in the direction of
> the comms you want to hear.

(Incorrect polarization)

You do have a point, but for small lists like the ones that have been posted here, ASCII text postings are a blessing. For instance, I often find postings refering to a great site for south-eastern cleveland area frequenies (30-100 frequencies no more), I get all excited hoping to get the info for which I have been searching for ages, only to find a 404 error, or a downed server, or if the server runs I get to waste time downloading banners and navagating a dificult site. On the other had, when an author posts the relatively small lists (you are right, big stuff is best left on web pages) everyone gets it, no 404s and no wierd pages to navagate.

On the other other hand: it is often nice to find a whole page to link to, becasue you will find a great data source with links to other data sources. Plus as you mentioned you can have 10mb freq lists on web pages.

BTW: I've read all your scanner modification books. :)

I purchased a 16 foot preassembled 75 ohm cable from Radio Shack and put a BNC adapter (also purchased at Radio Shack) on one end of the cable. The BNC adapter goes right in to the scanner antenna connection on my Bearcat handheld scanner. My TV antenna has a rotor on it, so aiming the antenna works great. It works great if you are after getting some distant signals.

When you hit FL, use the freqs located at
http://members.aol.com/mmahl1/scanner/irc.htm

Message-ID: <01bdafa6$a2913860$a464e7d0@default>
Source record: 152377

Does anyone out there know if the LA Troopers use the Motorolla I, II, or hybrid trunking system? I live in Louisiana and information on trunking in LA and MS is conspicuously absent in the my 1998 regional edition of Police Call.

Thanks in advance.

Joe

Rotate it 90 degrees (mount vertical instead of horizontal) and it will work a whole lot better

There have been articles in the local paper that they've added 3-way calling in our area, without really warning anybody and with a short time span, and the following scenario happens:

1. Bob's girlfriend, Lisa, calls him, gets the machine, hangs up.
2. Lisa doesn't wait two seconds, but promptly picks up the phone and calls Elmo, her secret love interest.
3. Elmo picks up the phone. The answering machine is added back into the conversation, but of course it isn't saying anything by now, the beep has long since passed, and it's ready to record.
4. Lisa and Elmo talks about what an idiot Bob is, have phone sex, whatever.
5. Bob gets home, plays the message, wonders where the heck it came from.

That might not be the deal in your case, but it's apparently been happening.

Doug

This scanner list is pretty good, but the list is over 10 years old.

Very helpful though.

METRO POLICE's now using channel numbers instead of letters (have been since 1984)

HPD is now on 159.120 MHz
NLVPD is operating on GE Erricson 800 MHz system.

If I went in circles (as Mackey does), it would be difficult to see what's around you. I would be paranoid too. Maybe that's his problem.

2267. Re: T.V. Antenna ---> Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 1998-07-15 00:00:00 UTC
From: Mike Derryberry <michael.derryberry@MCIONE.com>
Message-ID: <01bdafca$40aee420$691937a6@default>
Source record: 152409
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Ignore the reply from mackey ... he knows nothing about scanners or antennas.

Yes, a VHF/UHF TV antenna will work quite well for a scanner. Make sure it's turned vertical instead of horizontal and point it in the direction of the comms you want to hear. An antenna rotor comes in real handy so that you can easily turn the antenna for different comms.

Just remember, this type of antenna will have quite a bit of gain so be careful around high power transmitters as they will wipe out much of what you might want to hear.

Hope this helps ... Good luck

If you two decide to alternatly hop onto each others shoulder's facing your partner and say " I Love You Sweetie", would you PLEASE put a brick on the microphone PTT and broadcast it on 14.313 or 3894.5 for all to hear??

I'm sure the SWL's would go totally apeshit over such a presentation.

>
> Andy Ulrich

You can "listen" to it but you can't track the signals
as they switch. The beeps/buzzes of the Ericson system
will drive you nuts after a while though...unless you
add a G/Wiz board.

For details see http://www.scannermaster.com/prod05.htm
Note, this only eliminates the annoying sounds and
allows the scanner to continue scanning. It will NOT
track the trunked channels. One problem with monitoring
EDACS without it is beeps are transmitted after every
conversation and on the unused channels, making it very
difficult to follow the conversation. This board will
certainly help.

Ben--
You need a GPS receiver (who doesn't)--they provide very accurate time references. Also PCS digital cellphones (like SprintPCS) provide time derived directly from GPS and are hence very accurate as well.

Legion

Ben Fairbank wrote in message ...

I have two 800 mhz Motorola Smartnet/Conventional consolete desktop X-9000E base stations for sale.

Best offer (around $600/e) or trade for MT2000 series UHF (403-470 mhz) radios. Would trade both for a flashport (full keypad) MTS2000 800 mhz with at least Smartnet flash.

Units are secure capable and I will supply a secure board and DES (not XL) module with each.

I do not have manuals but have spec sheet. I think these are 12 watt X9000E guts. Manual is available from Motorola.

Thanks for your interest!

spencer12345@msn.com

You know, about 10 years ago there used to be a BBS program called PCBoard. Well, there still is, but that's beside the point. Anyway, they were limited to 9 conferences (newsgroups). The instructions said that if you wanted more than that, you probably weren't adequately serving the needs of your users. Shortly after that, there were boards with hundreds of conferences, and my ISP is carrying some 20,000 newsgroups. As I recall, back on those bulletin boards they're STILL hollering about people who post ANSI colour messages or (GASP!) a PGP signature. Well, the Internet came along and is about to pass them all by. They've been forced to change.

BTW, my newsreader is ASCII and doesn't like HTML, so I search for the URL and open my browser. No, you won't catch me there, either, because I use both Microsoft and Netscape.

2303. can I tap the discriminator

Newsgroup: rec.radio.scanner

I have a radio shack pro-2032, and I want to tap the discriminator. I have glanced at Bil Cheek's article. In the article there is a list of scanners, and pins and such. I however do not see my scanner. I realize I can just open the unit up and see if the nfm chip type matches one listed. But I was curios whether or not anybody had any experience with this operation on this scanner.

>posts made!

No, squiggy, we're left to conclude that you are either too lazy or too stupid to go find what it is you're looking for. Try and focus on the fact that it is YOU that is asking for information. You either don't remember (or, more likely, are pretending not to remember) the posts that refuted your silly theory. So, since it's YOU who needs to be reminded, the onus is on YOU to go find them. Now, is that so hard to grasp .. even for you??

Try these:
Westgate Mall Security 151.895
Great Northern Security 154.54 / 462.1625
Euclid Square Mall Security 461.1125
Richmond Mall Security 461.2375 / 466.2375
Randall Mall Security 461.4250 / 466.4250
Jacob's Field Security 424.7250 / 429.7250

These came from a 2 year old list and have not been verified. If any of
them pan out, please post your findings.

Enough already.

I've been watching Mr. Cheek since back in FIDO NET days. In all that time, I don't recall ever using a gratuitous insult, excess profanity, obscenity, or other such tactics. I've never used homophobic references to him, or done sophomoric takeoffs on his name. I've tried to keep my posts factual and to the point. I've tried to document everything I've said if possible.

In return, in addition to what you've all been able to see here in a public forum, I've been subjected to harassing, vitriolic e-mail. I've been mailbombed, had forged messages posted in my name, and have been threatened with various and sundry nastiness, culminating in a recent death threat.

Well, I may be a bit slow, but I do have a few remaining functioning brain cells, which are telling me that my job is done here, and that I'm only wasting my time with any further tilting at this particular windmill. Mr. Cheek will no doubt bluster about how he's won the battle and has chased me away. Fine. Let him rant, if that makes him feel better. It all pays the same, as they used to say in the Real World.

Goodbye, Mr. Cheek. It's been educational for me and, I suspect, more than a few of the readers.

2313. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-07-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6olldb$ka1@news.Hawaii.Edu>
Source record: 152133
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Of course, I'd caution users to remember that Mike Amato's list is what *Mike* needs to make the USENET more enjoyable for him. Nothing wrong with that. However, I'd caution any new users to examine all the posts before deciding what or what not to filter. It may turn out that you agree with Mike's choice of filter patterns. Or you may find that you don't. But two things are clear.

(1) Adopting Mike's filter list doesn't only remove "nonsense" from your screen.

and

(2) But it does remove what Mike doesn't like.

Be like Mike? Maybe. But spell the names correctly, it'll do wonders for your filtering (derryberry, eisher) And "Eisher"? Isn't that Robert Eisner or something? I can't remember the spelling of the last name. Isn't that the fellow that runs WHOIS results whenever he discovers rouge cancels? Aside from his topical posts, all he does is post information about rouge cancels when they occur. And he does it for *anybody* who asks. That's a real class act. What exactly did *he* do to get on this list? I think you screwed up Mike. I don't think that was fair to Robert Eisner.

That's the problem with you people at Raytheon these days. No attention to detail. *That's* why you keep losing bids.

"Raytheon Systems Company, Falls Church, Northern Virginia - Where productivity is second to allowing employees to post to the USENET on our dime."

2326. Hit him in the wallet

>I have offered & requested SEVERAL truce plans to end the problems here
>on this NG, but Cheek has declined them all. His reason was that
>one of the conditions was "No flamming, attacks, or nasty messages".
>

And that's one of the reasons I decided to hit him in the wallet. I just wish I could get to the other guy the same way.

I thought about building a dataslicer circuit, then applied my usual test: can I buy it from somebody cheaper, if I value my time at $15.00/hour. So I thought about buying one from Cheek. I appreciate his TECHNICAL contributions to this newsgroup and the hobby, and I would usually use that as justification to do business with somebody. But there's no way that I can condone childish acts, nor can I bring myself to reward him for them. So, maybe if he loses enough business, he'll stop the nonsense.

Hopefully, these thoughts will spur others to also consider carefully where they spend their money.

several years ago i found (from this ng i think) some sw that took output from a scanner to the line input on a sound card and decoded the fire dept paging tones it heard. it also would "close" the speaker until it heard the tone you specified. does anyone remember this and know where i can find it?? thanks chris

2329. 800 xlt dim light

The scanner works properly but the display light is very dim...What could be the cause and how could the problem be corrected?

2330. headphone impedance question

Newsgroup: rec.radio.scanner
Date: 1998-07-16 00:00:00 UTC
From: jscarfone@my-dejanews.com
Message-ID: <6om3ms$4fv$1@nnrp1.dejanews.com>
Source record: 152150

I have a BC 235XLT and a set of racing headphones. I want to get another set for my wife so she can listen too. The headphones have a mono plug with the sound split left and right inside the headphone circuitry. The scanner will also duplicate the signal to allow the use of traditional stereo headphones so I was planning on just getting a stereo to dual mono adapter and plug them both in. I'd like to get feedback on the ramifications of this. Can the scanner and headphones take it. I have a little chart from the scanner manual:

Audio Output
180 mW into internal 8 ohm speaker
30 mW into 32 ohm stereo headphone
8 mW into 64 ohm earphone

The resistance of the headphones ranges from 16 ohms to 1k ohms depending on the setting of a volume control on them. I'm guessing this is a rough estimate of the impedance. What does what I want to do with the two headphones "look like" to the scanner in terms of impedance. I'm assuming this will approximately double my current drain.

I'm really getting into this new hobby of mine. Thanks for any suggestions.

The only thing that I can think of to record sound off the pro-37
is putting a small microphone in front of the speaker and then tape it
down. and then tape down a small piece of paper behind microphone to
isolate the microphone from backround noise. The only frequencies
for that area is the California Highway patrol you can get the frequencies from

Another groundbreaking technical article flows from the tiny mind of "Mr. MacKey" <KAOSSF@PARG.ORG>:

>You were talking about TV antennas. By doing what you are talking
>about,]
>it is no longer a TV antenna, is it?

It's still an antenna designed for TV reception, Einstein. I have a cellular antenna on my car that I also use on my scanner. If that makes it no longer a cellular antenna, then why am I able to use it on my cellphone?

>Yes, then you rund into loosing the weaker signals from other directions
>don't you?

Yeah, whatever "rund" and "loosing" mean. If you'll look at the post this refers to (and no, snotnose, I'm NOT going to look it up and post it for you) you'll see that this was a reference to nulling out UNWANTED signals. You friggin' idiot.

Just like the story about the warrant , mackey is passing all the blame on obfd .
It shows now that mackey and obfd fabricated the whole story, in fact mackey is the one most likely to have done all of the fabrication since he was the first one to bring it up in the newsgroup, just had obfd backing him up to make it look good.
It seems pretty strange that obfd has disappeared off of the newsgroup and has not responded to any of the post.

> about, it is no longer a TV antenna, is it?

We are talking about taking an antenna originally designed for one
purpose (television reception), and in the spirit of inexpensively
enjoying a hobby, use it for another (scanner reception). The new
application could care less whether or not it started life as a
television antenna. To quote my paper posted to the original questioner,
you end up with the following:

Using a television antenna in a scanner monitoring station offers a
reasonable cost to performance trade-off for the scanner listener.
You get coverage of the 50 to 270 MHz and 420 to 940 MHz frequency
ranges, high gain, good front-to-back performance, and directivity
using standard inexpensive TV rotator systems. Obviously, not all
antennas available will perform the same in all locations. But for
the price and ease of use, the television antenna will provide
many happy scanning hours.

> > Exactly ... that's why the rotor ... so he can position the antenna
> > where it works best. If you look at the origional post it was stated
> > the writer
>
> Yes, then you rund into loosing the weaker signals from other directions
> don't you?

Since it is *desired* to use the antenna in a directional manner,
loosing
the weaker non desired signals is no longer a problem. If the user does
want to hear those signals, turn the antenna towards them.

> Next time, Mike, please read and understand before typing.

Yes, Toilet Boy, you keep demonstrating your total lack technical skills
each time you open you ignorant mouth. You're still a technically
deficient

FOOL and a friggin' loon.

Rich,

>If this were done, you must also think that the price of the
>product would have to be dropped or risk alienating users
>who don't want to use the Scan*Star software. They want to
>buy just the radio and use JoeSoft software to control
>their OptoCom. In this case, buyers would be purchasing
>the OptoCom hardware and really not paying anything for
>the Scan*Star software...instead their software money is
>going to another developer who didn't even create this
>technology. Again, you're asking Scan*Star to give away
>their development work for nothing, or almost that.

I wrote to Scan*Star, and they tell me they are bundling a 'Lite' version
with the OptoCom, which will miss some of the advanced features, but have
full support for the OptoCom and trunk tracking.
They more or less said that they weren't making any money on it at all,
so...
As far as ICOM goes, their business is to sell radios, not software. Opto
sell radios, but the software is done by someone who has years of experience
at what they do. ICOM decided to do it 'in-house', which is a real shame...

Mike

I never made the statement that Cheek molested the boys in San Diego.
Infact, I stated that unless proof could be shown then we should
consider
it as hearsay & ignore it. If you want your proof then contact Nick
OBFD
YOURSELF. Let us know what you find out!

> I know your going to dance around with some other excuse or lie for not
> doing so.

I didn't dance around it at all I sent you to the source, which is NOT
me!

> You know there is no fact in your accusations and innuendo and that is
> the reason you keep dancing around the truth.

The accusation I made was that without proof we should consider it
as heresay & ignore it. So now you are stating that my statement is
WRONG
& that we SHOULD consider it?

> If you can't show proof of the warrant you could at least show the
> source you got it from.

In my opinion, if proof of the warrant can't be shown then then
whole issue/accusation should be dropped. Remember, in this country
you are innocent until proven guilty. Cheek has those rights too!

While I have some differences with Cheek, I resent your attempt to
continue to stir up this issue to make him look guilty.

I recently purchased a RS Pro-2041 scanner and a RS 5-Band Omnidirectional Outdoor Scanner Antenna (20-042). I'm using RG-6 cable. I'm very happy with this combination.

However, I'd like to be able to run cable to a couple of different rooms in the house. Would the use of a 2-way splitter degrade the performance in any way? Are there better options?

TIA ... Brian

Thats interesting! I didn't see any EDACS Trunktracker from Uniden at the Dayton Hamfest. And Uniden has said that they have no plans in the near future to make one. Only thing that will decode EDACS that I know of is ETrunk.exe at : http://www.geocities.com/CapeCanaveral/Lab/1060/trnkv3x.htm
IMHO

Nope. Richard was offering an objective opinion. As an observer. That's really all you have to do: just watch what you do for a while. It's not a question of *if* you're a loon; the real question is "how many of your posts does the average reader need to see to conclude that you're a bone fide loon."

BTW, that "Society for Prevention of SPAM & Promotion of Peace" thingy is a riot. Ya better be careful. Ya know the last savior was crucified.

ya friggin' loon.

What happens when you connect a "Y" to a garden hose
and turn the water on? 50% goes one way and 50%
the other way. If you used a 3-gate, then 33.3%
goes to each leg.

Likewise with splitters....guaranteed degradation
of performance.

> Are there better options?

A separate antenna for each room?

Otherwise, take your losses (no pun intended) and
live with them.

No you are wrong John ... Look at what the origional post was ...

> According to the statements made, the following problems exist:
> 1. Incorrect polarization.
> 2. Possibly overloading the front end
> 3. Not hearing signals other than one specific direction.

I think I addressed all 3 of these concerns in my reply ... read it closely
..

> > Make sure
> > it's turned vertical instead of horizontal and point it in the
direction of
> > the comms you want to hear.
>
> (Incorrect polarization)

How do you figure "incorrect polorization" ??? I told him to turn the
antenna vertical which is how radio comms are polarized. Didn't they teach
you that in 'ham school' ?

> > An antenna rotor comes in real handy so that
> > you can easily turn the antenna for different comms.
>
> (directionality)

Exactly ... that's why the rotor ... so he can position the antenna where
it works best. If you look at the origional post it was stated the writer
had moved to a rural setting which most times he may be trying to listen to
distant comms.

> > Just remember, this type of antenna will have quite a bit of gain so be
> > careful around high power transmitters as they will wipe out much of
what
> > you might want to hear.
>
> (overloading the front end)

Just what I was talking about only I didn't say "overloading the front end"

And Bill's response is self explanitory. Next time John, please read and understand before typing.

> Bill Cheek wrote:
> > Sometimes on a TV antenna, even a few degrees off
> > center will null a signal to virtually nothing and
>
> (again, directionality)

The only reason I know of the errors on the list is because I spend time on the central coast (San Luis & Santa Barbara counties) monthly. Many of the freqs I saw on the posted list have not been used in 8-10 years.

I never said I was smarter than anyone else, I'm just in that area listening quite often. The poster may not have been to that area or checked for updates recently.

Hi David,
I didn't think it was a contest ;-) You voiced your thoughts
and I did the same with mine.

> I guess I'm tired of buying items with computer interfaces and not
> being able to control them using my own software without fighting
> to learn how to interface to them.

Tough to keep up with the changing times isn't it? ;-)
Probably gives you a great appreciation for programs like
Scancat and such that support a LOT of radios!

> You make a valid point about taking my complaints to ScanStar,
> but I seriously doubt that it would get anywhere.

Agreed. I tried to make that point that it wouldn't be in
their best interests to what would amount to shooting
themselves in the foot.

> To be fair Opto has released information on its other products.

Agreement here as well. Opto didn't pull a PCR1000 or
BC895XLT on this one. Well, we hope they didn't pull a
PCR1000 where the radio could be damaged due to miscommunication
with it. Have to wait and see what develops when it comes
out.

And just like all the other secretive radios, there will be
those who just have to know how it ticks so they'll hook
up a line analyzer, put the program through its paces and
figure out what the protocol is and post it on the Internet
accordingly.

If we're lucky, the OptoCom won't use the lame-brain
approach chosen by iCOM so we'll be able to freely send
data to the unit without worrying about trashing it.

So I think you'll get what you want. Just not in an
official capacity.

> I'm basically venting my frustration about the current
> state of the radio industry (Ham included) when it come
> to computer interfaces.

Understandable. Hopefully, as this interface 'stuff' gets more time under its belt and the radio companies hear our complaints over and over, things will turn around for the better!

Hi Miguel,
Thanks for the info! That's an interesting approach...I wonder
what the cost savings will be?

> As far as ICOM goes, their business is to sell radios, not software. Opto
> sell radios, but the software is done by someone who has years of experience
> at what they do. ICOM decided to do it 'in-house', which is a real shame...

I'll agree with that. They definitely jumped in over their head
and I don't think ever had plans to really support the software
end when it came to third party players. iCOM has given the run-
around to every third party software company that has applied
for the protocol that I have talked to. So they either don't
want to really support this issue or they're waiting for that
right one who they will bless and make the only other option
for their customers.

> appreciated.

Hi Ryan,
Congrats on the new radio! As for receive range, that depends on
who you listen to (or want to) as well as the performance of your
radio. You can increase reception somewhat by using a large indoor
antenna. Radio Shack sells an extendable whip with a loading coil
for base stations. It comes with a Motoroal F-type plug so if you
do buy it, you'll need an adapter which RS also sells, to convert
to the BNC type your BC860 needs.
Your next option is to upgrade to an external antenna and then
you'll have considerations for mounting, choosing a good quality
co-ax cable and lightning protection, etc.
So your choices depend on how much time and money you're willing
to put into it. The more you do, the more you'll hopefully be
able to hear. Best of luck!

I don't have a PRO-37, but just a guess would say:
LINE OUT or HEADPHONE JACK from PRO-37 to MICrophone on tape recorder.
If the tape recorder has VOX (vocie activation), you can see how well
that works for you, otherwise, just let it continuously record.

> I should consider?

Sounds like the 20-006 which is a good antenna; especially for that
price range. For others, you might want to read over my handheld antenna
review : http://www.strongsignals.net/htm/rev_hant.htm

> Second, this scanner was a gift and my first scanner. How does it rate?

Let's put it this way : it is on the lower end of the scanner hierarchy.
It is missing two of the "normal" bands...mainly VHF aircraft (118-137)
and 800MHz (806-956). It is kind of pokey in the scanning and searching
speed department. And a big limitation is that it has no programmable
search...just a band search...which is a pain to use and not very
efficient.

> I mean, I get all the police, fire, and neighbors that I think I can get, but I
> have yet to pick up anything outside of these frequencies (154-160 MHz, 46-50
> MHz, and 460 MHz bands).

Go to Radio Shack and pick up a copy of Police Call Plus to learn
where all the other popular stations are in your area. You might pick
up more in the 37-38, 39-40, 42-43, and 453-454. And since you have
no 800MHz, you might be missing something there as well.

> Is it just that there is little to hear outside of these frequencies
> or is it that my replacement antenna is not up to par?

There's pretty much something to hear everywhere but it might not
suit your particular interests. There are ham band, and lots of
business frequency ranges. You have no aircraft band so you won't
be able to listen to those.

The Radio Shack PRO-28 is pretty much a clone of your BC60 which
is made for them by Uniden. Try the Tandy PRO-28 scanner page
and read the section titled 'Guide to Scanning' :

http://support.tandy.com/support_electronics/18844.htm

That should give you some more agencies to check out. To learn
more about the hobby and monitoring, you might want to check
out both of my pages listed in my signature as well as my
Getting Started page :

http://www.strongsignals.net/htm/starting.htm

Best of luck with the new radio and happy monitoring!

The latest I heard (4/1/98) was that Phoenix and Mesa will definately be going to a digital trunked system within 3 years. I believe one of the Phoenix-area newspapers had a story on it.

Ari -

In trunking mode each conventional bank can be used for a system with
up to 30 frequencies (10 systems total), but only one trunked system
can be scanned at a time.

Each system can have up to 50 IDs (logical channels) stored in 5 banks
of 10 (logical banks), but you have to select and enter the IDs in
search mode. In trunk scan mode all IDs that show up which are not
stored are ignored (locked out). Any of the stored IDs can be
individually locked out and ID banks can also be locked out.

Message-ID: <6ol2fh$9ol4@fcserv3.fcd.esys.com>
Source record: 152256

There is really no reason to complain about the nonsense which goes on here if you have a news reader which can implement filters. Just place the following words in the filter and the ng is as it was a year ago.

mackey
cheek
kendrick
smalley
allsafe
KAOSSF
KA0SSF
faricy
wizzard
quarnstrom
eisher
derryberry
dwenger

I use Outlook 98 which can filter on either sender or subject. Every so often a few still slip by, but they are usually easy to identify.

I own a PRO-51 that is old enough that the keyboard tricks work. It is pretty good but the image problem due to the double conversion is pretty significant in the target rich environment of Northern Virginia.

I'd use a coax switch if at all possible, it will lose about .5db (5-15%,
less if you buy the high priced "High Isolation" pushbutton switch) as opposed
to 3db or more in a splitter (that's 50% of the signal, as db's are
logarithmic).
If you want to be fanatical about loss, use an F-81 bullet connector and
change the connection every time..... ;)

Even though it's theoretically the "wrong" polarity, simply splitting your TV antenna cable and running it to the scanner may be much better than the built-in antenna. It's worth a try to see what it does.
TV antenna design is a horrendous compramise of many conflicting factors & there is more vertical response in a broadband TV antenna than there might be in a "classic" narrow band yagi or dipole. Polarity theory is mostly based on simple variations of the yagi/dipole antennas, and as a rule the broader the bandwidth and the larger the array, the more off polarity response you might see.
For folks who can't justify the expense of a separate support structure, a poor polarity match is better than nothing outside at all. And it only costs a fed dollars to try it.

I have a question for ya! I have two antennae on my car, one for my CB
one for my scanner (actually people slow down when they see my car
thinking its police hehe) and I wanted to try coupling the scanner
antenna and the cb antenna and hooling them up to my CB. Would I get
better reception with the dual antennas or worse? Yes, my Scanner
antenna does have a segment of 1/4 cb length.

I would like to buy a working plectron or motorola alert box, or a Motorola Voice Pager such as a Keynote, Director, or Minitor that can be used with a fire department.

I would like the Radio to be set as follows:
Radio Frequency: 154.175Mhz
Tone Frequency: 643-495,8

Thanks for any help you can give. Please send your price, model number, and specifications to LFDGAJR@aol.com.

Thanks,

2434. BIG TV Antennas @ Vertical P

Newsgroup: rec.radio.scanner
Date: 1998-07-16 00:00:00 UTC
From: neutrodyne@aol.com
Message-ID: <1998071615592100.LAA11156@ladder01.news.aol.com>
Source record: 152264

I find myself in posession of some big long TV antennas that I don't have much investment in. ... (Check the local Radio Shack Boys! The bargains in discontinued TV antennas start under $10!!!!!).

Has anybody turned vertical an antenna as big as a RS LP-190 (150" long), an LP-210 (180" long) or a V-185 + U-100 (180-190")? I realize I'll have to reconfigure the boom brace. Would a guy wire in a vee configuration from 5' above to each far end of the antenna help a lot? Also, does the difference in wind loading (or am I an idiot for thinking it is different?) go up beyond what a normal rotor or pole can handle? I've only tried this with very short cheap (K-Mart $10 specials) antennas and all the longest elements have fallen off in short order. Is this because of stress being in different directions, or just the junky antennas I tried? I am in a windy location that does tend to munch up antennas when they are mounted as designed..
I have a 90" long Winegard I could use for the scanner (and one of the the RS ants for the TV's), but it is harder to turn vertical because of the insulation & feeder system + doesn't have as much gain.
Has anybody used a treated 16' 4X4's instead of antenna masting for a main mast? It's cheaper and seems stronger (I couldn't walk my 250 lbs. across a 16' span of antenna pipe without beding or breaking it, but I CAN with a 4x4). I had also considered treated 2x4's from the rotor to the antenna (as an insulated support). Cables & rotors don't seem to live much past 4-5 years anyway, so good paint should give similar life for the wood, if it doesn't break.
I figure there's no use re-inventing the wheel or learning this stuff won't last 2 weeks by finding it poking holes in the roof some morning....
Thanks for any experience you can share.

I have not known Bill Cheek very long, heck I don't even really know him, just his posts to the newsgroups and many contributions to the scanning hobby. Having said that, I will say that from what I've seen in the last 8 months I've been on the newgroups I have never seen Bill flame someone without warrent.

Sure I don't always agree with his comments and how he handles things, but it's not for me to say how he conducts his like. Maybe you think he has gone overboard in his "comments" ... maybe so ... but who are you or I to sit in judgement ???

I don't condone most of the crap that goes on in this newsgroup, but I have the option of not reading it or ignoring it or using filters. I think most people in here are big boys (and girls) and we can take care of ourselves. If sombody stirs my pot and pisses me off, you bet I'm going to jump all over them. Why should I or anybody else expect Bill to do different.

I'm sorry you're unhappy with Bill, that's your right. If you want to boycot him that is your right also. Just don't expect me to take part as I will have nothing to do with a boycot. And just because you are upset don't expect the entire newsgroup to boycot him, they also have their own opinions.

Just my 2cents ... I'll shut up now ... Good luck ...

Mike

2444. Question: Pro 2042 Blocked Cell Freqs

Newsgroup: rec.radio.scanner
Date: 1998-07-17 00:00:00 UTC
From: gaross@my-dejanews.com
Message-ID: <6oo01l$u1s$1@nnrp1.dejanews.com>
Source record: 151974

I just bought a Radio Shack Pro 2042. I know that it cannot get cell frequencies because they are "blocked". On my RS pro 2039, I get cell conversations but when I tune the Pro 2042 to the same frequency, I get nothing. I thought that the Pro 2039 was blocked also. One specific frequency that I've checked is 851.325(5).

Are the specific cell frequencies blocked or is the whole band blocked. I thought that it was the band and that I couldn't tune to the band. I can tune to the frequency but don't get the same conversation that I get on the 2039.

What gives?

Geo.

Off the top of my head I come up with :
BC9000XLT
BC890XLT
BC895XLT
PRO-2045 (discontinued but might be a few around
or you can try a Canadian company where
this radio is still selling strong)

Or you can join the 90s and get a computer controlled
radio with a software package that will give you a
LOT more than just a hit count ;-)

Just to add my 2 cents. I have ownded an ar 8000 since it came out and have been very pleased with it. So now aor has a new scanner and I am looking with baited breath. My point, why didn't they include some kind of trunking option on the unit. With so many of the systems turning to trunking given the price of the unit it seems they would have included this. I really cannot justify spending the kind of $$$ they are asking when so many radio systems are turning to other means of transmission such as trunking and digital.

I haven't had any problem - I had the county trunking freqs in three
banks with a different fleetmap for each, trying to find the
appropriate map.

The old gang of flammers must be at it again. I haven't seen any of it because I make extensive use if the filters in Agent. Out of curiosity I compared my list to this one and find that they are very similar.

The Pro 2036 and BC 895(i think-the model just like the 2036) have the count feature. It is a great feature for non computer controled radios. Ira

I have a very good Pro2004, bright display, 400 channel mod, 800Mhz mod and speed mod. No manual, though.

$225 plus shipping.

The current model Uniden/Bearcat BC9000XLT has a hit counter.

The old Electra/Bearcat BC300 and Regency K500 have hit counters, too.

2467. unknown Zener diode

Newsgroup: rec.radio.scanner
Date: 1998-07-17 00:00:00 UTC
From: Wild Bill <kwag98@tcis.net>
Message-ID: <01bdb188$c9a5d940$e4551bd0@p75>
Source record: 151997
Cross-posted to: alt.radio.scanner,rec.radio.scanner,sci.electronics,sci.electronics.components

hi.. i've been unable to locate any info about a diode, and haven't been able to cross reference it.

Under test it starts to conduct at 61 volts which is definitely wrong for the application. It's located in a nicad battery pack for a Uniden Bearcat BC 100XLT scanner.
The device number is HRP22 and the circuit designation is D603

If anyone has a schematic for the BC 100XLT or a Radio Shack PRO 35, i would be grateful to have any info about this diode.

Thanks
Wild Bill

Hello

This is what I call a really BUSY airspace!
01h40m listening to 4 different frequencies and...62 flights...1 flight/85 seconds!
And taking in account each flight gives 1 report each 30/40 mins...
Spectacular radar view of the North Atlantic with the highly organized track system of Gander/Shanwick.
Interesting to see the route crossings between flights from the Caribbean->Central Europe and North America->South Europe.
Excellent HF conditions on all frequencies monitored (5649,5616,5598,6628 KHz).
In conclusion: one of my best logs ever with many new registrations.

If can see a radar-view of the North Atlantic Airspace when the log was created by downloading:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex11.gif

Hope you enjoy the log.

Best regards, Andre Brandao

2474. Newport, RI police on UHF?

Newsgroup: rec.radio.scanner
Date: 1998-07-17 00:00:00 UTC
From: netc4524@aol.com
Message-ID: <1998071716060200.MAA27950@ladder01.news.aol.com>
Source record: 152004

Recently I noticed that the patrol cars in Newport, Rhode Island now have an additional antenna on the trunk lids. It is center loaded and appears to be a UHF antenna. The old VHF antenna is still there and they are still using 155.730 as their main frequency. Could this new antenna be part of the new MDT's that they were soliciting bids for last year? One more question.......whatever happened to Channel 2 (155.685)? It appears to be no longer in service. And does anyone have the frequencies used by the Attorney Generals Strike Force?

Thanks,

Mike Grossman
Newport, RI

PALM BEACH COUNTY FREQUENCY DIRECTORY AND SCANNER LISTENER'S GUIDE

"Your book is OUTSTANDING"
- PBSO deputy

Tired of outdated lists? Tired of buying a frequency book only to find that it reads like a phone book? Tired of not knowing the correct frequencies to listen to?

Well, no more! Containing the most accurate frequency information available on Public Safety agencies in Palm Beach County, FL, the is THE scanner book you need! Included in this Second Edition:

- Frequencies for FIRE, POLICE, EMS, PUBLIC WORKS, MEDIA, BROADCASTERS, AIRPORTS, and AMATEUR RADIO.

- Frequencies are listed in two sections: by SERVICE and by FREQUENCY

- Detailed information, with receive & transmit frequencies, complete channel descriptions, CTCSS codes, and FCC callsigns

- A comprehensive listener's guide, with information on which agencies cover the various cities, which channels are used, 10-codes, signal codes, Sheriff's Office district maps, EMS district maps, MED-COM Radio system, PBIA runway map, Florida Scanner laws, and a huge glossary of radio lingo & terms.

- Now includes a Trunk Tracker (TM) section, with frequencies and ID's for the Public Safety trunked systems in the county

- PLUS, included with each book is a condensed frequency list, a 1-page list of ALL Public Safety agencies in the county, including Trunk Tracker (TM) codes. Perfect for portable use!

Whether your're a resident of Palm Beach County, or just a visitor, this is what you need for complete Public Safety monitoring!

Only $9.95 including shipping.

SPECIAL OFFER! Buy the Palm Beach County book and South Florida Trunking Guide together for $17.95!!

E-mail me for ordering information (remove the NOSPAM from my e-mail address)

scanner
> and non-VOX recorder to only have it record when there is a squelch
break?
> I know there is a device called ScanRecord, but I can't find it anywhere.

Those types of devices are sold by about 30 percent of the
mail-order "spy supply" type companies. You can search out
some of these companies web sites they have these items
online including the VOX control. However, might I add that
you require a special recorder to use these devices. It must
have a control jack a.k.a. remote activation jack, etc.. (which
is usually a 1/32nd inch jack on microcasette recorders and
sometimes a 1/8th inch jack on larger recorders.)

If you cant find the companies on the World Wide Web (they will
send you a catalog in the mail usually) then I'll e-mail you some
mail order company names if you want. Dont remember the
addresses offhand.

AKG is one of the big wireless microphone producers (they also make
excellent wired mics.) Their homepage is at
http://www.akg-acoustics.com/

One dealer of said equipment is markertek, available at
http://www.markertek.com
but pro-audio stores should have the models you're looking for.
800+MHz mics are UHF and probably diversity, so they're gonna run over a
thousand dollars for the setup, most likely.

VHF wireless mics are cheaper and work almost as well outdoors. If you're
going to be inside, though, in a large building or convention center,
there's no substitute for a good diversity UHF system. ($$$)

US-delivered mics may use different frequencies than those used in Europe.

Location Sound in Los Angeles might rent you some gear. (They've got a
website but I forget where it is.)

Rich Wells <wells@ralvm.rtp.com> wrote:
> Off the top of my head I come up with BC895XLT

Unless I missed something in the manual, the BC895 only logs the frequencies during search. It skips subsequent hits on a frequency it has already logged. During scan mode there is no logging / counting.

Computer-control routines are useful to log activity on trunk frequencies and talk groups, but I haven't come up with a decent way to get hit counts on conventional freqs. Given the x-talk from limited I.F. filtering, this probably would be of limited use on bands with 12.5 kHz intervals.

Yes, I have noticed this as well. However, if your newsreader has a killfile, and you use it (believe me, it'll get pretty big) you can actually find something useful here and avoid the Scarlet Mackerel and his band of Fairy Nice Fellows.

And I hear the sniveling from the peanut gallery - "oh, but what about Bill Cheeeeeeeek??" Guess what. I eliminated Mackey and his aliases and <POOF!> no more problem. If you fell you have to filter Bill too, then so be it. I found that measure unnecessary.

I don't use filters Pat, I just cruise the subject lines. I can pretty much handle anything that shows up on my computer screen. I don't agree with many of the opinions posted, so quite often, I post responses reflecting my opinion. Such is the nature of discourse.

I saw you mention me in your post: I'm a member of your "TRASH" list. (Have we ever conversed before Pat?)

You might think I'm hosing you because you called me "TRASH".

But I'm not.

The name calling doesn't really bother me.

I'm taking issue with you about something else.

Filters are wonderful tools that allow users to manipulate the way the USENET appears on that user's computer screen. It gives the end user what he or she wants without seemingly even coming close to any censorship issues regarding the way others post. For those who wish to alter the way the USENET appears to them, I've recommended filters. Upon closer examination, filtering doesn't appear to be a totally benign technology Pat. I've observed two rather nasty applications of filters already:

#1 Your "Trash" list is probably censoring news readers of people who have no idea what some of those list members post. They're just taking it on your say so: "Are ya new here? Great, listen, this is "TRASH", don't bother looking at those, trust me."

And....

#2 Taking pot shots and then using filtering to duck the responses. Kinda like a kid who throws a rock and runs.

Now you're neck deep in filter evil #1. And you're going to have to respond to this post in order not to rack up credit for filter evil #2.

That's what it's about Pat. I'm taking issue with the way you're using filters and lists.

Me? I don't have a filter list.

But I do have a sh*t list.

Care to dance Pat?

"Ericsson" and "Motorola" are two VERY different trunking systems.

I think Ericsson's system is a little more organized, but I also hate it because it was created to not only decrease traffic, but to stop scanners from tracking the entire conversation easily.

Ericsson systems have four beeps at the end of every transmission, "wasting" the scanner's time and not allowing it to scan on the other channels where someone might be replying. There are also several and random channel switches which are usually 1-4 seconds in length, and they have a grinding, buzz-like sound A channel switch is one or several sets of this: usually a low sound for a quick second, a high sound, and then back to a low sound. This repeats on all channels needed to be switched. (The channel-switching is controlled by one or more repeaters -- each repeater usually corresponds to one channel, or frequency, such as 851.4625, which would be one repeater or channel.)

The transceivers used in an Ericsson system don't pick up the beeps and buzzes, but are always tuned into the "handshake" channel (which isn't be heard, either), a channel with a constant buzz, which tells the radios where to go on the system.

Hope this helps.

And something I should've added: the Trunk Tracker isn't designed to handle this type of system.

There may be a Trunk Tracker coming out sometime, which will be able to handle the Ericsson system.

i bid on a scanner at ebay a couple of weeks ago a realistic pro 39 it was labeled as new looking condition and perfect operating condition. I put in my bid amount and won the bid. the amount is not that important. so when i received it(at least i got it) this thing was a peice of shit. the charge and powerjack were both gone and a big hole was cut in where these jacks used to be. so i decided to open it up, what a soldering nightmare this this was so hacked up it wasnt even funny. he melted the plastic all over inside. so first off i contacted ebay. as the the seller was not a registered user i could not leave a very negative remark about his sale. I have called him and emailed him but he wont answer. i would like everyone who reads this ad to email him and tell him what he did it wrong. his user name at ebay is cumonow and his email address is: reallynow@thedoghousemail.com. i think ebay is a great site to buy and sell radio equipment but people like this ruin it for everybody cause this can happen to you it happened to me. thanks al

>If a trunk tracker is able to track Motorolla, why can't it trunk Ericson?

In one sense, it's for the same reasons that it isn't able to process video. It simply wasn't designed to!
Yes, you're right, the EDACS and Motorola systems operate differently, and the PRO-90 is designed to "follow" stations on the Motorola system only.
You're also correct that you can listen to transmissions on EDACS trunks, but the PRO-90 won't automatically "track" them.

I may miss a deal or two in my life, but I would NEVER do business with
an individual with an email address like that.
I mean, if he's hiding from email, which is harmless, why would he be
honest with anything else.
And for those of you about to spout something about my email, when I
deal with an individual, all the info he asks for is given, and able to
be verified.

Whoever antagonized the great Bill Cheeks, please stop. All motion will cease if he carries through on his threat to actually go away and take his toys with him. Somebody call PopComm quick cuz I'm scared. He owns these newsgroups and he's stating it in no uncertain terms, please heed his words or you will certainly suffer the loss of his life-sustaining information. Or maybe even be crucified by his followers. Bwhahahahah! C'mon, his contributions serve only those who want to eavesdrop on cellular communications and the occasional person who wants a brighter backlight or some such. Who cares? Maybe 0.00000000... percent of the population. And it's a segment of the population society would probably be better off without, often proven by the rec.radio.* groups in general.

And he has shed light on all the people who do things and then put themselves out in the public. I'm sure they experience the same thing since... wait, no, this is an isolated incident. It certainly wouldn't be the great way he handles it. I especially love the people who think Cheeks methods are the "right" way to handle things. As though putting gasoline on a fire makes it go out. Hey, maybe Mackey is to Cheeks like that Spielberg fan who wanted to... oh never mind, that's just gross. BWAHAHAHAHAH!

But I'm sure my post is an obvious attempt to control someone...

Love,

Brad N8QQ

2508. I finally did it...

Newsgroup: rec.radio.scanner
Date: 1998-07-17 00:00:00 UTC
From: psmalley@mail.hac.com
Message-ID: <6ookfs$8ur@hacgate2.hac.com>
Source record: 152038

Yup. I finally did it, kids. I finally got so sick and tired of the useless nonsense in here that I nuked it all. The killfile will still need tweaking, but messages with subjects like "Bill Cheek blows gophers" or "John Mackey is still a loon", etc. are to be seen by me no more.

See, I came back from some time off (6 days, that was it) and fired up the old newsreader, and even with the Looney Boys filtered out I still saw SO MUCH crap that it all started to blend together. I couldn't tell what was what in here anymore! That was when I said "enough is enough!"

We can say what we want to about Loon boy and his cohorts but until we all take matters into our own hands, as I have done, and stop gawking at and responding to their virtual train wreck in here, they've won. The time has come for us to turn our collective backs on the buttheads and bozos of this place and get back to the topic at hand. Don't you agree?

And to those of you who claim to have killfiled me as well (of course if you HAD you wouldn't be reading this) then that is your choice, and you can continue to do so. As a matter of fact, if you feel that my 10+ years in the scanning hobby are of no use to you, then the feeling is mutual. But you just never know when I might get a wild hair or two and post something that is just what you wanted to know. Take it or leave it, the choice is yours.

-Phil

P.S. if anyone needs a newsreader with filtering capability, I've got a free one that works great. Just send me a line and I'll pass it on to you.

Sony makes several models of micro and regular cassette recorders that they market under the heading of "Pressman". I picked up a micro cassette with 2 speeds (maximum of 90 minutes at the slow speeds) voice actuation, 2 rechargeable batteries, battery charger and ac adapter for 60 bucks. It works great. I picked this one up at Fred Meyers which is a chain around the Western US. Depending where you live you may check out some of the mail order places or such. Good luck.

>a recorder, so I'll re-enact it as close as I can remember.
>

I've been monitoring police action on the scanner for years and have had a number of incidents like this. Once I was sitting in my LeBaron convertible (with the top down) on Cave Creek road in Phoenix when a motorcycle cop was called to look for some robbery suspects. I realized that I had just seen them (the suspects) cross Cave Creek and behind a Jack-in-the-Box on the corner, and that the cop dispatch was talking to was on a motorcycle which had pulled up directly behind me. I held up my BC200XLT and pointed toward the Jack-in-the-Box. The officer smiled at me, waved, and then took off in that direction. I heard about two minutes later that he had the suspects in custody.

Another case I was listening to Fire dispatch on my Yaesu FT-8500 while driving on 43rd Avenue and that they had a call to an injury accident, but the caller didn't know the cross-streets of the incident , except that it was on 43rd Ave (the caller was too excited and a non-english speaker). I could see the accident about two blocks north of me. I switched frequencies, placed an autopatch to 911, and explained to the astonished dispatcher that I knew they were trying to locate an injury accident and then told her where it was located.

My all-time favorite police dispatch though, was a call to a North-Phoenix park where an angry Javelina was chasing joggers...

> Spain server to an AOL POP site on the east coast of the US.
>
> Again, not me as I am always west of the Mississippi!

Uh huh. Likely story. See, this proves nothing since AOL is a nation-wide service. You can be in Toledo Ohio, and access your account from the dial up server in New York NY and post your drivel from there, all for 10 cents a minute. Typical bullshit that proves nothing, which coming from you , is no big surprise. I am surprised however that a dimpleheaded dispstick like you has managed to hold down a job longer than 10 minutes at a time in order to pay for such technology. Oh well, guess that goes to show I don't know everything - yet.

I was Wondering If their Is A easy modification or device to buy to unscramle , scrambled cordless phones. I'm not overly knowledgeable of electonics so looking for something simple or that anyone with basic comon sense could handle. Also any other modifications that could be used on my scanners for other purposes are appreciated.
List of scanners I own:
Pro-32
Pro-2030
Pro-2006
BC 220XLT
Thanks For Your Help!

Does anyone have frequencies for security, or anything else of interest other then Nascar and Arca for Pocono Raceway?
Will be going to july race, noticed at june race wide range of cellular in 900 mhz going up into 940's (with BC) if I remember corectly also picked up celular around 50mhz on New Radio shack scanner.
" Cant find sheet I had actual frq listed on so apologize in advance if any of above is wrong.

Thanks for your help in staying intune with what is going on.

Brad, I'm losing respect for ya real quick like. I respected you for the way you handled your side of the argument during our last go 'round. You're articulate and you made me think. That's pretty commendable in my book; no matter how much I disagree with you (and disagree I do.). *That's* why I apologized for one of my comments that I felt went too far. I do that with people I respect; disagreements aside.

But what are you doing with this post Brad? What exactly are you trying to accomplish with this?

Good to hear it! I'll bet Radio Shack took Uniden's technology. That's probably the only reason it does work. <g> I had this same problem myself: I wanted to lock out a bank with a frequency I wanted to listen to, but I had to read the manual to figure out I had to press "enter" twice after entering a duplicate frequency.

Happy monitoring!

> and needs some support. Typical thug behavior.

OK. Here's why George is wrong:

1) I've only posted two or three times to the group because I only read it occasionally.

2) Mackey's ALWAYS getting his butt kicked and coming back for more, therefore if that were the reason for my posting, this would be at least number 3000, not number 3.

3) I am a thug. I break legs for Guido, when I'm not busy making concrete shoes. Imbecile.

Hello everybody !!!

Anybody out there who knows the company AGK, or was it AKG, and are dealing
with wireless microphones ??
I know they have delivered wireless microphone systems in the frequency area
841 - 886 MHz in e.g. Spain , but don't know their real name.
Anybody out there who know that company, and could give me their actual
name, address, phone, fax number and/ or home page on WEB ??

Thank's a lot.....,,, and good night to all of you.....

Did anybody ever come up with proof of that story that John Mackey murdered and dismembered several people in Iowa and then moved to Oregon and assumed a new identity to hide from the law?

I think I saw it on America's Dumbest Criminals. They showed a picture of him, but said something about him being able to disguise himself as the person next to him.

Anyway, I only bring it up because, well, I thought it would serve to defend Mackey's honor. Then I realized he has no honor, so there's nothing to defend.

Oh, well.

Actually the signal from the sides is better than many single-element scanner antennas. Now the back is kinda dead, but that's easy to work around. You can't just go with instincts and do without a rotor, but a few days of detailed notes will give you enough info to use it intelligently.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested.

Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks,

not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated June 20, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

JULY 1998

Jul 11 (Sat), Oak Creek, WI - American Legion post 434. South Milwaukee Amateur Radio Club. 6:00 AM Tickets $5.00. Directions: from Chicago, take I 94 -Right on HWY 100 (Ryan Road) to Shepard Ave. Left on Shepard (north-less than a mile). Phone 414-762-3235 Talk-in Freq 146.52 (The size is about the same as Sugar Grove hamfest. - Mike Souhrada).

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. Take I-57 to Peotone Exit 327 (east). 146.94 MHz (-600) talk-in. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 8 (Sat), Quincy, IL Western Illinois Amateur Radio Club Quincy, Illinois. Ham Radio and Computer SWAPFEST 1998 8:00AM to 2:00PM. The Western Illinois 1998 Swapfest will be held at the Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy, with easy access from US Highway 24. Admission is $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market

space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. Card Checking for ARRL awards at 9AM, 10AM, and 11AM. For additional information contact N9JF, jfunk@adams.net.

Aug 30 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. The BC Emergency Radio Frequency Directory from ERC Publications
is my choice. The most current is Revision 7.
I've seen it on sale at both Radio Shacks in Metrotown Mall.

The ERC guide is aimed at public safety but also covers related
services.

Hope this helps.

I occasionally need accurate time signals when I am in the field with my scanner. Obviously the usual time references (e.g. WWV) are not scannable. Has anyone found any scannable frequencies that include time checks?

Thanks,

Ben F.

Your lame attempt at controlling everyone else was rejected by ALL. And must we point out *again* that you refused to accept ANY of Bill's terms?

Try controlling yourself. Unplug your computer and find a girlfriend to help you - or a good shrink.

Some assembly required.

2551. ICOM dealer gives up in disgust..(long).

Newsgroup: rec.radio.scanner
Date: 1998-07-17 00:00:00 UTC
From: John <mcdermon@usa.net>
Message-ID: <NOxr1.139$HJ3.9508@news.mci2000.com>
Source record: 152104

The following is cut and pasted from the pcr-1000@qth.net mail list.
Apparently SWS Security has called it quits with Icom. I've never had
any direct dealings with Steve Uhrig, but from the sound of it, he's been
quite involved with selling Icom equipment for over a decade. Read it for
yourself if its a topic of interest...

---------------------------< cut and pasted here
>---------------------------------
Date: Wed, 15 Jul 1998 22:09:36 -0400
From: "Steve Uhrig" <Steve@swssec.com>
Subject: [PCR-1000] [Icom] No longer a dealer?

Once upon a midnight dreary, Mike Curtis pondered, weak and weary:

> Okay I'll bite... Why are you no longer an Icom dealer?

> Steve Uhrig wrote:
> > Steve Uhrig, SWS Security, Maryland (USA)
> > Mfrs of electronic surveillance equip
> > After 14 years we are NO LONGER AN ICOM DEALER, ask us why!

In response to now 41 messages asking the same question as a result
of seeing my email signature, I will give an explanation:

We had been with ICOM for well over a decade, longer I suspect than
anyone who works there now, and starting back when ICOM was called
Inoue Communications. The 2 meter mobile radios back then had
tubes in the finals.

For the last 5 years, but specifically in the last year,
ICOM has had an increasingly miserable attitude towards the
customer, and virtually no measurable ethics.

ICOM's corporate attitude is: The customer is there to be pillaged
and plundered, to provide a means to make ridiculous and impossible
high pressure sales quotas. As long as the customer has money
in his pocket he might spend on ICOM, you pay him mind. As soon as
his money is spent, you leave his carcass behind to rot in the sun
until he has more money. If the customer has the gall to ask for
post sale assistance, well that's just too bad and shame on him
for being foolish enough to buy our product in the first place.
Ignore him. Our efforts must be spent exclusively on pushing more
boxes out the door.

Don't deal with anything, don't admit to any problems, don't tell
the truth, don't keep promises. Just ignore those unwashed masses
now that they've spent their money, and sooner or later they'll go

away and leave us alone. After their incredibly short memories fade, we'll play all sorts of marketing and promotion games and gimmicks to shove more new equipment down their throats.

We don't make mistakes. We know better than you do. You will do as you are told and buy what we tell you to buy. If you have a problem it is due to your own ignorance, not any problem with our company or our products.

******

This was the attitude we dealt with. I sat in sales meetings in Bellevue and sat on ICOM employees' desks and heard this. The problems started and could have ended with one individual, but they grew to permeate the company. With few exceptions, the folks at

ICOM are decent people. However, the primary exception sets policy and prices and the rest of the company falls into line or they will find themselves without a job or relegated to meaningless tasks as punishment.

The dealer was expected to push product and keep his mouth shut.

ICOM considers customers and dealers both as necessary evils. Dealers were convenient scapegoats. Admittedly, few dealers (and ICOM only has a few) would do right by the customer and most went along with the ICOM mentality because they needed access to the products and were afraid of the repercussions should they stand up to ICOM.

I could not see taking a man's hard earned money, the fruits of his honest labor, for a radio and then seeing him ignored by ICOM if he had problems. This was a serious issue with me and my employees. I own the company and it was me who insisted we hang on. Without exception, every one of my employees as well as my wife have been anxious to see us leave ICOM. That's because we have a conscious.

Anyone who bought from us and had problems got satisfaction from us, almost always at our expense. I *literally* spent tens of thousands of dollars straightening out large fleets where I had installed ICOM products, and those products turned out to have defects or other problems which ICOM ignored.

Because we have/had a large Internet presence on ICOM, a lot of support issues were brought to us by persons all over who bought from our competitors, usually because our competitor was cheaper. But because I believed in the product and have respect for a man who spent good money, I personally supported hundreds of radios we never sold, to the tune of tens of thousands of dollars. I faxed schematics, sent little parts for free, fought battles with ICOM, wrote long posts explaining how to fix problems with the different radios, etc. I did this as a

volunteer merely to be of service to the community of people who spent their own personal money on an ICOM product. Possibly some of you may have noticed a few of my posts on this list or other lists, or one of the newsgroup.

I normally would not mention it, but probably few are aware that my company contributed money several times to the support of this list, far more than we ever made in profits from business we did on this list. I asked ICOM once if they would contribute something to this list also, and they (figuratively) laughed in my face.

Bottom line is my company (me, mostly) provided tons of free and competent tech support to persons who never bought anything from us. This was in spite of the fact that the dealers who did make a profit off the original sale were, for the most part, incapable and unwilling to provide tech support. One dealer, in fact, repeatedly underbid us for hundred thousand dollar orders to the government, then gave that same customer OUR 800# to call for tech support!

I am one of the little guys who knows what it is like to sacrifice and spend this year's vacation money for a new radio.

A few weeks ago I gave Rick Crider some advice on this list on how to deal with problems he was having with ICOM, and who to talk to

at ICOM to maybe resolve his concerns.

Well, ICOM monitors this list (but you sure don't see them jumping in to help anyone, do you?), and my message was read by Mr. Chris Lougee (amateur and land mobile division manager, and 2nd top guy in charge at ICOM), who took exception with my effort to help an *ICOM customer*. He called me all bent out of shape one day about my email to Rick Crider, while I literally was on my way out the door to the hospital with a medical emergency. I thought he was my doctor or someone calling with instructions, so I told him I couldn't speak then but to call me back after the 4th of July weekend.

Then he emails me a few days later and tells me he has terminated our dealership.

I would have pulled the plug myself within a few weeks anyhow, after I wrapped up the last two large deals I had going.

The above is why we no longer are ICOM dealers.

It is only the tip of the iceberg. There are many other issues, like ICOM blatantly and deliberately lying about specifications of some of their radios, and leaving the dealer in the middle. One example of this is their claimed Mil 810 spec for some of their portables. Back this spring I bid and won a large two way order for a government agency, but before they could award the contract I had to provide a formal certification of mil spec testing and

acceptance. After weeks and weeks of begging ICOM for the copy of the certification from the testing agency, they were unable to provide it, and merely faxed me a letter written by someone in Japan stating *the company* certified the radios met all Mil Specs. So we lost the order to another manufacturer due to ICOM fraudulently advertising to this day that their radios passed Mil Spec. Hey, we are manufacturers, I am familiar with the Mil Spec and the testing, and no way on the planet would ICOM's portables have a chance of passing the full spectrum of MIL 810 C/D/E testing.

Good thing I found out before delivering the radios to the government, or it would have been my problem, not ICOM's. Could have cost me a hundred grand and cost us our eligibility to bid government projects, which is our lifeline.

ICOM also does not pay commissions for GSA sales, and they to this day they owe us tens of thousands of dollars in unpaid commissions.

ICOM competes with their own dealers in sales to end users, and in several cases has bid large slates of equipment to the government for prices lower than a dealer pays ICOM for the equipment. They claimed they made a "mistake". But they continue to make these mistakes dozens of times a year.

ICOM would make all sorts of commitments for special prices on quantity purchases. I would rely on these and bid huge government orders and win them. Then when I went to get the equipment from ICOM *and they knew I had signed a contract and could not back out*, they (Mr. Lougee) would raise the prices. The special deal I had cut with him he would deny and challenge me to show it to him in writing which was impossible since the deal was cut over the phone. See, he knew I had signed my name to a contract with the government and had to deliver. My company lost tens of thousands of

dollars over these types of shenanigans too.

If you don't have it in writing, it doesn't exist. Remember that, if you ever call them with a problem. They will pay all sorts of lip service to your problem just to get rid of you, and then will have forgotten you before they hang up the phone. If they did it to us with the money we spent, they will do it to you. Get it in writing. If they won't put it in writing, that should tell you something.

And I won't even mention the design problems with the PCR1000 receiver of which ICOM is well aware but of course blames completely on the ignorance of the user. That receiver is a disaster and will be costly to many customers.

As I have mentioned before, the bulk of the problems start (and could end) with Chris Lougee who can be reached at 800--872-4266 or 800-426-7983; just ask to be transferred to him at extension 6073.

You will get his very pleasant secretary Jemima whose job it is to make sure the unwashed masses like you and me do not get through to him; if you insist you have a matter of some importance that must be discussed with him immediately you might get through. In the unlikely event you do get through, remember all the lip service means nothing if not put in writing.

If anyone would by some miracle get through by phone, email or snail mail, and any of my posts here were ever of assistance to you, please mention such to him. Let him know we treated customers honestly, and our parting ways ultimately is his loss.

He also can be reached by email as CLougee@compuserve.com and by post at:

Chris Lougee
ICOM America
2380 - 116th Ave NE
Bellevue WA 98004

There is a new amateur division manager named Dave Wallace who seems like a decent sort. He is brand new and so probably is naive' to all ICOM's problems, but as he works for Chris his ability to fix things will be limited/squelched. Dave's email is KK7KJ@compuserve.com. Certainly wouldn't hurrt to cc: him on any mail.

The top man at ICOM is Bob Brunkow, extension 6099, same post address. I doubt he knows what is going on; he seems to spend his time flying between Bellevue and Japan and wondering why the company has no measurable market share in land mobile, and declining market share in all other divisions. Wouldn't hurt if he would hear some of the goings on from the trenches. I honestly doubt he knows.

I could go on and on, but you get the idea.

Good people at ICOM are Gary Fiber and Orien Jeans in tech support, and Sandy Williams on the dealer order desk. There are a few others, but I dealt with these three the most. Gary and Orien are exceptionally knowledgeable in the product line and if we were closer geographically I would hire them away in a millisecond. But they have no authority to change or set policy, and I rather doubt suggestions to them about technical matters are heard by anyone outside their cubicle.

Fortunately for my company, we did relatively little commo business and sales of ICOM represented less than 10% of our annual revenues. We will not miss ICOM. ICOM loses dealers every day and will, however, miss the six figures worth of business we did

with them annually. And our customers will miss having a competent dealer with integrity who was not afraid of ICOM and would stand

for the customer and against ICOM if ICOM was not doing right by them.

Remember, ICOM and Mr. Lougee reads this list, so replies and comments on what I have posted here should be posted to the list. Spread the word on newsgroups too about your satisfaction or lack of same with ICOM issues, as newsgroup posts are archived and easily searched through dejanews or similar.

BTW, we will continue to honor any extended warranties we offered, and will continue to maintain the fleets we have under contract. Our break with ICOM does not affect our service capability. And if we made any other commitments to anyone regarding ICOM equipment, please remind me of them and I will see that they are honored.

Too bad ICOM and their customers have to suffer because of the incompetence and intransigence of basically one man, but that is how empires crumble.

Remember there are companies other than ICOM who produce basically the same equipment and who still believe the customer deserves some consideration. Buy from whomever you choose, but here is one former dealer who has bought millions of dollars worth of commo gear, and will not spend another penny with ICOM.

Thanks to all for the encouragement and compliments on any small amount of technical assistance I have provided on this or any lists. I have made many friends through this list, and I appreciate all the mails of support, and would especially appreciate anyone and everyone letting ICOM know what if anything you feel about the matters mentioned above.

Of course there are two sides to every story and you have heard one of them. ICOM will have their own version. Your and other's experiences with ICOM will tell you which version to believe. Especially, ask any other ICOM dealer you can get to open up.

Watch soon for a listing on our website used equipment page for a list of ICOM mainframes, parts and accessories we will be selling. Almost all commercial items; little for amateur. URL is

http://www.swssec.com/used.html, and you can sign up at the bottom of the page for automatic email notification when the page changes.

I also will be posting some pages soon regarding our experiences with ICOM giving specific details of some things customers or potential customers ought to know.

Regards to all ..... Steve WA3SWS

Using a directional antenna, you would probably not be concerned with
the weaker signals from other directions. If you were, an omni would
be the antenna of choice.

> Next time, Mike, please read and understand before typing.

You should follow your own advice.

Last I checked, the park was using 164.475. I don't know about the deer,
though (are there voice comms associated with that?).

It sure ain't a Diesel locomotive. Of COURSE it's still a TV antenna.
It will still pick up TV signals, although not quite as well as the
horizonal version.

2560. F.S. Trunktracker

>I occasionally need accurate time signals when I am in the field with my
>scanner. Obviously the usual time references (e.g. WWV) are not scannable.
>Has anyone found any scannable frequencies that include time checks?

You *might* get lucky and find a 2x15 MHz image from WWV, but I doubt
it. Best bet if you're bound and determined to use the scanner is to
get the converter mentioned in here a while back. It's not too good,
and it doesn't work with a PRO-2006, but it should let you hear all
the WWV frequencies, as well as the entire SW spectrum. I think it
plops it down around 40 to 70 MHz.

That's real nice of you to "hit me in the wallet"
based on Mackey's lying statement above and based
on his forgeries and bogus posts in my name. You
must be one righteous, just, and fair man.....

<Gack>

To make matters clear, let me add that your
money's no good. I don't want it from people
like you who hold Kangaroo Court and play
silly games of intimidation like that. Take
your money and shove it up your grump stump.

And....

How's about if I just hit you in the head
by stopping my contributions to the hobby?

You take over. You develop new hacks, tweaks,
peaks, and mods....and publish them to the
world. And then put yourself out in public
to support your work, and at the same time,
become the target of every sicko and wacko
around for miles. Let's see how you do.

Do it. Or are you afraid to stick it out
and belly up to the bar for a measurement?
I think you're yellow. You TALK a big story,
little man. Let's see you ACT big.

Anyway, go whistle "Dixie" for your mods, hacks,
tweaks, and peaks. Or see if you can do
'em yourself.

Tell ya what, fella....people like you make
me sick.

And that is the mildest way I can put it......

Message-ID: <35AEFD43.7E43@ix.netcom.com>
Source record: 152118

Hi again,

Years ago, O.K., a couple decades ago :/,
I had a Bearcat 250 base scanner.

One great feature I loved, was that it counted channel
activations.

Once you programmed a frequency onto a channel, it would
count it up to 99 times. This was great for deciding weather
or not to keep a channel programmed, or if it was active at
all. Scan all day, drop the 00 activations.

Are there any modern high end scanners now that offer this
type of feature? Any info would be appreciated. Thanks
again.

Source record: 151873
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I noticed an ad in the "Short Wave Magazine" that is printed
in the UK. The ad was for Carrier Wave UK and it featured three
handheld scanners. I know that GRE has made scanners for years for
RadioShack, RCA, Comtel and now they are working with Optoelectronics,
but I never have seen where they have done anything with their own
name. The ad states: "GRE has been manufacturing scanning receivers
for the past 25 years and have now just launched their own brand
models into the UK market." The PSR239 (200 ch.), PSR250 (20 ch.) and
the PSR244 (50 ch.) scanners have the UK bandplans and the latter two
of the scanners only go up to 512 MHz. Hopefully we will see more
models with greater capabilities.

Wrong, wrong, wrong!! Typical child giving out erroneous (false) information.
"Ilegal" is spelled "Illegal" (two L's).

And now, for the GOOD STUFF:

The ECPA (Electronic Communications Privacy Act) of 1986 and 1994 made it
ILLEGAL to listen to both cordless and cellular phones.

Don't believe me? Here's some proof:
<BEGIN PROOF>
-http://www.law.emory.edu/6circuit/june95/95a0180p.06.html
"Title III as amended in 1986 forbids the non-consensual interception of wire,
oral and electronic communications. 18 U.S.C. ï¿½2511(1)(a). Furthermore, the
statute also forbids the intentional disclosure or use of the contents of any
wire, oral or electronic communication if one has knowledge that the
information was obtained through illegal interception. 18 U.S.C. ï¿½ 2511(1)(c)
& (d). Violators are subject to criminal prosecutions as well as civil damages
to the party whose communications were intercepted. 18 U.S.C. ï¿½ ï¿½ 2511(4) &
2520. Unless the plaintiffs' conversations qualify as wire, oral or electronic
communications, however, Title III affords them no protection. "

- http://www.popcomm.com/hr2369newsflash.htm:
'Right now it's pretty much okay to listen to whatever you like (EXCEPT
cellular, cordless phones and PCS, of course) as long as you don't repeat what
you hear, or use it for personal gain. '

-http://www.ewss.com/fact2.htm
"Federal law prohibits the intentional eavesdropping of cordless and cellular
telephone conversations. (18 USC 2510) Another federal law, the "Counterfeit
Access Device Law," has recently been amended to make it illegal to use a radio
scanner "knowingly and with the intent to defraud" to eavesdrop on wire or
electronic communication. (18 USC 1029) Penalties for the intentional
interception of cordless and cellular telephone range from fines to
imprisonment depending on the circumstances. (18 USC 2511, 2701) "

-http://www.ewss.com/fact1.htm
'12. Be careful what you say on cordless and cellular telephones. When you talk
on a "wireless" phone, you are actually transmitting a radio signal. *****Even
though it is illegal*****, your conversations can be picked up on radio
scanners. '
<END PROOF>

ALSO, *YOU* can be held responsible for OTHERS' listening illegally to these
transmissions, since you provided false (erroneous) information.

The ONLY reason these frequencies are not blocked is because some low power and small/local, and sometimes [inter]national governmental enteties use these frequencies. Otherwise, they WOULD be locked out. They are also very low power.

JPS wrote:

> It is not ilegal to listen to cordless phones, it is only ilegal to listen
> to cellular phones. If it were ilegal they would lock out these frequencys
> also.
>
> The new law only makes it ilegal for police to tape these conversations and

Source record: 151876
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I must STRONGLY DISAGREE with this statement (below).

Why don't they lock out Remote Broadcast Links? Why don't they lock out pager transmissions? Why don't they lock out cordless phone frequencies? Why don't they lock out encrypted MDT transmissions? Why don't they lock out encrypted voice/data transmissions?

ALL of these are ILLEGAL to listen to, but they are NOT blocked! So again, you are wrong.

JPS wrote:

> If it were ilegal they would lock out these frequencys also.

And, as a final comment (and warning):

You yourself, JPS, can be held responsible if ANYONE reading your false information does what you say is true. If they acted upon your information and intentionally listened to or programmed cordless phone frequencies on their scanner, you can be held just as guilty as the others are, along with a huge fine and jail sentence.

Most people say, "how can they enforce the law of making cordless phone-listening illegal?" -- well, it is simple. If you recorded or used a cordless phone transmission as proof against something or someone and presented it to police, the person you were trying to prove guilty gets off, but you would be fined.

JPS wrote:

Date: 1998-07-18 00:00:00 UTC
From: Ken Dewalt <satvsys@worldnet.att.net>
Message-ID: <6or9ep$atm@bgtnsc03.worldnet.att.net>
Source record: 151879

Just finished installing the Scanmaster antenna to replace my Radio Shack discone.
Before I took it down I wrote down the signal strength on 10 channels of my Bearcat 895
After installation I went from 1 vertical bar of signal to as many as 3 or 4. Some services
had scratchy audio and no vertical bar, and these became clear and showed 2 bars of
strength. Most channels were in the 155 Mhz range, but 3 were in the 460 Mhz and they
all showed noticiable gain. Overall I am pleased with this $39.95 antenna and would
recommend it.

FHP and the rest of the State agencies are supposed to be going on some
digital Motorola
system in phases (This is subject to legislative approval on a phase by
phase basis). In fact, I am
not sure if it is going to continue or be scrapped in "midstream". In any
case, FDOT and FHP in southeast
Florida are on it already. Like I said, they might waste our tax money by
ditching it and trying something else.
By the way, do not even try to track it. It is digital and has more than the
30 frequencies which can be handled by one
bank of the trunktracker.

Richard

I am thinking of getting a scaner and have a few questions in mind. First, is it really worth getting a scaner, I played with my dads radio in he's truck and found it boring. Second, which one should I get, I leave in a big city. Third, there are scaners for $100 and for $300, will I be okay with a cheap one or should I go for the best? Thanks in advance!!!

No man, where are reading that I'm complaining. At this point, I'm just one
loudmouth yelling about another. (meaning cheeks) I'm just saying that if
wants to take his toys and go home, he is free to. There aren't many people
that care.

>Well, thanks for your post. At least now we know
>what you're made of so we can step around you when
>walking through the cow pasture.

Okay. But you have to admit, you also post with that kind of attitude on a
daily basis, it's just to different people. It's amazing at how different
the attitude becomes when you pick on somebody's buddy rather than the
person they like to pick on. It's pretty much that simple, isn't it?

>Right here, pal. Right in your face.

I'd say that pretty much sums it up the attitude I'm talking about. It's the source of all the problems that you bitch about. And it's why Mackey plays you like a tuba.

>Soooooo THAT makes this a commercial newsgroup, then.

Everything about the Internet is potentially commercial. You know that. It's no different than someone saying something like, "I won't shop at Radio Shack because I think they make crap" or whatever. I've seen posts from your direction that have led people to your web site. That's how I found it. Not that I care, but that's also potentially commercial.

>What if I bring out superfluous
>and irrelevant "facts" about you or HIM? Like your
>child-porn business? Or HIS male escort service?

That's different, that's harassment and the last time I checked it's _very_ illegal, especially when messing with your business. If what you say is true, he has clearly violated the law on a number of occassions. I would never fuck with you in that manner, and if anyone ever seriously fucked with me or my business in that manner, they'd lose their ass legally. Very calmly and quietly, it wouldn't even be an issue. There'd be no childish feud lasting for years. Certainly if you have a business, then you have lawyer.

>What IS your agenda, Jerkov?

That you whine about a lot of stuff that normal people seem to handle without a problem, namely wastes of human flesh like Mackey. Why do I care? I don't really. Just killing time on a weekend. I'll admit that I'm perplexed that you can seem smart in one area yet seem so naive in another. And it's a shame to see such a cool business possibility be marred by something like this situation.

Can't remember where I saw this, and haven't tried it yet, but here goes:

- you need your scanner, a CB transceiver, and a radio capable of receiving CB transmissions.

1) bring up the "scrambled" conversation on your scanner.

2) with your CB, broadcast it on one of the CB channels <NOT an emeregency channel!!.

3) listen to the conversation on your other radio that receives CB transmissions. The conversation should be "unscrambled".

Agreed! That is a great feature! My RS 2045 has it.

Two feature that would benefit the channel count are:

1) Count shouldn't stop at 99 (ala RS 2045).
2) Count should have at least 7 memories that would automatically switch memories every 24 hours (ok, so add a clock chip?). So, if you left your scanner on for a week, each memory would have that day's channel/time/count numbers. That way you'd be able to map out what day and time of the week those channels are "dead or alive". I'm guessing that some "minimal count" channels do come to life sometimes. All you'd have to do to avoid day/count memory overlap is wait until 00:00 some morning to turn it on.

Where do I get this stuff!

Take it easy,

Andy

I don't remember the exact URL for this, but look for a program called
'mdtstuff'; you have to build an interface and tap the discriminator
output but as long as you are using the 4800 baud standard (some
jurisdictions are, I understand, using 9600 baud, and mdt won't handle
that- yet) you'll get readable text most times. I have seen it demoed
on 2 occasions and was quite impressed.

I never bid on anything unless the person is registered so I can look at their feedback.
There has been a rash of people like this who offer an item and then just made a one time account using email accounts from places like hotmail etc.
They put up a piece of crap for bid and then someone like you bids on it and you can't leave any feedback about them.

What good would it do? The idiots wouldn't
know how to use PGP to verify, and the
intelligent ones already know how to tell
the difference.

So PGP just makes for an extra, pointless
effort on my part. Not a bad idea, except
that "proof" is in the eye of the beholder.

Our illustrious "Dan Danz" <ddan@az.stratus.com>,
the originator of this thread wouldn't know
PGP from PVC. Read his judgment again and
see how he came to his conclusion......

Whick leads me to suspect it's just another
Mackey Forgery........ After all, the weekend
is approaching, and he "comes out" a lot on
weekends.

Oh well........

Nothing accomplishes anything in these groups dude. Logic and reason do not apply here, you know that. Seriously, I hate to use a cliche but you're damned if you do and damned if you don't. So I'm just posting from the gut like everyone else...

So did you read that post from Cheeks? Gonna take his mods and hacks away and ruin the hobby. Boo-freakin-hoo, fine by me. And THAT is the most clear attempt at control I've personally seen on this newsgroup from any angle (not that I really give a shit about the control argument, but that seems to be the important factor to the fan club). And that's generally my reaction to that sort of thing. Those kinds of responses are why people give him all the shit he whines about getting. Business-wise he could really use a PR person (and a slick web site). I've also toyed with the idea that maybe he just does this for publicity, under the "any attention is good attention" theory. I mean look at how much I'm talking about him in third person right now ;) Would be a riot if Mackey were on his payroll! (kidding, of course) That can work well in a competitive market, but not necessarily wise when you're the only one doing what you're doing. So I tend to doubt that it's calculated business strategy. I dunno. I also believe that by referring to his scanner related business and its public relations, that I've put this post on topic!

But how do you normally respond to that kind of thing? I'm honestly bummed if that makes you think less of me, but I can only respond to it with apathy and sarcasm. A dude was trying to make the point that if you don't like his attitude, then don't buy anything from him. That kind of statement is _very_ legal, the responses from the Cheeks fan club were comical at best. And I was really just clamoring in harmony, I would never buy anything from him either (and I know he could care less, whatever). I tried logical arguments, but only you and k4cc gave me the time of day. So I'm really just making noise for the most part, I guess.

The BUG CATCHER is a very large and (to some eyes) ugly vertical
whip antenna for mobile applications - it is intended to be
mounted on an automobile.

Supposedly this brand/design is a bit more efficient than
some other mobile antennas, because it uses a larger-diameter
loading coil. The advertisements that I've seen specify it
for use on amateur (ham) h.f. bands.

Maybe there are advertisements for BugCatchers in the
recent ham radio publications.

I built a voice activated relay from a kit
RS used to sell. Connected it between the
BC250 and a non-VOX recorder. I'm glad it
was working the morning of the PSA mid-air
collision over San Diego and I have about
90 minutes of tapes, from the first report
from the crew of engine 14 which witnessed
the impact while they were on some outside
activity, through the 3rd alarm dispatch.

First, it is illegal to monitor cordless phones. Second, it is illegal to listen to any type of scrambled emission. Third, it is illegal to decrypt a scrambled emission without proper authority.

However, there is a program called "Invert". You plug the scanner into the sound card, and run Invert, find the right inversion frequency, and the inverted (unscrambled) signal now comes out of the speakers.

It is not ilegal to listen to cordless phones, it is only ilegal to listen to cellular phones. If it were ilegal they would lock out these frequencys also.

The new law only makes it ilegal for police to tape these conversations and use them in court without a wire tap order.

At best, you're being silly. More than likely,
you have an agenda. At worst, you are a personification
or even an aka of ol' whats-his-face.

> So did you read that post from Cheeks?

Did you? Did you read it with any semblance of
an open mind?

> Gonna take his mods and hacks away and ruin the hobby.

Is English NOT your native language, perhaps?
Or....are you just stupid and unable understand
what you read? Or...can't you read, period?

> And THAT is the most clear attempt at control I've
> personally seen on this newsgroup from any angle

What about the opening post on this thread by
the idiot, "Dan Danz" <ddan@az.stratus.com>?
You're saying THAT wasn't an attempt at control?
And if you agree that it was a control attempt,
then see if you can surmise WHAT elicited it.

Nothing legitimate, that's for sure.

> (not that I really give a shit about the control argument,

Then why bring it up? And why focus on a
response rather than the original post?
You're right.....you are devoid of logic
and reason. That's for sure. You sound
more and more like 'ol whats-his-face....
you know....CIRCULAR.

> Those kinds of responses are why people
> give him all the shit he whines about getting.

Ha ha ha ha ha.....responses? WHY the original
inflammatory attacks, Jerkov? Why you, ferinstance?
What did I ever do to YOU? Spit it out, Jerkov.

I'll bet you've profited in one form or another
of my posts here over the years. And it's an even
surer bet that nothing I ever did caused you
any harm.

> Business-wise he could really use a PR person

I'm not here to do business, Jerkov. Right now,
I am here to confront YOU and your agenda.

Right here, pal. Right in your face.

> (and a slick web site).

Does your web site beat mine? Where is it, so
I can go take lessons? Why do you visit mine
if it's so bad? Are you a masochist like ol'
whats-his-face?

> I've also toyed with the idea that maybe he
> just does this for publicity,

Hmmmmm. Guess it works, huh? You are a living
example and proof of how it works. Here I dangle
a piece of shit on a hook in front of your nose,
and you just can't resist biting into it.

<snicker>

> A dude was trying to make the point that if you don't like his
> attitude, then don't buy anything from him.

Soooooo THAT makes this a commercial newsgroup, then.

But I said nothing about buying and selling. He just
leaped on that turd of his own creation. He had
no call to do that. What if I bring out superfluous
and irrelevant "facts" about you or HIM? Like your
child-porn business? Or HIS male escort service?

Ohhhhhh lordy, I can hear the cacophony of howls
and snivels now..... "Mommy, Mommy, he's picking
on me again.....". Easy, Jerkov, don't shoot at
me and I won't shoot at you.

> I would never buy anything from him either

The biggest reason why NOT is that I wouldn't
SELL you anything. YOU are 'persona non grata'
just like the imbecile "Dan Danz" <ddan@az.stratus.com>
who feels compelled to change the flavor of
this newsgroup from hobby to commercial...along

with his own cute little agenda.

> (and I know he could care less, whatever).

I'm very glad of that, because I won't have to
waste time looking you up in my database to see
that great big PERSONA NON GRATA flag by your name.

> I tried logical arguments, but only you and k4cc
> gave me the time of day. So I'm really
> just making noise for the most part, I guess.

Noise? Now THAT qualifies as an understatement of
the year. You eat too many boiled eggs and beans
last night?

What IS your agenda, Jerkov?

Do an Alta vista search for Amtrak web site. There you will find all of their frequencies.

Does anyone have a .jpg or .gif image of the Pro-2026 scanner that they could e-mail to me? I had 2 scanners stolen, and I would like to take a flyer to all the pawn shops in the area, in case they turn up there. I need a .jpg or .gif to show what the unit looks like. I have searched the net with no luck. Please help me by emailing me an image of this scanner if you have it. Thanks in advance.

If you know what it is, you know what you're willing to pay. I paid way too much when I saw it, so anything within reason is my goal.
The best offer I had was $500. It didn't work out. So I'm going on the bird in the hand concept.
It's sitting in a box, just waiting for a new home.

If you're curious, It covers 500 khz to 1300 Mhz. Not cell blocked, not modified it's just pre ban. It is controllable through an RS232 port with the software I'll include.

Please, no flames, just interested buyers
Good judgement comes from experience. And experience ? Well that comes from poor judgement.

The service manual for the BC200XLT
has a parts list and schematic which includes the
diode you mentioned but no specs on the diode.

Looking at the schematic, this diode doesn't appear
to be a Zener. Instead, it seems to be a low loss
diode in series with the output of the regulator.
It would prevent the NiCd from discharging
back through the regulator when the wall wart is not in use.

look at or "add my opionion" to

" oh no, you are the one who fakes posts waaaah waaaah whine whine
etc"

For that they are very usefull... unfortunately, I might lose some
good messages because of it, so I am very carefull with filters and
use a lot of booleans to make sure that a message is definately junk
before it is trashed... for instance, I will not trash mackey
messages, unless they also contain the word cheek in them, and some
other choice words which they like to use, this lets me enjoy their
usefull posts.

Shoot, I thought I'd filtered this garbage out entirely! (Nice comeback
though, Dave, I like it!). It got thru not because of John's blatant attempt
to worm around the filter, as I did not see his message, but because the
message subject did not contain "cheek" or "mack". SO.....

I think if I get rid of all posts that have "NG" in the subject line, that
oughta do it...

It would be nice if Ebay would support Credit card transactions on the behalf of the seller, and perhaps take a small percentage off each transaction. That way purchaces could be contested with Visa... if u get a crappy scanner from him, and u can't contact him cause he lied to you, then you just don't pay the credit card bill, and write an explanitory letter to visa.

Phil Smalley wrote in message <6ookfs$8ur@hacgate2.hac.com>...
:Yup. I finally did it, kids. I finally got so sick and tired of the useless
:nonsense in here that I nuked it all. The killfile will still need tweaking,
:but messages with subjects like "Bill Cheek blows gophers" or "John Mackey is
:still a loon", etc. are to be seen by me no more.
:
:See, I came back from some time off (6 days, that was it) and fired up the old
:newsreader, and even with the Looney Boys filtered out I still saw SO MUCH
:crap that it all started to blend together. I couldn't tell what was what
:in here anymore! That was when I said "enough is enough!"
:
:We can say what we want to about Loon boy and his cohorts but until we all
:take matters into our own hands, as I have done, and stop gawking at and
:responding to their virtual train wreck in here, they've won. The time has
:come for us to turn our collective backs on the buttheads and bozos of this
:place and get back to the topic at hand. Don't you agree?
:
:And to those of you who claim to have killfiled me as well (of course if you
:HAD you wouldn't be reading this) then that is your choice, and you can
:continue to do so. As a matter of fact, if you feel that my 10 years in the
:scanning hobby are of no use to you, then the feeling is mutual. But you just
:never know when I might get a wild hair or two and post something that is just
:what you wanted to know. Take it or leave it, the choice is yours.
:
:-Phil
:
:P.S. if anyone needs a newsreader with filtering capability, I've got a

free
:one that works great. Just send me a line and I'll pass it on to you.

Theoretically anything that goes out over radio waves can be monitored. Third-party-
type monitoring technology is keeping close pace with transceiver technology, so if it
can't
yet be monitored, it probably won't be too long. If there currently is software/firmware
out
there that can monitor TRS control channels AND direct scanners to follow the signals just
as
a transciever on that system does, then why can't similar software/firmware read MDT data
transmissions? The only problem I foresee would be an unknown encryption algorithm or key
or
whatever. And, of course, the prohibitive cost of necessary equipment to the casual
enthousiast.
I don't have any experience with software that monitors digital transmissions (unless
you want to count DCS codes, which aren't too far off), but I recently obtained a computer
controlled scanner and am starting to look for such programs. Anyone out there have
suggestions for an OS (I've already got Probe)?

I don't pretend to make any statements, you and your buddy OBFD made all kinds of statements and accusations and never proved one of them.
And you still make those accusations under the pretense of defending Bill just to get things going, like the constant changing of your headers to get pass filters and then lie by saying your designing the ultimate anti-spam software.
Wish there was and ultimate progam available and then it could be used on your pathetic garbage.

"Brad McConahay" <brad@DAMN-THE-SPAM.n8qq.com> writes:

>That's the same way you respond to people you don't care for around here.
>Is it not?

You're confusing "around here" with reality. Caring or not
caring for people has nothing to do with how I respond to
newsgroup posts. The way I respond to intelligent, well-
meaning posts is different than the way I respond to juvenile,
combative posts like yours, if that's what you mean.

>Nope, just the Cheeks fan club.

That's who you NOW claim to have been flaming. Now, here's
what you actually said:

>> Who cares? Maybe 0.00000000... percent of the population. And
>> it's a segment of the population society would probably be better off
>> without, often proven by the rec.radio.* groups in general.

Although both the logic and the grammar are pretty convoluted,
the way it reads is that you're saying that society would
be better off if the segment populating the rec.radio.* groups "in
general" weren't there. If that's incorrect, you may want to try
restating it somewhat more clearly.

>At this point, I'm just one
>loudmouth yelling about another. (meaning cheeks)

You came flying out of the box with your flame
thrower aimed at somebody who had said not one word to
or about you. For whatever reason (needing attention, I guess)
you tried to pick a fight, and you succeeded.

>There aren't many people that care.

Oh really? So you now represent many people? Did they
elect you, or did you just bully them into submission? Let
me make it clear to anyone reading this that you do NOT
represent me or my views on this or anything else.

>Okay. But you have to admit, you also post with that kind of attitude on a
>daily basis, it's just to different people. It's amazing at how different
>the attitude becomes when you pick on somebody's buddy rather than the
>person they like to pick on. It's pretty much that simple, isn't it?

No, sir, it isn't that simple by a long shot. I'm once again getting
lost in your convoluted sentence structure, but if you're saying

what I think you're saying, see the top of this post. The "attitude" with which I respond mirrors what I'm responding to. You made reference to me in a post. I responded. It's THAT simple.

Michael,

Short the gnd side of the BNC connector to the shoulder of the earphone jack (ring). This will increase the volume at the earphone significantly.

He'll probably never read this on the newsgroup, but Scott Bias
(CTPDS49@aol.com) and I have been arguing about his posts being spam.
He's says they're not, I say they are.

Anyway, here, Scott, is the DEFINITION OF SPAM, and it APPLIES DIRECTLY
TO YOU:

-Located at http://www.cybernothing.org/faqs/net-abuse-faq.html#2.1
'The term "spam," as used on this newsgroup, means "the same article (or

essentially the same article) posted an unacceptably high number of
times
to one or more newsgroups." CONTENT IS IRRELEVANT. 'Spam'
doesn't mean "ads." It doesn't mean "abuse." It doesn't mean "posts
whose
content I object to." Spam is a funky name for a phenomenon that can be
measured
pretty objectively: did that post appear X times?'

You should take a look at this FAQ at
http://www.cybernothing.org/faqs/net-abuse-faq.html.

> Okay.. Define helpful.. If the person is looking for a service
manual and
> sees our post and finds what they are looking for THAT IS HELPFULL..
>>

You NEVER have posted ANYTHING about a service manual. The only messages
you've
ever posted deal with frequency descrambling.

> What you are calling spam is your opinoin.. Finding a product you
are
> looking for in a related newsgroup is useful. Anyone thinking
otherwise is just
> hung up on this silly non-commercial nonsense..

No, spam is a constant post that is not directed to anyone. You post
them every
week, and it isn't FOR anybody in particular.

> What would be the appropriate newsgroup? In your opinoin of
course..

alt.ads[.forsale]

> Finding the service manual you have been looking for in not on
topic???
> Adding a signal meter to your scanner to measure signal strength is
> not on topic??? NONSENSE....

Both of which have to do with the illegal modifications of scanners.
Hmm,
providing illegal services, eh? You can be held responsible for that...

I have a Bearcat 200 XLT and have a few quesions I hope
someone can help me with.
The unit is like new, hardly ever used and the battery is dead.
well I think it is, you can charge it and it works for like 2 mins and
then gives low battery and thats it, new battery or ?
Where can I get a cheap price on battery?

second it scans very slowly, someone told me of a mod to make it
scan faster, not sure of the speed, but anything would help.
What is the mod and is it hard to do?

thank you for any info or ideas

2687. Question about antennas

Newsgroup: rec.radio.scanner
Date: 1998-07-19 00:00:00 UTC
From: greg.miller@usa.net
Message-ID: <35b31d70.155137090@news.alt.net>
Source record: 151842

I'm looking for information on what type of antenna I should
get. I just purchased a Radio Shack Pro-2042, and bought a cheap $19
antenna to use for now (cat no 20-176). I've read the FAQs, and
searched for information, but can't find any decent info on what types
of antennas serve what purpose. I'm under the impression that the
antenna used makes a big difference in performance, so any information
anyone can give would be greatly appreciated.

>also the FDNY relys heavily on thier mdt's any way of decoding >theese.

We use MDT's too. I don't believe that there is ANY way to decode or monitor these tranmissions, since they are true data bursts. All that is going over the air are "1's and 0's", so short of recreating the appropriate MDT in your living room, I don't think you can get there from here.

>>Is it not?
>
>The way I respond to intelligent, well-
>meaning posts is different than the way I respond to juvenile,
>combative posts like yours, if that's what you mean.

That's all very subjective. Like almost everything else said here, it works in all directions. You often respond to people who didn't direct anything at you, and as you mention, you respond in a like manner. And that's what I did with cheek's whiney post. Still not sure how that's different from what you do.

>>> Who cares? Maybe 0.00000000... percent of the population. And
>>> it's a segment of the population society would probably be better off
>>> without, often proven by the rec.radio.* groups in general.
>
>Although both the logic and the grammar are pretty convoluted,
>the way it reads is that you're saying that society would
>be better off if the segment populating the rec.radio.* groups "in
>general" weren't there. If that's incorrect, you may want to try
>restating it somewhat more clearly.

You are often more concerned with grammer and spelling than you are with concepts. I'm not sure how that pertains to the argument. That's just name calling. And yes, that was just a generalization that applies to the largely aggressive outspoken of the groups. These groups have a flame count more like politically charged groups rather than technically based groups. Although you seem reasonable at times and you have the decency to not be anonymous, you can often be one the prime examples. As I admittedly was with my response to cheeks' silliness.

>>At this point, I'm just one
>>loudmouth yelling about another. (meaning cheeks)
>
>You came flying out of the box with your flame
>thrower aimed at somebody who had said not one word to
>or about you. For whatever reason (needing attention, I guess)
>you tried to pick a fight, and you succeeded.

There's no denying that. You do it all the time. You're always one of the first in line of the cheeks/mackey threads. And again, I responded in the same tone of voice as the post, just like you. Certainly you aren't

claiming that you only respond to posts that directly involve you (?)

>>There aren't many people that care.
>
>Oh really? So you now represent many people? Did they
>elect you, or did you just bully them into submission? Let
>me make it clear to anyone reading this that you do NOT
>represent me or my views on this or anything else.

Gosh, I think they understand that. Another one of your standard lines in every argument. Then I guess nobody can say anything because nobody can speak for all people. As usual, this works in all directions. So I guess I'll also have to start using the disclaimer that you do NOT represent my views either. I'm almost ROFL... if that weren't already glaringly obvious, this discussion wouldn't be taking place.

>>Okay. But you have to admit, you also post with that kind of attitude on
a
>>daily basis, it's just to different people. It's amazing at how different
>>the attitude becomes when you pick on somebody's buddy rather than the
>>person they like to pick on. It's pretty much that simple, isn't it?
>
>You made
>reference to me in a post. I responded. It's THAT simple.

The only mention of you was a positive thing. That you were at least open-minded enough to give me the time of day when I initially started making comments on this group. So you're mirroring this positive comment by tearing my post apart?

>You are often more concerned with grammer and spelling than you are with
>concepts. I'm not sure how that pertains to the argument. That's just name
>calling.

No, it isn't. As I explained in my previous post,
it wasn't clear to me what you were saying. I checked
both my eyeglasses and my monitor screen and
both were clean. I don't take drugs, and I was wide
awake, so that left poor communication skills as the culprit.
I fail to see how you change that into name calling, but then,
I fail to see most of what you're saying!

>These groups have a flame count more like politically charged groups rather
than >technically based groups.

Since when were these technically based groups?
Maybe that's the problem. You're reacting to variances
from YOUR EXPECTATION of what should be posted.
Sorry, old man, that dog won't hunt.

>And again, I responded in the
>same tone of voice as the post, just like you. Certainly you aren't
>claiming that you only respond to posts that directly involve you (?)

No, I'm many things but hypocrite is not one of them.
There's a difference between responding "in kind" and
flaming for the sake of flaming.

>Then I guess nobody can say anything because nobody can
>speak for all people.

You just don't get it, do you? You can speak for YOURSELF til
you're blue in the face. I disagree with pretty much everything
you've said, but I will defend until I'm dead your right to say it.
So, you tell me what YOU think all day long and I'll believe it.
When you start claiming to speak for "everybody", "all", "99% of
the people", "lots of others", "many others", "most others" or
any other variations of the theme, you're going to have a really
hard time proving to me that you have any knowledge or authority
that empowers you to superimpose YOUR opinions on other people.

>I'll also have to start using the disclaimer that you do NOT represent my
>views either.

You're damned right I don't, nor anyone else's but my
very own. The difference between us is that I've never
claimed to speak for anyone else.

> So you're mirroring this positive comment by tearing my post apart?

Oh, geez, Brad, whadd're ya gonna do now, cry? Give me a
break. You shoot flames from here to breakfast and I'm supposed
to buy this picture of you sitting there with your lip quivering and
your eyes welling up because I "tore your post apart"? My bad. I
just can't seem to stop giving you more credit than is due.

I don't see how redirecting the transmission across citizens band would unscramble anything. I did see an idea mentioned where you txmit via CB but use a receiver that has a BFO to try and fine tune the signal. I've also heard from several people that this doesn't work either.

I heard that they couldn't keep up with the competition with Fry's Electronics down the street on Hamilton and were going out of business, at least for that location. If anyone has any information on how I can intercept the police scanner radio waves for San Jose Police Dept. over the net such as some of the other Police Dept. at www.policescanner.com has to offer I would greatly appreciate any helpful information on how to go about doing this. Please email to markus@sj.bigger.net with any information. Thanks.

I am not slamming aor but it seems very odd to me that they did not include the option to trunk track with their new scanner. I live in the seattle area and that is the only game in this town. If not for that, i probably would consider selling my ar 8000 and getting the new scanner. But in reality, how much time is left until all signals are some form of digital this or digital that. Will this scanner grow with this new technology in the not so distant horizon. I "accidently" tuned my 8000 into the cell frequency range and was totally amazed at how little traffic was on the airwaves. Don't go here anymore because not very interesting and not enough activitly ie, pcs and digital are taking over that industry. Have a good day.

Tyson,
Try 153.995; that's the frequency that the latest edition of Police Call lists as F-4 for Salt Lake County PD. I believe it's the Salt Lake County PD car-to-car frequency.

2709. BC-235XLT leather case question?

Newsgroup: rec.radio.scanner
Date: 1998-07-19 00:00:00 UTC
From: n8rxx@aol.com
Message-ID: <1998071922582300.SAA28071@ladder01.news.aol.com>
Source record: 151864

I'm looking for someone who uses the soft leather case for the BC-235XLT. This is the case that is purchased from Uniden. I'm wondering: 1) Can the power cord be attached while the scanner is in the case? 2) Does the case have a belt clip or a loop? I called Uniden to get this info but they didn't know. It's pretty sad that a company can sell a product but not be able to give the buyer a description.

What I'd really like is a hard leather case with a belt clip but I can't find one anywhere. Any ideas?

Please email N8RXX@aol.com

Thanks,
Rafe Barber

I tried e-mailing you but you address didn't work!
Do you know if radioshack still sells the kit? If not, could you send me
the directions, parts list, and schemactics for it? Fix your e-mail address
and e-mail me back. Thanks in advance.
~NICK~

Sure--
Just press zero-one to lockout chan 1, one-one to lock out chan 11, etc. If you then manual thru the channels they'll show a 'L' on the right side of the display.

Howdy!

While listening to the scanner at a local railfan hangout I've noticed that a few moments before the CSX dispatcher and a train begin communicating I hear a certain tone for about 3 seconds, then a pause, then another shorter tone. I've noticed the same thing on Grand Trunk Western's channel as well. What is the technical name for these tones and how do they work?

Thanks

2719. FS - BC-3000xlt w/ Leather Case

I have been thinking about getting a trunk tracker base model. but i
have been wondering will it help me? mostly i listen to the NYPD & FDNY,
and i dont think they are trunked
i know there was a new channel plan for the nypd released in march. and
i hear the pd still has a lot of changes ahed. anybody in the ny metro
area hear anything about trunking?

also the FDNY relys heavily on thier mdt's any way of decoding theese.
since i started scanning i have become a fire buff ;)

i aprecate any info you send my way. i would be happy to swap freqs,
always looking for more

btw i got a pro 64, wow a great improvment over the pro 67, and at $100
a steal!!!!

>the technical name for these tones and how do they work?
>
>Thanks

On some railroads, the mobile unit (train, etc.) keys in an audio
tone to notify the dispatcher that they are calling. They are called
various names on different railroads, such as "call-in" tones or
"dial-up" tones. These tones can be a
single audio tone, or a series of touch tones, depending on
the system. The dispatcher's console is usually set up that it
will automatically send an acknowledgment tone to be
transmitted by the base station that received the call in. This
reply tone lets the mobile unit know that the call has been
received and the dispatcher will answer as soon as he/she
can. Without the reply tone, the mobile unit would not know
if the dispatcher has been notified and they might keep keying
up a bunch of times. Sometimes it may take several minutes
for the dispatcher to answer, as he/she may be on the phone,
talking to someone on the opposite end of the territory, or
talking to another train that the mobile unit can't hear.

Most systems are set up with some provision for an
emergency call in so the dispatcher will answer that
one immediately.

I am happy with it - works better than I expected.

The company also keeps upgrading the software and adding features and
is good to deal with. I will be also buying 1500 as soon as available.

Hope this helps

And how would that do anything? It would just transmit the phone conversation on CB.

Anyway, no. If you have a cordless phone with voice frequency inversion, you COULD (if you have two scanners, or just one and a tape recorder) play it back through your phone, and listen to it on your phone's ouput frequency... Different phones have different inversion points, but you still may be able to hear.

Another aspect I originally overlooked, was your detector may indeed have Ka band capabilities, however after Ka band was originally introduced, they expanded it once and maybe twice from Ka band to Ka Wideband and Ka Superwide band. It is possible that you have an older detector that detects only the original Ka band. The radar detector manufacturers LOVE this stuff....makes their product "obsolete" so they can design and sell a whole new line.

I am curious. You said you had a K-band unit you were using for boats. Why did you spend the extra money and get the Stalker unit??? I know those things are pretty expensive and not something the average hobbyist could indulge in. I have seen K-band units at hamfests for around the $150-200 range. I am sure the Stalker units run at least 10 times that much.

>enthousiast.

Equipment only becomes expensive when the hobbyist does not already possess a computer, or when encryption is involved, or when the protocol is new and/or complicated enough to require outboard decoders. Other than that, everything you say is right on.

There are programs that do just about everything already. Still a few protocols that are being hashed out, but there isn't much digital (yet) that can't be at least analyzed. We aren't to the point of monitoring clear voice on Astro or EDACS Digital yet, but I'm sure we'll get there. There are also a few non-Motorola MDT systems (like the one in my area) that are currently monitor-proof. Trunking is pretty well cracked, although some types are easier and require less equipment than others. APCO 25 stuff is not commercially available, but I'll bet someone is working on code for it.

Programs exist for the major US paging protocols, too. Next thing you know, somebody will be posting hacker URLs for full versions of radio and pager software. Haven't seen any yet....

Well, Andy... My old K band gun was an old Decatur police radar - the sort you usually find at hamfests. Quite frankly, it didn't work all that well. It would only get an accurate clock on a boat at about 1000 feet. That wasn't quite good enough for my purposes. The new Stalker gets an accurate reading at darn near a mile.

Incidently, the Stalker Pro sells for about $1400. They have models for as low as $499. A friend of mine has a used Stalker Pro for sale for under $1000.

By the way... Do you know if 34.7 Ghz is in the "wide" or "super wide" Ka band?

No, FOOL, you better review the old messages as OBFD was the one to
bring up the issue initially. I responded stating that without
proof we should ignore it as mere rumor with no proof.

You really have warped style of thought!

Can anyone recommend a good data base (or two) suitable for my ham radio and scanner activities? I would like to keep track of the frequencies I hear on my scanner, and the ham data base would need to keep track by callsign...so I would probably need two seperate data bases programs.

The kicker is - I'd prefer either free or really cheap software - like always - monies tight.
Nothing over $10 bucks tops.

Any recommendations would be appreciated -

Fred

>don't bother looking at those, trust me."

By offering a list of filters, folks are only offering an opinion.
Don't feel bad if they choose to ignore you. It may not be for your
inadequacies, so much as theirs. It may be for reasons such as
frequent response to flame bait, a point of view (reasonable or not),
or it may be a slip of the mouse.

>#2 Taking pot shots and then using filtering to duck the responses.
>Kinda like a kid who throws a rock and runs.

I don't understand. It seems to me you're taking offense that someone
chooses to ignore you. Regardless of what you think, it is their
right to do so. Their reasons may have nothing to do with reality.

>Now you're neck deep in filter evil #1. And you're going to have to
>respond to this post in order not to rack up credit for filter evil #2.
>
>That's what it's about Pat. I'm taking issue with the way you're using
>filters and lists.

That's too bad. Pat's filter set is his business, not yours. He has
no obligation to read one word of your opinions. He can "misuse" the
filters if he wants to. You're the one responding to his opinion.

>Me? I don't have a filter list.

I'm impressed. With a stomach that strong you ought to be able to
swallow this post without a problem.

>But I do have a sh*t list.

And what do you do with that?

>Care to dance Pat?

I'm going to evaluate your postings depending on what you do with the
fact that Pat's on your "sh*t list." If you're a Gentleman you'll
leave things right as they are. You'll have my respect for doing
that, and my admiration for watching everything in this news group.

As for me, I use filters, though I don't publicize who is in them. I may put you in there one day, or I may not. Either way, I'm not going to give you the pleasure of knowing where you stand.

I doubt your ego could handle it.

>>
>> I've never noticed the beeping tone. Maybe I've just been hearing the
>> unit's transmitter on the extender freq.
>>

The beeping refered to in an earlier post is an audible beep INSIDE the
CHP vehicle, not transmitted over the air.

>The Mobile Extender frequencies are assigned the callsign of KA 4993.

Actually, that's the callsign of the entire CHP mobile radio system,
primarily in the 39 & 42 MHz spectrum; also used on the extenders.

>
>I have noticed "speed limit enforced by radar" signs along the freeway
>and on occasion I have seen CHP officers with radar guns.
>
>Can anyone confirm that the CHP is now using radar?

CHP doesn't normally use "guns". Four several years they have had
permanent type radar units in most of their enforcement vehicles. The antenna
is usually mounted on the driver's side of the lightbar system.... and most
Federally funded units are operating on 24 MHz I believe.

Ed

2771. Hoka Code 3 for sale

Newsgroup: rec.radio.scanner
Date: 1998-07-20 00:00:00 UTC
From: "Bradley S. Stone" <nb9m@reliable-net.net>
Message-ID: <6p0jeq$q09$1@news.indy.net>
Source record: 151706

I have a complete Hoka Code 3 demodulator for sale. I've only used it a few times. I will ship it in its original box with all documentation and sales receipts for $300 to anywhere in the CONUS (firm.)

This demodulator was purchased for $595, and nails most "esoteric" as well as the common digital comms. The WEFAX is particularly good. I recommend a tight, well-filtered receiver for its use.
Thanks,
Brad, NB9M

2775. Life Cycle of the common Mackass (Loonious Frigginous)

Newsgroup: rec.radio.scanner
Date: 1998-07-20 00:00:00 UTC
From: Phil Smalley <psmalley@mail.hac.com>
Message-ID: <6p0mvq$rof@hacgate2.hac.com>
Source record: 151710

Tune in to the Discovery Channel tonight and watch my latest documentary, the Life Cycle of the Common Mackass. I have carefully tracked and documented this common usenet pest for the betterment and understanding of all usenet posters. Here is a sample:

The Mackass is a subspecies of the loon. It has a similar IQ, yet it's call is most unusual, sounding like "FOOL! FOOL!". Often it can be heard reverberating throughout it's cyberspacial domain during twilight hours.

It is an unusual looking creature,with large bulbous eyes, slack jaw and sunken chest. Usually solitary and quiet, it often attacks nearby users whenever it wants to appear bigger than it actually is. The Mackass is capable of inhaling large amounts of hot air, dispelling it loudly at passersby. Scientists believe that the Mackass thinks it is frightening away it's enemies, although the action serves no real purpose in nature.

The mating habits of this unusual creature are as of yet unknown. We believe that the Mackass we tracked is either not mature enough to mate or reproduces by some other means. Some scientists have gone so far to speculate that Mackassi are hermaphroditic, however we were unable to either prove nor disprove this theory.

Our conlusions on this unusual species are simply that much more study is needed before this creature is fully understood. However, the proliferation of usenet readers with filtering capability, apathy and general dislike of this animal may drive it to extinction soon. It's numbers are already dwindling, and trends are showing that the Mackass's decline will continue. Until then, we will continue to track the evolution (or lack thereof) of this strange and hideous creature.

;-)

>sc150b, a cheap scanner that I was thinking about getting.

Ah, but it CAN!

For those who may be tempted, save yourself some cash. Go get the SC150 (or any el-cheapo dual conversion scanner with 800 Mhz in it) and then do the following:

For cordless: search 46-47 and 49-50 MHz. Cruise around your neighborhood/apartment complex for best results

For cellular: search 896.1125 to 912Mhz or higher. Receives cell images (actual cell frequency is either 21.4 or 21.6MHz lower than frequency received, depending on the scanner's IF)

I have the BC 230 xlt, cell blocked, which does the above just fine. No doubt the SC150 is the same.

I'll have to watch for this commercial - I'd love to get it on tape!

Hi Greg,
Of all the antennas I own, (dozens), my absolute, all around favorite, if I only could have one, couldn't live with out, base antenna would hands down be the Channel Master Monitenna. Look it up on both the Amatuer Electronic Supply and Stark Electronics web sites and compare prices. Don't be fooled by cheap imitations like the Scantenna that Grove sells or the same thing that Radio Shack sells. I own both and prefer the Channel Master.

Best of luck,
JungleJim the antenna fanatic

I just called 1 800 324 8828 and mentioned my interest in the advertised
scanner which is used for picking up cellular and cordless phone calls!!
They hid nothing,very proud of their scanner,the Uniden Sportcat for
$188,25 incl.shipping!!
The young lady said you press 1 button to receive cellular and I asked
exactly what freq.the radio picked up,she immediately was lost and then
I got a technician who quite frankly told me this exact unit is on sale
at Circuit City for $40.00 more,I said it is illegal to buy a
scanner that receives cellular,and Bingo,the truth came out,he told me
it receives cellular images between 894.000-906.000,no mods on this
radio,it is stock!!! Thats the real low-down,
he said they send instructions on how to program search to find cellular
or cordless,that is the one button tuning!!!Also send a freq.guide!!!
Happy Scanning!!!
I knew it was a scam!!!!! But that unit must pick up some heavy images
to be advertised like it is!!

I suspected this to be the case. Sounds like some of the "deals" people have
tried to swing in here. No deal, just lies and misinformation, as usual. End
result: You just bought a $129 scanner for 180 bucks.

I am surprised to see this scam running on TV though.. God, I wonder how
many suckers bought into that crap...

Further proof that P.T. Barnum was right... sad...

The soft Uniden case does allow for power connection. It has an opening to allow use of the plastic belt clip which came with the scanner. In the case of mine at least, it fits absolutely perfectly.

Grove sells hard cases. I got one, but sent it back; it was just too big, heavy, and hard for my taste.

2805. Did anyone see scanner commercial?

Newsgroup: rec.radio.scanner
Date: 1998-07-20 00:00:00 UTC
From: cbake777@aol.com
Message-ID: <1998072004021900.AAA22348@ladder03.news.aol.com>
Source record: 151745

My son says he saw a commercial for a scanner today (doesn't know what company). He said that it touted being able to receive cordless phone conversations so that you would know what your neighbors were up to and cellular phone conversations....he said it was quiet funny, something about an old lady surrounded by scanners. Does anyone know what this was? He thinks it might have been on Discovery channel, The Learning channel or E TV.

Source record: 151747

Please excuse me if this is not the appropriate forum for this question, but I didn't see a specific one. In which case, would someone point me to a better place?

Now the question: I have a radar gun that I use for boat racing. It operates on the Ka band. (34.7Ghz)

The radar detector that I have in my car does not respond to this radar. I had an older radar gun that operated on the K band (24 Ghz) that drove the radar detector out of its tree over a mile away.

Do I just have a frequency challenged radar detector, with most radar detectors responding just fine to Ka band radar, or do most detectors simply not dectect Ka band radar?

....Ed....

No, wrong. The defense would be dismissed because of "dirty" evidence (in other words, evidence produced in an illegal way). The plaintiff (of say, a telephone crime scam, where the defendant used his cordless), would be the one held responsible.

If OTHER evidence was found, then yes, the defense *would* be also guilty (along with the plaintiff).

The Mobile Extender frequencies are assigned the callsign of KA 4993.
CHP has merged with the California State Police. The CHP can use the
former CSP frequencies.

The CHP is now using some of the former LAPD 39 MHz Frenquencies.

I have noticed "speed limit enforced by radar" signs along the freeway
and on occasion I have seen CHP officers with radar guns.

Can anyone confirm that the CHP is now using radar?

This report was generated by PerCon Corporation -
http://www.perconcorp.com.

Data was extracted from a complete SPECTRUM database as of Summer 97, newer
than most other CDROM Databases.

If you need more current or more complete data, PerCon has the following:

SPECTRUM / Summer 98 Spectrum is a FCC Frequency Database of the entire US.
It contains over 3.3 million records (all FCC licenses- all frequencies),
with 15 fields of information. The system supports query, multi-browse
screens, reports and export to a UFDBF File. Operating systems are DOS,
Windows, Windows 95,Windows NT and Mac. This a hobbiest level product and
is extremely easy to use. Get them while supplies last !!! See SPECTRUM /
Summer 98 for more information. $37.45 (Includes 2 Day Shipping)[Image]

Professional Series The Professional - Regional Series is a set of CDROMS
that covers the US (all FCC licenses- all frequencies). Each has over 72
fields of data. It is the most comprehensive dataset available, with the
most powerful search-engine available. Program runs under Windows / Windows
95 / NT. This is an advanced hobbiest and commercial level product.
Professional level products are published quarterly. See Professional
Series for more detail.

> detectors responding just fine to Ka band radar, or do most detectors
> simply not dectect Ka band radar?

You probably just have an older detector that won't pick up Ka band.
All of the detectors on the market now pick up X, K, and Ka band. When
detectors were first introduced on the market, the only thing they could
detect was X band, since that was the only frequency used in police
radar. When K band was introduced, it made all of the X band detectors
obsolete so the manufacturers came out with the X & K band detectors.
Now you are seein the same thing with Ka band.

BTW, a Ka band radar unit to check your boat?? Thats pretty high end.
What brand/model is it??

Andy

2819. Re: Highway Patrol Mobile Extender (KA 4993)

Newsgroup: rec.radio.scanner
Date: 1998-07-20 00:00:00 UTC
From: Mike Derryberry <michael.derryberry@MCIONE.com>
Message-ID: <01bdb3bb$afbd0aa0$931537a6@default>

The call sign KA 4993 is the call sign for the CHP mobile unit on 42mhz. It is a statewide call sign good for all of their mobile frequencies. And yes, the CHP has finally moved up to the 20th century and is using radar on most freeway in the state. Oh how I hate radar.

The only area they are using the old LASO 39mhz frequencies is in the Border division, San Diego, Orange, parts of Riverside and parts of San Bernardino counties.

I have a complete statewide frequency list for CHP by dispatch centers and divisions. If you need it let me know. (It is current as of April 1,1998)

While the unit is in the scan mode, just hit the number keys for the channel you want to lock-out. Do the opposite to put back in the scan sequence.

Good luck ...

You sure forget things you do , must be all the drugs your taking.
All I asked was a simple question about you showing proof of the
warrant.
I did not say anything about specific charges so it could have been for
a parking ticket as far as anyone else knew, but you had to come out
with specific information using the pretense of defending Bill and in
all actuality you were flaming Bill again.

And that most assuredly proves your the one who made the story up to get
back at Bill , otherwise you would be showing proof of the accusations,
which you cannot because you know that you have falsely accused Bill and
don't want everyone to know that you are nothing but a petty liar with a
personal vendetta.

Shows how sick you really are .

Hi Duane!

Try these. I don't listen to traffic helicopters myself
(except on the VHF freqs) but these are the ones listed:

455.5125 CS Shadow Traffic
450.8250 110.9 Airwatch Traffic
455.9500 141.3 Metro Traffic (Primary)
450.9500 141.3 Metro Traffic (KIIS)
450.4500 94.8 Metro Traffic (KLSX)
450.7500 131.8 Metro Traffic (KMPC)

123.025 Helicopter Air-to-Air Primary
127.775 Helicopter Secondary

You might try listening to the Freeway Service Patrol
frequencies:

453.975 136.5 South LA Area
44.140 D631 Orange County

And of course, CHP broadcasts Sigalerts on Blue:

42.340

Hope this helps on those looonnnng commutes! 73.

Rich.

Yikes! You're asking for a lot of frequencies! Your best bet
would be to purchase a copy of Police Call's Southern California
edition or Metroscan. These frequency guides contail all the
info you're looking for and then some. They can be purchased
at Jun's in Culver City or Ham Radio Outlet in Burbank or
Anaheim, as well as other ham radio and electronic stores in
the area.

Rich.

Not likely; they dropped their plan for a statewide 800 system a year
or two ago, going in favor to absorb the old Baltimore county 39 mhz
system and revamping it so most-tho not all- barracks have their own
frequencies. Where did you hear this? Or are you possibly confusing
this with Baltimore City, which indeed is going 800 mhz trunked?

From: Phil Smalley <psmalley@mail.hac.com>
Message-ID: <6p35e5$la1@hacgate2.hac.com>
Source record: 151580

Mr. MacKey wrote in message <35B51371.46F@PARG.ORG>...
>Bill, you said you had the ultimate kill file & would never
>be seeing my messages again & never responding to my messages
>again. That was only a week or two ago & since you did that
>there was a GREAT reduction in the problems on this NG.
>
>Why have you changed Bill?
>

>The subject did not involve you!

What's did you expect, Loonball? You won't shut up, so why should anyone else? Jeez, I just love the way you twist the truth to serve your own demented purpose. Just so that were clear on a few things, allow me to make the following statements:

I too have the ultimate killfile. Right now I have it set to show your messages in blue. So far it hasn't missed one. And, at a time of MY choosing, I will hit the magic button and you will disappear, for as long as I wish it. Then, should I change my mind, I will hit the magic button again, which will allow your posts back onto my screen, in the telltale "It's another message from the loser" shade of blue.

Furthermore I will choose to respond or not respond to your posts anytime I wish. I will also take the liberty to post whatever I want to, whenevever I want to, be it on topic or not.

If this bothers you so much, then perhaps you should leave. If unsubscribing from this newsgroup is too technically challenging for you, I'd be glad to provide instructions.

Now that I have properly informed you, you are free to go. Carry on, fruitcake.

>YOUR statement, you only make senseless beligerant statements.

Oh I'm sorry - here I am trying to have a battle of wits with an unarmed person(?!). My mistake. Let me explain it so even you can understand.

1. You claimed that you could not have posted to that open server in Spain because you are on the west coast, and the posts originated from the east coast.

2. I replied that ANYONE can dial up an AOL server ANYWHERE and make it look like they posted from there, therefore your assinine post proves nothing.

3. You continued to stand behind your warped logic, proving that you don't know a damned thing about AOL, the internet or anything else Your continuous stream of bullshit and lies proves the real reason you are here. In all honesty, you should thank me for even acknowledging such a ridiculous spectacle of...well, I was going to say humanity, but that might be stretching it. At any rate, be glad that someone, ANYONE even bothers to talk to you.

>
>How typical of Bill!

Still delusional I see. You just can't stand the notion that there might be someone besides Bill Cheek who thinks you're an imbecile, can ya?? Can't bear the thought that YOU are the only one who has to make up imaginary friends to back you up huh? Awwwww, now ain't that just some shit???

You friggin LOON!!!!

Motorola Handie-Talkie Set

Includes 6-gang quick-charging station, 14 Motorola HT's of which about half are MX-340's and the other half are MX-360's (larger and higher power), 3 are misc manufacturers. All are in good condition, some with minor scratches. These radios all operate in the frequency range between 130 and 174 MHz (VHF). There is at least one battery per radio, probably more. Some of the batteries take a charge well, while some need "zapping" to bring them back to life. There are about 6 rubber duckie antennae that screw on. Included is a large bag of crystals that were pulled from the radios when they were sold in order to render them inoperable. The crystals are simple to insert, and clearly labeled for their TX and RX frequencies. I have spot checked about three of the units and they transmit and receive fine with good solid high output power. Good for camping, fishing, or starting up your own police SWAT unit. High bidder takes the lot with a COD money order or certified bank check. Total shipping weight will be close to 40 pounds with packing material.

Please bid this item at ebay.com:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=22285839

thanks

There are quite a few basic mods that you can do to any scanner if you
know the fundamentals and take the time to apply them to this model.
For pretty detailed instructions on tapping the discriminator for the
SC, go to http://www.cylexinc.com/rmpe01h.htm.

I have four ten foot copper ground rods around the base of my antenna. One of them is copper plated steel. It had to be driven in with a sledgehammer, starting from the top of a stepladder. The soil here is clay and gravel, and it did hit rocks on the way but eventually went in. Then I pulled it out, using a chain and car jack, and immediately replaced it with a 10 foot copper pipe which had 1/4 inch holes drilled in various places around the bottom 7 feet. The process was repeated 3 more times! I periodically feed them with a solution of water and salt. It has been deep enough that there has been no damage to the lawn. The hardest part was driving the solid rod in -- but that can be made much easier if you can talk a young fellow into doing it -- which I did. It's not easy, but for a hobby which will be with you all of your life, it's worth the trouble.

>There MUST be an easier way!!!! (isn't there??? :(..) I'm in upstate NY with
>lots of clay-ish soil. Let alone any rocks I may hit along the way. Argh!!

I used a three pound sledge hammer to pound my ground rods in. I
have clay soil too, and it took about 15 minutes, I'd guess.

It's a little awkward starting out, but it's not too bad.

As I was pounding it in, I was thinking that there's a better way
to do it. Something like this:

Take a piece of 1.5" OD PVC pipe about three feet long, and
put about one foot of it over the ground rod. Then take a three foot
piece of 1" thick round steel rod and slide it into the remaining two feet of the
PVC pipe till it touches the ground rod. To pound the rod in, lift
the 1" rod a foot or so, and then drop it - and repeat. Basically
a little pile driver.

Hope this helps

- Corey

Message-ID: <20274-35B55F2F-10@newsd-153.iap.bryant.webtv.net>
Source record: 151605

Stick with the RG-8. The RG-8/ mini 8 / RG-58 are all 50 ohm coax, which matches your scanner and antenna. The cable TV coax is 72 ohm, which will work, but not be an exact match. You will loose a little (howbeit "very small") amount of signal with the mismatch. BTW, I have used CATV coax on many antennas in the past with good results. The nice thing is that most cable repairmen will give small amounts of cable and sometimes even what's left on a spool if you tell them what you want it for, and assure them you're not trying to hook up to their system!

I don't know if you found any freqs., but I got 123.450 for some of the
the pilot's P.A. to the audience (the "discreet"? frequency they called
it). At this show 2 years ago, I got Wigen "Cyclone" aerobatic on
123.150 just by chance (123.150 is listed as a helicopter co. freq. for
Victoria!)
Snowbirds have been using 272.100 at the shows I've been to in the last
2 years:(Abbotsford, Kelowna, Pitt Meadows, Victoria)!
I'v got 2 scanners and a cheap Radio Shack analog AM band radio - that
little thing is the greatest $25 investment I've ever made! I hope the
Abbotsford show is back next year...boo hoo hoo...

OK, is there something incorrect with the statement I made above?

> Good Bill! Would you like to confess about that warrant for
> the arrest of Bill Cheek with San Diego PD (your resident city)?

Here again, I have NOT accused Bill of any type of wrong doing! I
simply
asked him if he would like to confess to the warrant! I never even
said what the warrant was for!

That is what you said then , but you have sure made up for it the last
few months when you skirt around when asked about the proof.
So that everyone gets this straight , what your saying now is you don't
know if there is a warrant out because you have not seen any proof or
had any other verfication that it does or does not exist.
Is this a correct presumption on my part ?

So now it is "tit for tat"! Bill stated that I did prison time (without

giving ANY proof or evidence) so I ASKED if he did prison time!

What's wrong with that?

I will give you half a point on this one, but also you have to remember
Bill did not say what you were suppose to have been in prison for.
He did not attempt to accuse you of a specific crime under the pretense
of defending you like you did with him .

You can always place the antenna vertical, the one I have from radio shack is designed so you mount it horizontal or vertical, the tv antenna does not know which position it is in .
So it makes an effective beam for scanner use where there is a need for more gain to receive a weak signal or to be able to reject a strong signal and listen to a particular area within a city.

Being an Amateur radio operator you should know that .

I have the following for sale:

AOR AR8000 handheld scanner: 500 KHz - 1.9 GHz continuous, *unblocked*, 1000 channels in 20 banks, NFM/WFM/AM/USB/LSB/CW, w/narrow AM filter installed by Javiation. Includes AC charger, DC charger, 2 ducks, heavy leather case, manual, and box. Cosmetically and electrically perfect.

Optoelectronics Optolinx: Computer interface for many radios, including the AR8000, as new in box. Will also include a copy of "Radio Manager" software for programming the AR8000 (Win3.1 package)

$550 for all + shipping, firm, no trades, and I won't separate the items
---

Kenwood TR9130 2M all-mode rig: older 25W, FM/CW/USB/LSB rig. 5 memories, RIT, scan. Includes copy of owners & service manual, DC cord, mounting bracket, and TT hand mic. Rig is a cosmetic 7, and is functionally perfect *except* for the Hi/Lo power output switch; it only outputs Hi power.

$225 + shipping

Please drop me a note if interested.

73,

Paul WD8DKY

2895. re: headphone impedance question

Newsgroup: rec.radio.scanner
Date: 1998-07-21 00:00:00 UTC
From: jscarfone@my-dejanews.com
Message-ID: <6p24k6$7mf$1@nnrp1.dejanews.com>
Source record: 151631

I've gotten mixed responses from the below question. It looks as though both headphones together will look like an 8 ohm load. Some thought though that I would either overload the scanner or the audio would sound bad. Does anyone know if the headphone circuit is different than the internal speaker circuit as the internal speaker is an 8 ohm load and that obviously does not overload the scanner. I haven't got a technical answer from Uniden yet. What if I turn down the volume controls ON THE HEADPHONES. This has the effect of raising their impedance. I could balance them both at 32 ohms each giving me the same load I have with one set with the volume turned up all the way (16 ohms), no?

Thanks again all for any help!

Very interesting Rick -- it sounds familiar. I mailed YOU a $100 check for a hand held TV in May. The check cleared within a few days. Hmmm, it's now the 21st of July and still no TV. You say that it was lost in the mail and you filed a claim, but still no refund for me. To top it all off, you don't return my phone messages. Please return the money ASAP.

Mr. "I'm the most technically ignorant person I know" MacKey attempted
a coherent thought

> It will work, it jsut won't work very well. (which is what I
> originally said)

You have never measured a television antenna for scanner applications,
ergo, you haven't a clue what you're talking about (no surprise there).
See my other article (that you coincidentally missed) for the technical
details. Have someone with more intelligence explain it to you, FOOL.
It will work much better than your ignorant intellect can comprehend,
you're too stupid to realize or accept that.

> You could pound a nail into a piece of wood & use that for an antenna
> also, it just won't work very well.

Depends on the frequency you try to use it on. The average 8 penny nail,
about 4 inches long, would be approximately a quarter wave at about 780
MHz. Gee, there are lots of mobile units in the land mobile service that
use quarter wave whips about 4 inches long for service in the 800 MHz
portion of the spectrum. But, then you're too ignorant of the industry
to know that FOOL.

> Get it?

Yes, I get it. You're such a moron that if I gave you a penny for your
thoughts, I'd get change.

2905. DDI filter

hee hee hee hee...gawd, I can't help
it....I can't help it...the devil is
making me do this......I just friggin
can't help it.........ha ha ha ha

Seems my personal grapevine network
reveals that John Mackey is a Doctor!
The conjecture is born out with the
following testimonial:

============

John Mackey felt guilty all day long.
No matter how much he tried to forget
about it, he couldn't. The guilt and
sense of betrayal were overwhelming.

But every once in a while he'd hear
that small inner voice trying to
reassure him, "Look, Mackey, don't
worry about it."

"You aren't the first doctor to sleep
with one of your patients and you
won't be the last. Don't sweat it, pal."

But invariably the OTHER voice would
jolt him back to reality, "Hey Mackey,
you asshole, you're a friggin veterinarian."

Nathan-

I own both so let me put it this way: If you have never used an MVT 9000 for any length of time, you will probably be quite happy with the 8200. They are both excellent scanners, but the 9000 is tops for HF and ease of use. Only thing is that the 9000 cannot be computer controlled. Personally, I would be more apt to sell my 8200 than my 9000!

I'VE USED A WINEGARD 8200 ANT FOR SCANNER LISTENING FOR YEARS..WITH A BOOSTER ON IT. I LIVE IN A RURAL AREA BUT AND IT WORKS GREAT ..IN FACT SOMETIMES TOO GOOD . IT'S MOUNTED HORIZONTALLY AND IT ACTS AS A PRETTY GOOD DIRECTIONAL BEAM WHEN YOU CHANGE DIRECTIONS WITH IT. IF YOU USE IT IN A METRO AREA YOU MAY NEED TO INSTALL AN ATTENUATOR TO PAD THE SIGNALS DOWN .

Likely; I heard it from a MD State Trooper, and more importantly, read a (recently generated) Maryland State Police point paper & briefing regarding the planned system, and examined (recently generated) Maryland state government documents relating to the funding of the proposed 800MHz system.

>

And if you get the chance, check out how they've integrated the radar into the light bar, or on the front/rear dash...Fore and aft pointing, damn things get you going or coming. I asked about why CHP took so long to use radar. Officer said was not used until a "safe" method of using the radar could be adopted. Not sure what this meant, but guessed it referred to something other than a handheld unit. I believe at one time, before we gave it away, it was against the vehicle code to use radar by the state police...Anyone know this angle?

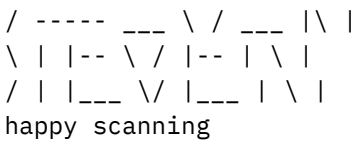
wow, i was just at radio shack, to get that antenna, 20-013. $5.00, what
a deal.
they also had the case for the pro-64 for less than a dollar. all
leather.

i dont think radio shack will be sending me anymore flyers in the mail.
in the past week i purchased $380 worth of stuff for $106



happy scanning

2937. London Underground Ops

Newsgroup: rec.radio.scanner
Date: 1998-07-21 00:00:00 UTC
From: Matthew Whitchurch <mattheww@mcmail.com>
Message-ID: <35B3CFCE.39A9F96D@mcmail.com>
Source record: 151786

Does anyone know the frequencies used by London Underground trains to communicate with Line Controllers as none of the frequency listings that I have list this information. I believe the system used is a 'Leaky Feeder' that runs parallel to the track which is used to broadcast to a small antenna situated on the front of each train.
In particular I would be interested in knowing the frequencies used by Metropolitan Line trains.

Many Thanks

MW

Try Microsoft WORKS for Windows, now in version 4.5
Check out this web site that explains all:

http://www.microsoft.com/products/prodref/568_ov.htm

In a word, WORKS is an integrated trio of a
nice word processor, good spreadsheet, and
a really slick flat-file database manager.

Retail is around $79, but you can get it on
sale or discounted for well under $50. Helluva
deal, and it's powerful enough that many small
businesses depend on it exclusively.

> The kicker is - I'd prefer either free

<cough><cough> Ri--ght.

> or really cheap software - like
> always - monies tight.
> Nothing over $10 bucks tops.

Oops. Sorry 'bout that. You gets what ya
pays for.....and WORKS is worth springing
loose some shekels for.

> Any recommendations would be appreciated -

Search the Web for the freebies.

> and a one touch for cell freqs.

the sportcat was my first scanner, a great beginner radio, in my opiontoo bad it
was stolen, so this is from memory

the busniess with the 'one touch' cell & cordless is that the sc-150 has a 'band'
key that lets you search preprogrammed bands ie. 30-50 Mhz for cordless
so that is the 'one touch', witch it really isint, say you were searching 108-136
Mhz
and now want to search the cell freq's, you would have to cycle thouugh all the
bands up to the cellular, or more if you wanted to search a lower band than where
you started from. On MY sportcat the only cellular was images, no true cellular, as
far as cordless,
big deal, 49 Mhx cordless can be heard on most scanners

> When questioned about cell freq reception being
illegal, he responded that the manufacturer (Uniden) assumes all legal
responsibility, he only did the modifications??????

I am no technichan, but i doubt this guy did any mods on the radio, you should have
asked some simple questions about how the mod was done, probably could have vetted
him out for the phoney, i believe him to be right there on the phone. as i learned
from bill cheeks faq postings, no radios sold or imported after march of '94 have
cellular or can be modifyied for cellular. as far as the legal end, that dosent
sound right to me.

All in all i think the sportcat is a good radio, especially for newbies, it got me
ito the hobby!!. i just thought you should know who you are dealing with. sounds to
me that this person is either ignorant or a liar

big deal, 49 Mhx cordless can be heard on most scanners

> When questioned about cell freq reception being
illegal, he responded that the manufacturer (Uniden) assumes all legal
responsibility, he only did the modifications??????

I am no technichan, but i doubt this guy did any mods on the radio, you should have
asked some simple questions about how the mod was done, probably could have vetted
him out for the phoney, i believe him to be right there on the phone. as i learned
from bill cheeks faq postings, no radios sold or imported after march of '94 have
cellular or can be modifyied for cellular. as far as the legal end, that dosent
sound right to me.

All in all i think the sportcat is a good radio, especially for newbies, it got me
ito the hobby!!. i just thought you should know who you are dealing with. sounds to
me that this person is either ignorant or a liar

OK, is there something incorrect with the statement I made above?

> Good Bill! Would you like to confess about that warrant for
> the arrest of Bill Cheek with San Diego PD (your resident city)?

Here again, I have NOT accused Bill of any type of wrong doing! I
simply
asked him if he would like to confess to the warrant! I never even
said what the warrant was for!

-

So now it is "tit for tat"! Bill stated that I did prison time (without
giving ANY proof or evidence) so I ASKED if he did prison time!

What's wrong with that?

It will work, it jsut won't work very well. (which is what I
originally said)

You could pound a nail into a piece of wood & use that for an antenna
also, it just won't work very well.

Get it?

Probably! Remeber, I said it won't work well. You could pound
a nail in a 2x4 & use that for an antenna. It would also work
like your previous examples. It just won't work well, like your
previous examples.

Yep, Thats the rf ground. Most AM radio stations use half wave verticals
with 120 halfwave radials. Very efficient for a rf ground/counterpoise.
But they still have a dc ground for lightning protection to the tower
ect. If the radials were connected to ground rods they could do both
jobs. MK

2975. Re: Radio Shack glass mount mobile antenna

Newsgroup: rec.radio.scanner
Date: 1998-07-22 00:00:00 UTC
From: rc <richns96@ix.netcom.com>
Message-ID: <35B6DB49.66D4@ix.netcom.com>
Source record: 151324

I also recently purchased a $30 glass mount from Radio Shack.
Are you talking about the cellular look alike (20-011),
page 57, item 6 of the 98 catalogue?

Mine seems to work "OK", but not sure if it does work better than
"rubby ducky" antenna included with my portable. I still have to
do some tests to find out.

One benefit is that I don't have to worry about keeping my portable
sitting upright when it is connected to an external antenna.

Now for the down side, I'm not happy with this antenna at highway speed.
At 70 mph (or significantly less on windy days),
the antenna makes noise. This is probably do to the
cellular look alike feature, the little curves in the antenna and it's
flexibility.

An intersting point though, is that one day I had unscrewed the antenna
since I didn't plan on using the radio. I later used the radio without
screwing the antenna back in, and it seemed to work somewhat OK for
local broadcasts. I'll have to test that further as well.

I'd be interested to learn how well the no drill glass mount method
works? The thickness of the glass must have some signal loss factor
from black square mount to black square, and I don't quite understand
the
physics? It can't be the same as direct cable when it comes to
signal loss?

I also have a magnetic mount antenna, direct line, but having a nicer
new car, didn't
want to stick that on paint, as I know it would discolor it over time,
but
may try it for comparison purposes sometime.

So like you, I'm not sure what I want to do at this point either. I
wouldn't mind
spending a few dollars on a great mobile antenna, but I need broad band
coverage...
coverage from 39Mhz, right up through 900. I know I won't get great at
anyband,
but a good general antenna that doesn't make noise, doesn't damage the
vehicle in
any way, and isn't too tall, well, all that???
Richard.

3' x 10' trench won't work very well because the idea is to get to damp soil
in order to get a good ground. You can cheat a little by driving the rod at
an angle. The person with the water jett idea is the best.

Overheard on a private newsgroup......

=======

JOHN MACKEY WINS THE GREATER PORTLAND OREGON
SUCKING CHAMPIONSHIP HANDS DOWN!

Mackey walked away smiling from the quarter-finals
after he effortlessly sucked a tennis ball through
a 50-ft 3/4" garden hose.

He gleefully captured the semi-finals when he sucked
the chrome off a trailer hitch. The audience roared
and applauded as he swallowed the chrome!

Mackey proudly claimed the Championship after he
nonchalantly suck-started a Harley Davidson motorcycle
from the exhaust pipe.

Mackey Sucks!

Of course not. I like to laugh. Don't you?

> Did the wife boot you or something?

Nooooo. <grin> But did your's?

> Is the Viagra not working?

Haven't tried it. Why? Doesn't it work for you?

> Are you guys having such tough times that
> you would rather spend so much time and energy
> digging in to the personal life of someone you can't stand?

Well, I can't speak for anyone else, but
I like to laugh. And Mackey is the newsgroup's
laughingstock. Read the recently posted article
about how he won a Sucker Competition.

That'n will paste a smile on your chops.

> You should consider talking to a professional about it.

Already did. The shrink laughed at Mackey, too.

2992. Pro-90 Type I trunktracking

Newsgroup: rec.radio.scanner
Date: 1998-07-22 00:00:00 UTC
From: junior13@inquo.net
Message-ID: <35b623dd.801950@nntp.netcruiser>
Source record: 151385

Just purchased a PRO-90 Trunktracker. Have the freqencies for my
employers trunked system. Programmed them in to track them, but did
not hear any conversation when I could see someone talking on the
radio. (Did get approx. 25 user id's both odd and even numbers, but
did not hear anyone from work)
I think it might be because we use a Type-I (or hybrid) system.

Tried to setup the scanner to track a Type-1 system, but it apears
that the owners manual is missing a step. (Or I am completely blind,
but I am usually pretty intelligent when it comes to technical stuff.)

Has anyone been able to set up their Pro-90 to track Motorola Type-1
(or hybrid) systems, and if so, could you give me some pointers.

thanx
Junior13

Hardly! You kept "things" going. But now
"things" are hilarious and mirthful. All
thanks to YOU, Hermie. You ARE a very funny
little fellow.....

That story about you and the Cowboy was great,
not to mention the ones about you being a
Doctor. I am STILL laughing my ass off....

Ha ha ha ha ha ha ha..... whatthehellsamatter
with you anyway, Hermie, don't you like to
laugh?

> when Bill suddenly, for no reason, started
> flaming me again on this NG. I did nothing to
> provoke him & the stories about me being a
> Doctor or a Cowboy

Provoke? How does President Clinton provoke
all the funny stories told about him? It
doesn't take provocation, Hermie. People
just like to laugh, is all. This time around,
"things" are FUNNY instead of sour and dour.

Besides, I picked those stories up from another
newsgroup where you can't go....and I thought
folks, including YOU, might appreciate hearing
them firsthand.

Wait'll you see the latest one about you that
I picked up....how you WON A SUCKING CONTEST!

Ha ha ha ha ha ho ho ho ho ho ho he hee hee hee

>
>If one was to buy a trunking scanner what would be the best choice?

stick with the BearCat 238 for portable...you
get two batteries and a charger. but you hvae
to go out and buy amplified speakers to hear
it both in your car and in your abode.

i kid u knot....

Grove sells the best of the lot....speakers that
work...good price.

as for base: only one choice: bc 895xlt

ps: bc/uniden makes the radio shack 90 model.

also...be prepared to buy a new antennae for
your 235xlt...it is a bad one....

uniden will replace it as long as
you have your receipt and stuff.

plus you got to get an audio cord that
has mini plugs to fit into the audio
speaker hole....

Radio Shack sells some nice speakers too
for amplified inside house...i have two.

powered by ac or battery...then you have
to buy 12 rechargeable nicads and a charger
from RS....that adds uop

scanner: 200 or so
charger: 15 to 20....for nicads
nicads they run 3.50 each times 8
speakers: house: about 20 each
speakers car: about 20 each.
they come with cords that go into cig ligher...
buy an adaptor: 12 bucks... three into one ..the
cig lighter now works three
cord: 3 bucks
235 uses 4 nicads... then four more in charger
So we have 219 plus 20 plus 30 plus 20 plus 20 plus
3 plus 12 plus 9 (antennae bought...better than uniden's)

lOoks like: 320 per just to get it going....

for the 235....

bill conduit
etc.

WarKang <orkang@yahoo.com> wrote:

> You can use a steel bar covered electroliticaly with copper!

Sure, you can. But those are 5/8" dia and
8-ft long. Using <pi> x <D> to determine the
circumferences of 5/8" rods and 1" pipes:

5/8" rod 1" pipe
======== =======
1.96" 3.14" = circumference

Now <circumference> x <length> equals surface
area of the rod or pipe:

8-ft 5/8" rod 10-ft 1" pipe
============ =======
188.5 sq in 377 sq in = area

So a 1" 10-ft copper pipe offers twice the
surface area for 1/2 to 1/4 the contact
resistance of an 8-ft 5/8" rod.

Ground rods are fine for 60 Hz electrical code
work, but are not all that effective for RF
work.

Excuse the ignorance, but I am new to the scannng hobby and currently only own a handheld (pro-64), but when I move up to a base unit and exterior antenna
I'd like to know (besides lightning protection) how/why grounding to a 10 foot
depth benefits signal reception. I saw one of Bill Cheek's responses which had
to do with performance and RF connectivity, but could I get a little better explanation (in layman's terms)?

Take a piece of pipe (anything will do) about 3' long, screw a cap
on the end, use it as a driver, it is NOT that hard.

When I was in cent. FL. I could push 10'ers. in by hand. You
know how ground rods have a thread on the end ?? That is so
more than one can be driven in.

In cent FL. according to TECO (Tampa Electric CO) a service up to
200 amps ONLY needs 1, 8' rod to the socket, that's it. I always
used 2-8' rods 8' apart.

Thank You.

My, my, my but we've been quite the busy bee, haven't we Mackey? Post after ridiculous post, and all over a couple of harmless jokes told at your expense. I figured that would happen. Yet another case in my ongoing experiment in psychology. Fascinating.

At any rate, it's time to say goodnight Gracie. I'm turning out the lights. But before I do let me clue you in on a little secret. The reason I turned off the filters for a while? To see how well they'd block your drivel. I knew if I got you all riled up, you'd pull your typical crap and post under dozens of variations of your name, email address or both. So this allowed me to test them all. Thanks to you, my filters are now perfect. There is no way you can weasel your way through (as yourself at least)

Furthermore, I have filtered most of your alter egos as well. Sure, you'll create more, but it only takes 3 mouse clicks and they too, fall off the map. So be a sport and knock yourself out. Oh and do let me know when you intend to post something relevant to scanning. I sure wouldn't want to miss it.

So long screwie! PLONK!

Hmmmm..Someone else in the thread stated you only need to dig the
trench 2 1/2 feet, according to the electric code. A typical house
water feed is not much deeper then that and makes a good
ground..albiet the run is probably longer then 10 feet..

>Lotsa little, subtle, but vital factors in
>effective grounding systems.

That's why I'm glad my soil is mostly sand, and we get alot of rain,
saving me from watering my ground rods too often..

Hi there:

I'm looking at buying a scanner, and have things narrowed down to the Uniden BC3000XLT. I'm interested to hear your thoughts and suggestions on this model, pros, cons, alternatives, etc.

I don't currently own a scanner, but when I buy things like this, I like to buy the better quality stuff with lots of features, so I can grow into it instead of having to buy a new one when I want more features.

I like the idea that it has most of the features of the BC9000XLT, but is portable.

Is Uniden going to come out with a newer revised model of the 3000XLT anytime soon, or is this one going to be their higher end portable for the forseeable future?

Thanks in advance.

All you have to do, is turn on your phone, and have your scanner search from 42 to about 47 mhz. Just listen for dial tone coming from your scanner.

Interesting, very interesting! This apparent capability to be easily
modified may have been the reason for Radio Shack to discontinue
the PRO-64 and blow out the ones that were in store stock. There
could have been some pressure from the FCC involved.

Trunking is no more then a computer controlled radio system.
One data channel and a number of voice channels.
Each time a user keys up their radio, the computer assigns one of the
allocated channel's for the transmission.

That's STILL for 60 Hz ground.

If you go take a look at commercial radio
station grounding systems, you'll find
a whole lot that goes above and beyond
the NEC....which does not deal with RF grounds.

Go to any good auto store (Western Auto or something) and ask for polish to restore taillight lenses. You might need to shop for a while in various stores, but this stuff will do the trick.

I meant to say "polarization" in my previous post but
you didn't know the difference anyway.

If you rotate the horizontal boom on a TV antenna so
the elements are perpindicular to the earth instead of
parallel, it is *still* a TV antenna. Maybe a less efficient
one but a TV antenna, nonetheless. How about rabbit
ears, John? What is the polarization of them? Heh, Heh,
Heh! How about you and Bill having a technical discussion
about polarization-diversity antennas? That would be neat.

At a frequency that high a ground plane is not all that important. Talk to any radio tech John since you obviously know nothing about radios or scanners.

It was designed as a TV antenna and is still a TV antenna. It is just not being used to receive TV signals. The polarity has changed but not the design. Turn it back and presto ... It's still a TV antenna ...

Get a life John ...

Never known it to be against the vehicle code to use radar, just the state would not give the CHP money to buy them.

Probably some state senator worried about getting a ticket.

Hi, Ive had a scanner for a year or so, a realistic pro-26, i bought it from the uk and had it shipped, cause nothing in thier model was blocked..

Recently i saw a commercial on e! advertising scanners to listen to cells and cordless (obviously a sting) but anyways it sparked my interest in learning more, so after reading your message, you seem pretty smart, are there any basics that i should know about scanners?

I dont understand what the term trunk is and how its used. Also your comments on the beeping and buzzing interest me. and lately around here, in va theyve been putting up double repeaters, 2 next to each other, and cell conversations

have become increasingly one way. I know each geographical location in the us will have minor diffrences, so any basic info you know would be helpful

Please reply via email if the message is of importance

When I see contractors do this they normally get a posthole digger and dig down as far as they can then drive it from there. This way you can install an access vault so you can periodically inspect the cad weld connection.

3058. Icom PCR-1000 protocol license

Newsgroup: rec.radio.scanner
Date: 1998-07-22 00:00:00 UTC
From: John McDermon <mcdermon@usa.net>
Message-ID: <rUlt1.23408$g8.443984@news.mci2000.com>
Source record: 151451

Is anyone aware of ANY instance where Icom has in fact licensed and provided their command protocols to any third party software vendor to date? They've been talking about this for over 4 months now. I have heard them say various things about their intent to do this, and someone's post a few weeks ago implied that several vendors had signed up. Which ones? How can we tell which are the "approved" third party vendors and which are not? Icom must be planning to endorse the use of their software - because if they still don't, what is the benefit to the vendor of paying their license fee? Is the fact that Icom has links on their web site sufficient "endorsement" of those vendors listed? I think we must accept that it is... Unless Icom wants to shed some light on this issue, perhaps publishing a list of "approved" third party software?

I'm anxious to explore the capabilities of this PCR-1000 using software with a more robust feature set than that shipped by Icom. But I do not wish to invoke the wrath of their tech support people again if/when my EEPROM gets corrupted. Since Icom isn't commenting on the suggestion to provide a user capability to backup and restore the EEPROM contents, what are we to do?

Gary? You listening still? Are we having fun yet? <smile> I'm trying damned hard to stay civil about all this. Would be helpful if Icom would at least enter the dialog.

John McDermon, KE4VAL

Go to a rental outfit and rent a manual post hole driver. Put a connector or 2 on the end of the rod so you don't smash it. The driver will get you down to about 2 feet or so to go and then finish with a sledge hammer very carefully. Or you can start a hole with a post hole digger and dig down about 2 feet so the post hole driver will fit down in to it so you can drive the rod down completly with the driver. Check with a local farmer, he may also have the driver..makes the job real easy and not as messy as using a sledge hammer on the end of the rod and rounding it of!

3060. Pro-90/BC235 Audio Clipping While TrunkTracking?

Newsgroup: rec.radio.scanner
Date: 1998-07-22 00:00:00 UTC
From: dhcook@rev.net
Message-ID: <35b5f684.314088502@news.rev.net>
Source record: 151453

I have a Pro-90 and the technician for the school radio system has a BC-235. We were comparing notes yesterday and we both have problems with the audio dropping out on modulation peaks only when in trunking mode. This only happens with certain dispatchers on our system - their transmitter peak deviation is noticably higher than the mobile units. It also happens most often with female dispatchers who, because of pre-emphasis in the transmitter, cause higher peak deviation than their male counterparts. Has anyone else had this problem? Have Uniden or Radio Shack addressed this?

Trunking is basically a group of channels, but an amazing amount of
users can use this system. It is controlled by a master computer and
each radio has an individual code and group code to it, like perhaps
sgt. Phillips has a certain individual code, but his group code would
be Los Angeles Police Department. In this way people can talk to and
be heard by only those who are involved, and it makes very efficiant
use of the frequencies. The bitch of it is tracking them... if u want
to hear some, scan in the area of 850MHz and above up to say 869MHz.
The computers talk on a control channel and they have nothing but
beeps and buzzes constantly, telling each radio what freq to listen to
and so on. The rest are the channels and u'll hear little data
packets at the start and end of each one as it talks back to the main
computer...

look for pages that explain it, it'll come clear it took me a long
time to understand.

>[snip]

I have used a hammer drill in the hammer setting only. With the
relatively thin copper plating on the ground rod rotating while
hammering will result is removing much more of the copper if the soil
is abrasive. Plus a better ground to rod contact will result without
the rotation.

Not entirely free. It's careware. If you use the program, try to donate something (whatever you feel it's worth; maybe more ;-)) to a worthwhile charity.

Solder a Water hose adapter on the end of a 10' length of copper pipe and
let the energy of the water pressure do all of the work for you... it's
called an Aqua drill.

DITTO! We have a motorola trunking system in Charlotte, NC. I programmed in the freqs given by beyond police call but while limit scanning I found freqs in the 880-881 range that weren't in the book. Also, I know I'm only picking up a fraction of the airtime for this city. Any info will be appreciated.....ceb

> up..

Soils do vary, of course, but a pointy-ended
copper water pipe can be driven even into
rocky soil with a little persistence and
use of the rebar, if needed. Often, it's
not needed as the copper pipe will break
or push small rocks aside, and bend around
larger ones.

When sledgehammering a copper pipe, it
helps to put a solid copper cap over
the driven end and hammer that. The pipe
will "accordion" somewhat as it's driven,
but once in place, the ruined 4" or so
can be cut off.

The nice thing is that copper water pipe
is cheap....as are the fittings and other
necessities. And once in place, it halves
the ground contact resistivity over a
5/8" rod.

Ooooooohhhh, you can't do that! For one,
freshly disturbed soil has a high resistance
and it can take years to re-establish itself.

Secondly, the upper several feet of ground
isn't "True Earth Ground". The deeper, the
better, and definitely deeper than 5-ft just
to connect into the real ground substrate.

Lotsa little, subtle, but vital factors in
effective grounding systems.

> You don;'t have to dig the trench that deep according to the NEC,

Trouble is.....an NEC ground is not by
any stretch of the imagination an RF
ground. "Ground" at 60 Hz is one thing.
"Ground" at 1 MHz and up is totally
different.

Grounding for electrical safety is one
thing, but grounding for performance and
RF connectivity is different.

And since lightning consists of an
extremely wide spectrum of frequencies
from nearly DC to upwards of 100 MHz,
even a lightning ground doesn't relate
to the National Electrical Code.

Caution advised when interpreting the NEC.

NEC requirements are one thing....for 60 Hz
systems and subsystems. But the NEC has
nothing to do with RF grounding and grounding
for radio station needs.

A "trench" does not make any sort of an RF
ground, with singular exception if it's a
part of a "counterpoise", but even then,
that's NOT necessarily a ground. A counterpoise
merely takes the place of a ground for
antenna tuning purposes.

You ever see a rain penetrate 3-feet of soil?
Rarely. But even if it did, the soil's resistivity
won't improve except temporarily. The chemical
makeup of a soil and its density determine the
long term resistivity. And it takes years for
freshly dug soil to return to its natural state
of compaction and chemical balance.

> >Secondly, the upper several feet of ground

> Hmmmm..Someone else in the thread stated you only need to dig the
> trench 2 1/2 feet, according to the electric code.

Yeah, I know, but he's probably an electrician,
trained and experienced in 60 Hz. And while
a grounding system may meet NEC code, that does
not make any implication to its effectiveness
as an RF ground....or even a lightning ground,
for that matter.

> A typical house
> water feed is not much deeper then that and makes a good
> ground..albiet the run is probably longer then 10 feet..

"Effective" at 60 Hz is not "effective" at RF.
Not necessarily, anyway...and not usually, for
that matter. A 90-degree "kink" in a ground

wire with a few microhenries of inductance
offers no obstacle to 60 Hz, but can completely
block RF. Figure it out. Inductive reactance (XL)
is equal to twice <pi> times the frequency
times the inductance (let's assume 1 microhenry):

XL(60 Hz) = (2)(3.14)(60)(.000001)
and 1-uH = .0004 ohms

XL(30 MHz) = (2)(3.14)(30000000)(.000001)
and 1-uH = 188 ohms

We're talking 1 microhenry of inductance, man!
At 300 MHz, XL becomes 1880 ohms, and even at
3 MHz, it's 18.8 ohms. All these examples are
a far cry from the near direct short of .0004 ohms
at 60 Hz.

The principle here, though, is that the resistivity
of untampered soil a few feet down is constant
throughout the seasons and the years, whereas
it is unpredictable and variable in disturbed
soils. But a lot doesn't matter at 60 Hz where
it becomes critical at RF.

Bummer. Sand is a very poor conductor.
All the more reason to go deeper...as
deep as you can...to hit the substrate
where the "ground" really is!

I have used toothpaste (not the Gel type) to polish the display on my cell phone and it worked very well. Use it straight (no water) with a cloth. You can use a bit of water to remove the residue.

> foot depth benefits signal reception. I saw one of Bill Cheek's responses which
> had to do with performance and RF connectivity, but could I get a little better
> explanation (in layman's terms)?

Grounding for performance at VHF and UHF
frequencies is kind of moot and not
generally applicable like it is for HF
and down. A good RF ground is vital for
ELF, VLF, LF, and MF, and fairly important
for HF. It may be a factor at VHF-Lo, but
is not relevant for VHF-Hi and above.

However, there are lightning considerations,
for all antennas, regardless of frequency.

The most fundamental concept is that lightning
takes the path of "least resistance". If
there are several paths, then it takes them all.

Therefore, it makes sense to ground the antenna
via a solid #6 (or larger) copper conductor,
straight to True Earth Ground....which does not
exist in the upper several feet of soil unless
it hasn't been disturbed in many years, and even
then, that's questionable.

So the principle is to get a conductor down
into the lower substrates where resistivity
doesn't change with the seasons and the years.

Keeping that path from antenna to ground with
a total series resistance of less than one ohm
is one of the best potential or static protection
schemes against the effects of lightning.

The impedance of the center conductor of the
antenna port on your radio to the outer ground
shell of the antenna port is roughly 50 ohms.
By grounding the ground portions of the antenna,
you place a low resistance path to ground in
parallel with the impedance of the radio.

So if the resistance of the path to ground is
0.1 ohm and a lightning bolt hits with the
radio connected, 500 times more current will
go down the ground lead than into and through
the radio. It is possible for the radio to
survive a direct hit that way. Mine have.

But if the path to ground is 10 ohms because
of poor soil or a faulty ground installation,
then the radio will pass 1/5 of the current
or enough to blow it to Kingdom Come.

This may not be a newsflash for most of you Clevelanders, but incase you don't know the Skywarn Control channel for Cuyahoga county is 146.760 It was great to listen yesterday as the reports came in from all over the city during the storm. I was happy to find that there is even a Skywarn guy here in Solon who was up giving reports.

For Sale:

Radio Shack PRO-60 handheld scanner with leather case and wall charger:
$165.00 shipping to lower 48 by UPS included

SPECIFICATIONS:
---
o Continuous coverage from 30 to 512 MHz
o Receives 800 MHz public service, police,fire band
o No cellular and not cellular modifiable
o 200 channels (10 banks of 20 channels)
o Hyperscan scans channels at 25 channels per second
o 50 frequency per second direct and limit search
o 10 independent monitor memories to store frequencies found is search mode
o selectable NFM/WFM/AM modes
o requires 6 AA or nicad batteries

This scanner is in excellent cosmetic and operational condition.
It also includes the original box and instruction book, along with optional
accessories:
1) Leather zipper-closed case
2) 9 volt wall charger (for nicads). The charger can be used to power scanner also.

Contact sparkes@fast.net if interested.
Thank you,
Ned Parkes - N3LKT

I generally use a electric hammer drill to set a ground rod. Some manufacturers make an adapter for their drills for this purpose. Kind of a metal cup with a drill shank on it. Set drill to hammer only mode, and lean on the top of the rod. Drives a 10' long 5/8" rod in 30 seconds or so! If the rod hits a rock, continued pressure will drive the rod right through it!

What is this? Some kind of veiled threat ? You are beginning to walk on dangerously thin ice, jerkoff. Let's just say you DON'T want to take this to the next level with me. I only play nice for so long.

Why don't we discuss this via private email. I turned off the spam filter so your messages will get thru. Send me a note if you've got the stones.

By the way, if you wanted to push my button, congratulations, you just found it. Oh wait, you wouldn't know anything about our last phone conversation now would you?

I'll advise you anyway. All calls to my work phone are logged and recorded for security purposes. If you call me again, it will be very easy to prove that you called and when. So I really wouldn't push your luck.

After all, I have your number too.

No longer smiling,
-Phil

I've heard allegations from as yet not to be confirmed sources that John has several citations for "indecent behavior" in a public restroom. But this is merely rumour and we have no basis to confirm this unless evidence presents itself.

So you're OK in my book John. (get your hands outta your pants.)

Check out the new hanheld Alinco scanner. It's the DJ-X10T, has 1200 channels, goes from 0.1 to 2,000Mhz,(except 800 cellular by law) lighted keys, all mode, each channel can be alpha-numeric (labeled) it comes with a drop-in charger & rcgbl batt pack, and has a signal strength meter. (IT's also Windows programmable as well w/optional software & cable!) Advanced Specialties in NJ. (201-843-2067) has them for around $400, and its sold thru most other Alinco dealers. Good luck!!

The key here is "lots of wire". What he was talking about was a six foot ground rod laying in a trench an that won't be much of a counterpoise on the HF bands.

>Any ideas?

Get some Novus, Meguars, or Blue Magic plastic polish. They all are marked as being able to polish out fine scratches.

Failing that, the "fine cut" paint polishes sold in auto stores, for removing swirl marks and fine scratches on clear coat finishes will be a good substitute.

Finally, any fine metal polish (as sold for polishing soft metals like aluminum mag wheels) - Blue Magic, Meguiars, Mother's, Eagle One, Flitz, Happich Simichrome, etc - will do the job.

Be careful about recommendations for using toothpaste or more coarse abrasives like Brasso and Noxon. These may take out the scratches but leave the surface less than optically clear, as they tend to use harder and more coarse abrasive particles.

To do this with your scanner, the best way would probably be to buy or
make a frequency converter. The freq conv for this application would
mix all signals with a 400Mhz oscillation. It would drop the incoming
signals down 400Mhz and would allow you to pick up signals from
830-900MHz in the 430-500MHz ranges. GRE used to make a very good freq
conv but is no longer able to be sold. Ramsey has some kits or you can
piece together a decent one from parts from Mini-Circuits.

An image is when you can monitor a transmission at aprox. 21 MHz. above
the actual frequency. A "Cellular Image" is a way to monitor the
blocked Cell Freqs. on some scanners by tuning the image freqs. in the
900 Mhz area. Some scanners ar more apt to bick up images then others.

Yeah, Toilet Boy is the saddest. In his case, even though he has a right to be stupid; he does abuse the privilege. It's hard to believe that he beat out 1,000,000 other sperm.

> Dr. Smacksie is quite the comic, actually.
> I'd like to stick HIM and Andrew Dice Clay
> or Eddie Murphy together for a while....

Toilet Boy doesn't rank high enough to be called amateur against these two guys. The Dice Man would shred him so bad, there would hardly be enough left over for a tooth pick.

BTW Bill, in response to that question you asked me last week, yes, please include me in the games. (Not sure if my earlier responses made it through.)

I really like my BC3000xlt. I have incorporated the PROgramit
interface for programming all of the channels into it. Right now there
does need to have a bit of software changes for it to work fantastic
on this model due to the delay between when the ENTER button is
pressed in the programming sequence and when the channel is actually
entered, but later updates in the software will fix this. It is a
nice, fast scanner. I just wish that it was a bit easier to hold like
that of a BC220xlt or 235xlt. It has the wide body similar to a
200xlt.

You can polish some small scratches out with toothpaste (not the jel
type) or you can also use car wax. Just take your time and a soft rag.
Don't get too carried away and get it all over the place.

>Thanks in advance!

Good quality TV coax will run rings around typical RG-58 on any frequency above 50 Mc. RG6 is best by far of the TV cables (buy Belden, cheap coax isn't worth the numbers printed on the jacket, no matter what those numbers are) and it will make a noticable difference in signal strength on high and UHF frequencies. It is also 100% shielded, so there is less noise pickup.
There is a theoretical mismatch between 75 ohm cables and what they say is a 50 ohm input on scanners, but I don't see the front ends of many scanners presenting an accurate and flat impedance across the entire frequency range, so it's largely academic. The built-in antenna they parallel on the same input certainly doesn't present 50 ohms impedance at more than one frequency! Scanner manufacturers have used connectors that were 75 ohms in scanners and about half the scanner antenna manufacturers have used or do use 75 ohm fittings.
An interesting thing to note: The loss in an "F" connector at 1000 mhz is much lower than the loss in the best teflon "UHF" connector at the same frequency and the same or slightly lower than a "BNC". Therefore, even RG-213 can end up with more loss than good RG-6 with a couple of connectors and an extra adapter in the line....

I use a discone for overall scanning because of the wide frequency range but had to replace the hollow radials of the RS discone with solid stainless steel ones because they broke off in the wind and ice. If you want to get just good reception on the 800 band I would go with a gain 800 antenna. Maybe RS has one fit for mounting on a pole. Remember its line of site at these frequencies and the higher the better.

Hi all...

I need to drive a 10' grounding rod into the soil, and haven't a clue how to go about it, other than to wet the soil first. I tend to think this will be a very difficult thing to do in any case.

The only thing I can think of is to saturate the ground as much as possible (which won't make much of a dent anyway), and then get up on a ladder and start pounding away with a hammer.

There MUST be an easier way!!!! (isn't there??? :(..) I'm in upstate NY with lots of clay-ish soil. Let alone any rocks I may hit along the way. Argh!!

Help!!!!

Thanks.

3148. Cellular Mod for PRO-64 !

Newsgroup: rec.radio.scanner
Date: 1998-07-22 00:00:00 UTC
From: cdeviney@ipa.net
Message-ID: <35b55e1c.3901631@news2.ipa.net>
Source record: 151541

A fellow PRO-64 user has discovered a cellular mod for the PRO-64 and has graciously given me permission to post the information, just FYI, for educational purposes. I am not the one who discovered this mod...I do not have the knowledge, technical expertise/experience or insight that are required to perform such a feat! The donor wishes to remain anonymous. He may be able to provide some pictures at some time in the future, that I could attach to email for anyone interested.

I guess anytime that someone says "it can't be done" or the government tells you "you can't do that"...it gets those creative juices flowing for the innovative and the inspired!

There are two mods which follow, "temporary" and "switchable". I have tried the temporary and it DOES work. Please note, you can EITHER have cellular or the 800 band, but not both at once.

==========
Quotes from the modification donor follow:
==========

Note: The disadvantage of this mod is that it will pick up only the output frequencies of the CELL "A" (non-wireline) service, due to the limitations of this scanner.

TEMPORARY MOD:

Disassemble the PRO-64, and look at the circuit board on the BACK of the unit. You will see a multi-pin connector(CN101). It has 7 pins, with colors BRN(1), Red, Orange,Yellow,Black,Blue and Violet(7). Pull the connector out from its socket.

Use a small screwdriver or needle to release the RED and BLACK pins from their socket, and interchange them (place the red pin where the black pin was, and vica versa).

Place the 7 pin plug back into its socket. Reassemble the unit.

Scan between 48 and 54 Mhz. (I also found some at 29-30.)

You can calculate the actual cell frequency as follows (using the 48-54 MHz segment):

Actual cell frequency=772.5 + (2 X [Display frequency])

To return the scanner to normal operation, you must reverse the above procedure.

SWITCHABLE MOD:

The switch is a submini DPDT switch. I was able to install it just below and to the right of "MAX" of the squelch control. I removed the upper screw from the rear circuit board, drilled a hole in the case, and mounted the switch. It JUST fits!

As to the wiring:

Here are the terminals of the DPDT switch.

1 2 3
4 5 6

1) connect 1&6 together
2) connect 3&4 together
3) cut the RED and BLACK wires going to the connector we discussed earlier.
4) connect the RED wire of the connector to 2
5) connect the BLACK wire of the connector to 5
6) connect the other RED wire (from the lower circuit board) to 1
7) connect the other BLACK wire (from the lower circuit board) to 4

As you can see, placing the switch in one of the positions electrically connects RED to RED and BLACK to BLACK. Placing the switch in the other position connects RED to BLACK and BLACK to RED.

THE END

> There MUST be an easier way!!!! (isn't there??? :(..) I'm in upstate NY with
> lots of clay-ish soil. Let alone any rocks I may hit along the way. Argh!!

Rocks are bad news, but clay makes a great
conductive ground, so it's worth a try.

For rocky soil, use a steel bar, sharpened
at one end, and a sledgehammer to drive it
in a few inches and then wiggle it and pull
it out to keep it from being permanently
embedded. Do it until the hole is 10-ft deep.

That's worst case. You can usually get by
with a 10-ft copper water pipe, 1" dia, with
1/8" holes drilled down the sides about 6"
apart. On the ground end, solder on a 1" to
3/4" reducer, followed by a couple inches of
3/4" pipe; and then a 1/2" reducer with a couple
inches of 1/2" pipe. Neck it down to a point
and heavily solder it.

Then start driving with a sledgehammer, filling
the pipe with water as you go. 1" copper pipe
makes for a much better ground rod than a standard
5/8" solid copper rod. Use <pi><D> to calculate
the circular mils difference.

That's the general approach anyway.

Recently Mackey took a tour of the
Old West up near Cody, Wyoming. He
prances his pony up a rise toward a
solitary tree, ringed by a dozen
gruff cowboys watching a man being
hung from a limb.

Mackey dismounts on tippy-toes, knees bent,
sachets over to the nearest cowpoke and
in a lispy, soprano voice, says: "Thay,
big guy, whath up and whatha you fellath
doin thwinging that guy on a rope?"

The cowpoke turns to Mackey, spits a gnarly
cud of tobacco juice betwixt Mackey's pink
lizard skin boots and drawls, "Wellllll,
sonny, we're hanging us a pervert."

Mackey rebounds up straight, rocks back on
his heels, puffs out his sallow chest, and
in a deep, booming bass voice, bellows out,

"Say, NO SHIT?"

OOOoohhhh..you smell like flowers....haha seriously.. You could dig a
3 foot deep by 10 foot long trench and bury it for the same effect.

I've had great results with regular copper pipe for ground rods by
cutting a 45 on one end to make it pointy, then soldering a hose bib
to the other end and attaching a garden hose to it and climbing up on
the ladder, turning on the hose bib and running it straight down with
no problems. The soil here is mostly sand, but I'm sure it would for
you. You could even start with that for five or six feet, then pull it
out and pound your solid rod in the rest the way. Good luck!

Very little! Especially with the frequency range most of us monitor. RG/6 will outperform RG-58 in every scanner application over 50mhz and probably under that also. The RG-58 does make awesome shielded audio cable though.

> BTW, I have >used CATV coax on many antennas in the past with good results. The nice >thing is that most cable repairmen will give small amounts of cable and >sometimes even what's left on a spool if you tell them what you want it >for, and assure them you're not trying to hook up to their system!

Tell the cable man to keep his junk, Home Depot has RG/6 quad shield for 22 cents a foot, If you don't want to spring for the 45 cent per foot beldin RG/8..or 60 cents for my new favorite LMR-400!

Source record: 151565

This could be a b ig problem for us kids. The last thing we need is a commercial touting a scanners ability to pick up cordless phone converstations. Altough we all know this is possible, it's this kind of promoting of what a scanner can "illegally" do that forced all U.S. scanner manufacturers to eliminate a portion of the 800Mhz frequency band. This is the kind of thing that's going to force the issue for an elimination of the 43-49Mhz band. Beware: It's probably going to get worse before it gets better.

Happy Scanning!!!

Here is a list of programs that you can use to upload frequencies to your Pro-64. Most of them include the instructions for the very easy to build interface.

That would confirm my guess that there's at least a resistor between
the earpiece jack and ground. However, I'd rather not put too much
power through the earpiecs (got to save what little hearing I have
left).

Any idea which of the two SMT component is the resistor ? The one
marked "8R2" or the one marked "OUT".

Thanks again.

>

I use one for a different reason - I NEEDED a low gain antenna. My BC895 is tons of fun mobile, but the damn thing is so sensitive that a high gain mag mount or similar antenna overloads the scanner when I'm in urban areas. By using the glass mount I was able to lose the garbage, while still pulling in decent signals on the freq's I like to listen to. An antenna switch completes the setup, so I can pop over to the high gain antenna if signal quality degrades. (I know, that's just sick, huh? What can I say, I'm lazy..)

I bought one of those things too and it was a piece of junk. I couldn't notice any real improvment over the stockrubber ducky. I used a razor blade to take it off and it was pretty easy to get off.

>bigdiq @ hotmail . com
>
>Thanks!!!!!!!!!!!!

I have seen a few little gizmos like that you have described. I
haven't tried one, but I see one offered in Nuts & Volts magazine.
This is what the ad describes:

The ALC245M Automatic Volume Controller will keep your transceiver or
scanner's volume constant from a whisper to a scream. $22.95 S&H $5.
Other models also available. FREE BROCHURE. C&S Electronics, P.O. Box
2142, Norwalk, CT 06852-2142. Phone: 203-866-3208 Fax: 203-854-5036.
E-mail: CANDSELECT@worldnet.att.net

Don't know whether it works well or not...but they consistantly are
advertising it so it seems to be worth their while and money to
continue to advertise it.

Phil, being a brand new BC895xlt owner, I would be very interested in
hearing what PC895 will do, how much it will cost to register, planned
features, ect.
Will this be a Win95, Win31 or DOS package? I am planning to run it
on an old 486 laptop that has Win31 on it (no, I can't upgrade it to run
Win95- it only has 12mb RAM and can't be further expanded).
73s and thanx....Mike ka3jjz@erols.com

I Guess this fine and other restrictions don;t apply when your recording the speaker of the house Newt's cell phone conversations. A couple in Florida did it and I never heard anything about them getting into trouble, in fact I just heard they were passing a new law to give out penaltys for doing this.

Ryan Faricy must be right about anything he says, Even though I was told different I don't have any written proof of it and he does have somthing. I remove my message.

Even further, if you are worried about residue on glass and how
to safely remove it, then I would suggest using some liquid
dishwashing soap, and a razor blade. The liquid soap will help avoid
scratches on the glass surface and make your job much easier. This is
a time honored method for removing paint mist, etc. The dishwashing
soap
really helps.

Hoping someone can help on this one...

I got an Salora with the old "olt" frequenceyes.
But the problem is that I lost the number to radio,
and I need the number to open the radio to receive
the signals from tx (ex. tx 159.1500 rx 167.150)
Is there any way to find this number,
or are there other ways to solve this problem??

Regards,
Frank.

You can buy it for an absurd price from some of the BC895 software vendors ($20 and up) or you can make one (about $5). I made mine using stuff I had lying around the house. For instructions on making a cable, go to www.interplaza.com/bensware or do a search.

Would it not be easier just get a new panel? The one we are talking
about is the one on the outside of the scanner used to protect the
display itself? If it is a radio shack one it should be cheap enough
I got one for my Pro-46 here in Canada for a couple bucks.

I've seen bear hunters using tracking collars but disremember what
receivers they were using. When I run into one of my hunter buddies
I'll ask.

We use commercially available animal tracking units at work.
They are manufactured by "Wildlife Materials, Inc.". The
transmitter consists of two button batteries and a Tx circuit
about the size of another button battery. The entire package
is epoxy coated and has an 8 1/2" antenna. The animals are
caught, weighed, measured, tagged, and the Tx is surgically
installed. After a few days (when the animal has stabilized),
it is released back into the area where it was caught. It
can then be tracked using a directional antenna with the
receiver (which is about 6"x4"x4"). At the moment, we are
tracking Indigo snakes (endangered species).

It would be very easy to install the Tx into a dog's collar
and track it. I'm not sure how much these cost.

Radio Shack does this with all their products. As the new models arrive, they drop the prices of the current equipment drastically. There are no cell mods for the PRO-90 and it is still one of the hottest new radios on the market, yet R.S. just dropped the price to $199.00. That's $100 cheaper than a month ago. Must be something new arriving soon...

They usta allow using the water pipe, but somebody along the way decided to start using Plastic pipes and such, so they decided to do away with that. Many places allow plastic lines coming in up to the breach. Plastic lines are also often used for repairing old copper lines which end up subverting the ground. My parent's home built in the 50's grounded the old 30 amp system to the water pipe. When it sold last year and the service needed to be upgraded, the electrician had to install a grounding rod ... no easy feat since the entire area where the entry is has 6 foot wide by 6 in thick concrete walk, butting up to the foundation. He had to run that ground line way back to the other side of the house before coming to a place where he could drive in the rod.

$150 for BC235XLT? I bought a Pro-90 a couple of weeks ago for $199
through Radio Shack. At the time it was $25-$50 cheaper than the
BC235XLT (same thing but has extra battery). Is this a new or
used scanner for this price?

I really like this scanner. Plan on replacing the antenna. The
extra battery may be useful for some but a single battery lasts
for more than 8 hrs!

Got it on www.uniden.com from their online store.

They may be new (broken packaging), repacked, returned. 30-day money back guarantee, 1 year parts and labor warranty. Guaranteed to be top notch to specs.

Comes with:
two batteries
charger
ac power supply
headphone/earphone

and all the usual.

List price was $499 but I have seen them for $250 refurb. Lots of other good deals. Go see.

Hi,

I used a "Electric Hammer" to drive 3 seperate 10' long rebars into the Georga clay for part of my amateur radio station ground.

It work great using a step ladder and going down the ladder as the hammer pounded the rod into the ground.

Regards..

Did you know that you must mount the base at least one inch away from the body (metal part) of your car? Window tint will hamper performance. I don't believe RadioShack makes any claims that it is better than a rubber ducky. However, since you are placing the antenna outside the RF shielding body of your vehicle there should be some improvement. Especially the reduction of "picket fencing," the chopping sound that can be heard on weaker stations when mobile.

From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <6p7ol0$rcv@news.or.intel.com>
Source record: 151253

Okay, I've been out of the scanning scene for a while (too busy riding dirt bikes), but I've been eyeing the BC895XLT from a distance for a while now (something to compliment the BC9000, R7000, 2005, and AR3000 - what can I say, I like base scanners.) I really want something that does Trunking and CTCSS (not to mention computer control).

Anyway, I was searching the web yesterday and ran across two different sites that were selling the 895 for about $212 (shipping included). I was so blown away by the price that I ordered one without even thinking. That is a great price for a base scanner with a great front-end.

Anyway, I just wanted to let people know about these deals, and also ask if $212 is the best price around.

I'm not affiliated in any way with either of these companies.

http://www.usascan.com/ $199.95 + $18 shipping
http://www.national-electronics.com/ $212 (shipping included)

Eric,
Glass mount antennas are a compramise at best. It's worth depends on the frequencies you want to hear (it's going to be real spotty, but generally the lower you go the worse it is) AND how hard it is to get your Rubber Duck into a window and vertical.
To get it off, there is a special chemical that will release the glue without damaging the antenna or the window. If you destroy the appearance or reuseability of the antenna you might have trouble taking it back.
I don't know if they still have it, but they used to have a mount that slipped over the window and put the stock rubber duck outside: It has a window bracket with a BNC connector and a cable that comes into the car. It isn't for every window design.

Yes, it's a good deal. The two companies you cited have had competitive pricing on the Uniden TTs for a while but they try to make up for the low price by stiffing you on the shipping. BTW, Uniden recently dropped the price on their two TTs by $30 or so apiece, so you'll probably find other companies offering similar pricing (at least after you factor in shipping).

Hello

AirNav, the Aircraft Tracking Software, has now a completely
renewed Homepage.
Using the most recent HTML concept, it's now much easier to get in
touch with the program. The homepage doesn't use frames, JAVA or
background images (faster download) and the main objective is its
user-friendliness.
It's also possible to follow a suggested Homepage Tour.

Just go to:

http://fly.to/airnav

and get in touch with it.

It's possible, via the homepage to:
o Read detailed program information/system requirements
o See Screen Shots made with Real World Navigation
o Download latest program version from more than 94 ftp's
o Download AirNav maps and translated Help files
o Register the program Online and receive your Registration Codes
within 12 hours

So I really hope you enjoy the new homepage and don't forget: if
you have any possible question or suggestion just email me.

Best regards, Andre Brandao

My posts are also mainly on-topic, and only a few *in the past* have
contained misinformation. The information I presented here is *all
completely true* (at least in the state of Minnesota, but positively most
other states, also).

Depends on the RG-8 and the connectors used. The stuff Radio Shack sells
isn't even 90% shielded - while it is better than RG-58, that's not saying
much. If it is purchased with connectors on, they are barely adequit for CB
use. RG-8, especially cheap stuff, doesn't like to be flexed and will break the
shield quickly in an installation with a rotor. I learned these things the hard
way.
Mini-8 is awfully pricey for what you gain, but it is good for
applications where there is a "UHF" connector on both ends already.
IF the antenna has an "F" connector (as MANY do nowadays), you'll lose
something in an adapter from a "UHF" to an "F", right at the worst possible
spot!. At the bottom end, you lose more in a "UHF" to BNC adapter (assuming you
have a modern scanner). My tests show a typical "F" to BNC adapter to be less
loss at 900 MHZ than a "UHF" to BNC.
"Motorola" connectors are 75 ohm and scanner manufacturers used them for
years until BNCs became common.There is no way either a scanner or a scanner
antenna presents anything LIKE a flat 50 ohm impedance from 29-1000 mhz.
Certainly if any splices must be made, "F" connectors are much superior to
"UHF". When RG-8 size cable (ususally RG-213 where loss is a consideration) is
used for anything critical, "N" connectors are used because "UHF" connectors
are too lossy.
Rg-8 and "UHF" connectors were designed when "UHF" and "Radar" were
defined as the area around 200-400 MHZ.....Both have been improved, but "F"
connectors and TV cable were designed with UHF in mind, at a time when signal
levels on UHF TV were critical (the tuners were really noisy and insensitive).
RG-6 was developed to further improve things.
The chances of getting good connectors and getting them installed properly
is much greater with "F" connectors on RG-6 than it is with RG-8, for the
average person.
I don't know what Cable TV is using these days. They may have learned

their lesson and be buying the good stuff now, but all I used to get was some really awful Rg-59 from "cable guys". Satellite installers ususally should have the "good stuff" to prevent problems, but only if they are on the ball. Cable that is rated for burial resists all weather and trauma better. So it isn't a clear cut thing. I wouldn't replace good RG-8 just to be doing it, but for a new installation or to replace aged cable, I think RG-6 is superior for scanner reception, unless you go all the way to "n" connectors and RG-213 throughout. Heck, if you have money to burn, buy some Heliax!

"Ignorance of the law" does not come in anywhere, so you must be babbling.

I shouldn't have said the defendant WILL be found innocent, rather I
should've said the he COULD be found innocent if the cordless phone
conversation is the only evidence in the case.

Enforced or not, the action of listening to cordless phones (let alone
listening to scrambled cordless phones, and taping it) IS illegal.

To outline it for you, it is illegal to:
- listen to cordless phones
- listen to cellular phones
- listen to ANY encrypted, scrambled, or inverted signals
- listen to pager transmissions
- listen to remote broadcast relays
- among many other things

The problem with the antennas is that the center pin will sometimes break off and stay in the BNC connector on the scanner, giving you a 1/16 inch antenna - not very useful. Any communications or ham shop can sell you a good replacement, with better gain and reception than the original. For the best results, I'd go to a comm shop and get one specifically cut for the 800 MHz band, to use in trunked mode.

Message-ID: <35B7856F.D2471288@interflux.dyn.ml.org>
Source record: 151274

I have a PRO-60 scanner, and it is in nearly mint condition. It's been well taken care of, no scratches or anything. For those who don't know, the PRO-60 is a triple conversion scanner(this means no cell phone images...), it has 10 banks of 20 memories each, for a total of 200 memories, plus 10 temporaries. It has 3 user-selectable operating modes, AM, FM, and WideFM(for 88-108mhz).
It covers 30.00-512.00MHZ continuous, and 760.00-999.9875MHZ, excluding cellular, of course.
In addition to the PRO-60 scanner itself, I am also including 6 AA NiCads, an AC adapter, and a DC car adapter. It still has the manual, although you could probably figure this scanner out without a manual!
I'm willing to sell it for $175 or best offer, not including shipping.

Please direct any inquiries via e-mail.

Thanks!
Andrew Tipton

well, one day you will disconnect it
to clean it or just because...

or you bump it against a rock or
someone else's body or a
door coming shut

or//// you get it

then the antennae don't work...the
unit will not track. Signalling you]
antennae is bad

so you twist it off and wallah.
you got a little piece of
metal still stuck in the
unit...in the connector...

it's come apart from the
antennae....you can put
it back, but once it is
apart, it never works right
again....

that's what happens

bill conduit
etc.

Talk about service! I received my BC235XLT just a few minutes ago. That's 24 hours from the time I placed the order (sent via FedEx Overnight). I didn't expect it until Friday because I placed it late in the day.

The whole package was really clean except for a price tag that was removed. The radio is spotless, the accessories, books, packing materials are all clean and fresh.

Radio works well so far. I can't detect a problem with the antenna as of yet.

Lots of features but is missing multiple priority channels. Gosh, you'd think with all the other extras that that would be one of them.

Karl

NEC doesn't just cover 60 HZ. NEC is a minimum safety standard that covers all frequencies, including RF and DC. If better grounding is required for performance, it still must meet NEC. 810-15, 810-21, 810-58 deal specifically with grounding of radio and TV equipment and antennas. Code applies whether equipment is powered by AC, batteries, or off the RF it receives.

Go back and read the NEC. Rod must be "driven" (not jetted). If a rock
bottom is encountered, then it may be buried in a 2.5' trench.

Whaa..? My PRO 2026 is not a wide mode receiver and I pick up cell calls just dandy - same with my 230 XLT tuned to the image freq's. Cellular is NFM, just like the VHF and UHF ranges in his old scanner.The convertor will work, but they can't *legally* be sold anymore, so he'll have to find one used someplace..

That *is* one of them. You should have one priority channel on each bank. If not, maybe that's why it was returned...No biggie, unless that is important to you. Then again, missing priority channels might mean deeper problems internally. I'd check into it.

3264. How to Survive This NewsGroup...and enjoy it minus the negatives

Newsgroup: rec.radio.scanner
Date: 1998-07-23 00:00:00 UTC
From: myway@ix.netcom.com
Message-ID: <6p83te$vu@dfw-ixnews5.ix.netcom.com>
Source record: 151287

All this verbiage bout certain people
who have nothing to say about scanning
from those that do.

One can fight it and rant and cuss and
swear and sweat in their pants, but that
is non-working kharma

I've just allowed the postings to be as
they are: there is this split within the
NG...there is "THEM" and there is "US"

Them being the M-Guy and the C-guy in
a rut. Accepted. It lives. It is. IT
cannot be eradicated by no amount of
reason or great wisdom or psychological
treatsies or threats or pleadings or
crying or plain going nuts.

Then there is the US people.

Two distinct groups using this NG.

If you can accept that and allow this idea
to be accepted there is no more reason to
get mad over what is really an issue of the
other group.

IT's easy to decipher. Plain and easy reading
as to the addresses indicating THEM and US.

Don't allow THEM to upset you.
Remember that they are important to them. Not
US. Simple.

Two groups are vying for attention. So allow
it to occur. No need for comments. At least
directed at them. No need to get aggravated
over what does not concern US.

Allow THEM their say and don't read them.

Just allow your eyes to spot US postings
and then enjoy what you came here for. No
need to plead or cry or ? You just allow it
its space and enjoy the contributions of the
people who come to read about US.

Those that enjoy THEM will do just that.

People: you have a choice. You choose your own aggravation when you complain. So quit complaining and enjoy US. Leave THEM to the people who enjoy THEM, not US.

You cannot please everyone all the time.

Accept it and enjoy US. Let THEM alone. IT's their NG too.

bill conduit
etc.

Something to try - I have the 895XLT, but the 235 oughta do it too:

Connect it to a high gain mag mount (+5DB at least) and search 39-45 Mhz. I get close cell calls in there sometimes. Anyone else get 'em too?

My father in law just bought a Metroscan. From the first glance I took at it, it seems to really blow the Police Call book away. It contains much more than just frequencies - maps, codes, designations, callsigns, you name it. There is also a lot of data that Police Call doesn't seem to have. It also is laid out a little more logically then Police Call.

Price is about $20 bucks. I might get one (hee hee, just what I need, ANOTHER frequency book! I think I have them all, except that one)

Nope - you twisted things yet once again. I said that BOTH the parties
could/would be punished (and yes, only if caught).

I only said that if a person who listened to a cordless phone and used that,
and only that, as evidence against someone else, the other party (defendant)
would be dismissed. The plaintiff with the dirty evidence would be the one
held responsible.

Prove it.

The ONLY thing I have been wrong about (to which admitted I was wrong) in this group was about some cellular system information (how it works).

Otherwise, regarding frequencies, cabling, books, and scanners, I've been "right".

You have nothing else to do but harp on others' mistakes.

Then why do I admit I am wrong when I am? Take a look in DejaNews, search
for "cellular" and "ryan faricy", and you'll find a thread in which I
admitted I was wrong.

yes i have seem them. my neighbor uses them on his hunting dogs.
he has i think a 6 channel radio (not a scanner) that he can
manually change channels for different dogs.

it is like you said radio with a little beam. the transmitter is
located on the dogs collar and has a little insert to turn the
transmitter off when not needed.

i guess that the answer is that, yes is a commercial product, but not
sure how widely availible it is. if you need, i can get the info of
were he purchased it. i do know that it was not cheap.

When your done with whatever method
you use then treat the lens with some
Rain-X. This evens takes out some
light swirls. It also acts like a anti-static
coating, in my experience. As with
most cleaners etc, test on the surface
to be used. I have it on my digital
watch, TV screen, computer monitor and
all of my scanner lenses. Most auto-supply
stores in my area plus K-Mart carry it.
Hope you find this useful.

It was just a cool looking device, was hoping for a url too look at
them. After seeing it, I started thinking about adding a s-meter to my
pro-43 and merging it with an 800mhz beam, maybe even re engineering
my 900mhz baby monitor into a collar for my cat...I'll bet the looks
from cellular users alone would make it worth it...haha

According to a booklet from a company that designs and builds Grounding
Systems for the power industry, in most parts of the country (unless you
live in a swamp, that is) you need to get down AT LEAST five feet before
you have an effective Ground. On that basis, a 2.5 or 3-foot trench will
NOT do the trick!

Some assembly required.
Batteries not included.
Void where prohibited.

You can perform the Virtual Downconversion mod on this scanner, but
due to it being a dual conversion scanner, it would best be to leave
it alone and just listen to the images. You will be able to hear just
about the same and you won't have to even open the scanner up.

- To lessen the whisling/singing noise try a piece of heat shrink tubing over the coil!
- My new 2meter glass mount recomends removal with a thin putty knife, then some mineral spirits on a soft rag to remove the residue. I like the idea of the dish soap. If you would like some technical background on the thru-the-glass idea look up Antenna Specialists on the web. They have an excelent article on the subject. Basically the plates on either side of the glass act as a capacitor with characterists that must be factored into the manufacturing and design equation.

Hope this helps,
JungleJim the antenna fanatic

Same here, It was great listening to all of the radio traffic during the storm. Be sure to give a listen to 52.58 also, this is the 6 meter frequency which each county skywarn relays their reports to Cleveland National Weather Service. I also heard plenty of FD tone-outs regarding tornado and thunderstorm warnings. CECOMS (Cuyahoga Emergency Communications) also announces warnings to Fire Departments and Hospitals on 154.28 along with 154.935 and on their Primary frequency 424.375. I also heard some traffic on the State EMA frequency, 155.805, where I have rarely heard much. If you have a trunked scanner, give the CEI system a listen, you're sure to hear them running around trying to string all their wires back together.

That could be, but I have never seen a cell mod for the 64 posted anywhere...has anyone else?

Or does RS just get rid of model after about a year or so? What is their history of keeping the same model year after year?

Anyway, it's a heck of a deal for $99.97!

CATHY

I'm surprised that nobody has mentioned the way we do it here in this part of Alberta. One guy pumps the rod up and down in the hole while another keeps filling it with water from a can or a hose. You can push 10 feet into the ground easily with this method if you have the right kind of soil. The hole must be kept full of water as you pump the rod up and down.

Someone else mentioned the other method using a hollow pipe. Just fix a hose on the top end and pump the pipe into the ground. Messy but effective. You can do this first and then put a solid rod in the same hole, if necessary. 60 Hz contact is really good as the soil settles back around the rod as the water soaks away.

I bought the 3000XLT in early april for the Blue Angels air show at
MCAS Beaufort, SC. It worked great! I have no comlaints about this
scanner at all, save for one - dual VFO's would be great. Other than
that, I highly recommend it.

Big Bad Berticus sends...

He probably canceled it. And he sure
won't repost it for you, so I will:

==========

Recently Mackey took a tour of the
Old West up near Cody, Wyoming. He
prances his pony up a rise toward a
solitary tree, ringed by a dozen
gruff cowboys watching a man being
hung from a limb.

Mackey dismounts on tippy-toes, knees bent,
sachets over to the nearest cowpoke and
in a lispy, soprano voice, says: "Thay,
big guy, whath up and whatha you fellath
doin thwinging that guy on a rope?"

The cowpoke turns to Mackey, spits a gnarly
cud of tobacco juice betwixt Mackey's pink
lizard skin boots and drawls, "Wellllll,
sonny, we're hanging us a pervert."

Mackey rebounds up straight, rocks back on
his heels, puffs out his sallow chest, and
in a deep, booming bass voice, bellows out,

"Say, NO SHIT?"

Counterpoise, yes. What you didn't notice was
the actual grounding system.

In many areas of the country, the soil is
so poor that good RF grounds aren't feasible,
so counterpoises are used....much the same
thing as a "ground plane", if you will.

But that doesn't satisfy the need for
lightning protection, so a regular ground
system is also installed....but you really
don't notice that unless you're looking
and know what to look for.

Overheard on a private newsgroup......

=========

A nun gets on a bus and sits behind the driver.
She tells the bus driver she needs someone
to talk to.

She lives in a convent and wants to experience
sex before she dies. The bus driver agrees, but
the nun explains she can't have sex with a married
man because it would be a sin. The bus driver says
no problem, he's not married. The nun says she
also has to die a virgin, so they would have to
have anal sex. The bus driver agrees again, and
being the only two people on the bus, they go in
the back and take care of business.....

When they were done and he had resumed driving,
the bus driver said, "Sister, I have a confession
to make, I'm married and have three kids."

The nun replies, "That's O.K. I need to confess,
too. My name is John Mackey and I'm on my way
to a costume party."

The best way to install a ground "rod" is to not use a rod at all. Purchase a piece of sheet copper about 8-10" wide and 10' long. It will probably cost you more than a rod, but it is worth it. Attach your ground wire to the copper. Dig a trench long enough to accept the piece of copper, and deep enough to be below the frost line. The trench can slope downwards. Put a layer of clay or bentonite (sp?) in the bottom, put the copper on top of it, and a layer of clay or bentonite on top. Refill the trench. The point is that a ground does not need to be deep, but it does need to be below the frost line. It does need to make good contact with the ground and with as much surface area as possible.

I have a Bearcat BC200 XLT handheld scanner that has been modded for
cellular. It comes with the scanner, AC adaptor/charger, ni-cad
pack, rubber duck antenna, and a leather case. $150 takes it.
Please contact me at 818-882-0101 after 6PM PST or email me at
jerw@usa.net
Buyer must prepay if shipped, or pick up in person.
I am in Canoga Park, CA (near Los Angeles).
Thank you.

Actually it was a 10 foot ground rod, but we all learned that 10 feet
deep is a hell of allot better!

Thank you for a very informative thread.

I just bought a BC235XLT from the Uniden Internet Store for $150.

I wish I had known this beforehand. I asked every other question I could think of.

I understand the BC235XLT is a great scanner for functions, freqs and the $150 price tag. Anyone want to comment?

Karl

Saw a picture in the newspaper of some pig hunters tracking their dog with a yagi with about 6-12 inch elements and some type of receiver mounted at the base, didn't really look like a scanner. Has anyone ever seen anything like this commercially, or was it homebrewed.

Interesting thought. RS does seem to discontinue scanners on a regular basis, so it's possible nothing special was going on. But I prefer your theory.

After I read the mod description, I took a quick look at the schematic. *Very* quick. Four wires on that connector go to things labled Ch1, Ch2, Ch3 and Ch4. This mod swaps two of them. Didn't have time to read what the pin names on the IC were. Quick guess is that these are external components that work with the CPU to set channel frequencies. Swapping red and black changes the mapping between the frequency the CPU thinks it's setting and what it actually does.

This may be hogwash; based on just a very quick look just before I headed out on a road trip. I'll take a closer look when I get home. I assume everybody else with a 64 and a service manual is doing that now, anyway.

The red/black swap isn't useful, since it maps into frequencies you shouldn't listen to. I wonder if swapping other leads would bring in other frequencies. I'd enjoy getting broadcast FM and aviation frequencies below 380 MHz.

They corrode and resistance builds up at the connection reducing the effectiveness of the ground.

Better off using the method below .
